SO'Z BOSHI

Oliy texnika o'quv yurtlarida ta'lif olayotgan talabalarni keng miqyosda bilimli bakalavr mutaxassis qilib etishtirishning asosiy omillaridan biri oliy matematika fanini chuqur o'rganishdadir. Shuning bilan bir qatorda oliy texnika o'quv yurtlari uchun oliy matematika fani bo'yicha ajratilgan ma'ruza va amaliy darslar soati kam miqdorda bo'lganligi tufayli ularning chuqur bilim olishlari uchun mustaqil ish bajarish jarayonining ahamiyati juda xam kattadir. Oliy matematikadan o'zbek tilida oliy texnika o'quv yurtlari uchun talabalarning mustaqil ish bajarishlariga mo'ljallab yozilgan adabiyot va o'quv qo'llanmalar deyarli yo'q bo'lganligi uchun, talabalar oliy matematikadan mustaqil ish bajarish jarayonida katta qiyinchiliklarga duch kelishadi. Shu boisdan mazkur qo'llanma katta ahamiyat kasb etishi bilan bir qatorda, talabalar uchun oliy matematikanik mustaqil yozma ish topshiriqlarini bajarib o'rganishda yaqindan yordam beradi.

Mazkur qo'llanma bakalavr muxandislar tayyorlash ta'lif va bilimlar sohasi yo'naliishi bo'yicha davlat standartiga mos kelishi bilan bir qatorda bu qo'llanma bakalavr mutaxassisligi bo'yicha «Oliy matematika» rejasiga yozilgan. Bu o'quv qo'llanmada oliy texnika o'quv yurtlari talabalari uchun qisqacha nazariy ma'lumotlar va yozma ish topshiriqlari keltirilgan bo'lib, undan tashqari ko'rsatma sifatida har bir yozma ishidan bittadan variantning yechimi namunasi ko'rsatilgan.

Holisona taqriz va yo'l qo'yilgan kamchiliklarni ko'rsatganlari uchun Mirza Ulug'bek nomidagi O'zbekiston Milliy Universiteti, mexanika-matematika fakultetining «Ehtimollar nazariyasi va matematik statistika» kafedrasi dotsenti A. Djamirzaevga, «Matematik analiz» kafedrasi dotsentlari B. Shoimqulovga, N. Sultonovga, «Geometriya va matematika tarixi» kafedrasi mudiri prof. A. Narmanovga, katta o'qituvchi F. Ibragimovga, A.R.Beruniy nomidagi Toshkent

Davlat Texnika universiteti «Oliy matematika» kafedrasi dotsenti Sh.I.Tojieyvga, O'zbekiston Fanlar Akademiyasi matematika instituti katta ilmiy xodimi, fizika - matematika fanlari nomzodi O. Sh. Sharipovga mualliflar o'zlarining samimiy minnatdorchiliklarini bildiradilar.

Mazkur qo'llanma, albatta, kamchiliklardan xoli emas, shu sababdan mualliflar qo'llanmani yanada takomillashtirishga qaratilgan fikr-mulohazalarni minnatdorchilik bilan qabul qiladilar.

Mualliflar

I BOB. NAZARIY MA'LUMOTLAR

1-§. CHIZIQLI ALGEBRA VA ANALITIK GEOMETRIYA

Ikkinchi tartibli determinantlar va chiziqli tenglamalar sistemasi

$\begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}$ – jadvalga mos ikkinchi tartibli determinant

$$\begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix} = a_1 b_2 - a_2 b_1$$

tenglik bilan aniqlanadi. Ikki noma'lumli ikkita chiziqli tenglamalar sistemasida

$$\begin{cases} a_1 x + b_1 y = c_1 \\ a_2 x + b_2 y = c_2 \end{cases}$$

uning asosiy determinantni $D = \begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix} \neq 0$ bo'lsa, u yagona yechimiga ega bo'lib, yechim Kramer formulalaridan topiladi:

$$x = \frac{D_x}{D} = \frac{\begin{vmatrix} c_1 & b_1 \\ c_2 & b_2 \end{vmatrix}}{\begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}}, \quad y = \frac{D_y}{D} = \frac{\begin{vmatrix} a_1 & c_1 \\ a_2 & c_2 \end{vmatrix}}{\begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}}$$

Agar $D=0$ bo'lsa, sistema yoki birligalikda emas (D_x, D_y larning kamida bittasi noldan farqli), yoki cheksiz ko'p yechimiga ega ($D_x = D_y = 0$).

Uchinchi tartibli determinant va chiziqli tenglamalar sistemasi

$\begin{pmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{pmatrix}$ elementlar jadvaliga mos uchinchi tartibli determinant

$$\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} = a_1 b_2 c_3 + a_2 b_3 c_1 + a_3 b_1 c_2 - a_3 b_2 c_1 - a_1 b_3 c_2 - a_2 b_1 c_3$$

tenglik bilan aniqlanadi.

Uchinchi tartibli determinantning berilgan elementini o'z ichiga olgan yo'l va ustunni o'chirishdan hosil bo'lgan ikkinchi tartibli determinantga uchinchi tartibli determinantning berilgan elementining minori deb ataladi. Minorning $(-1)^k$ ga ko'paytmasi berilgan elementning algebraik to'ldiruvchisi deyiladi. (k - berilgan elementni o'z ichiga olgan yo'l va ustun nomerlari yig'indisi). Shunday qilib, determinantning

elementiga mos minor ishorasi quyidagi $\begin{vmatrix} + & - & + \\ - & + & - \\ + & - & + \end{vmatrix}$ jadval bilan aniqlanadi.

1-TEOREMA

Uchinchi tartibli determinant ixtiyoriy yo'l (ustun) elementlarini o'z algebraik to'ldiruvchilariga ko'paytmalarining yig'indisiga teng

Bu teorema determinantni ixtiyoriy yo'l elementlari bo'yicha yoyib, uning qiymatini hisoblashga yordam beradi.

Determinantning xossalari:

1. Agar determinantning yo'llarini ustunlari bilan yoki ustunlarini yo'llari bilan almashirsak, determinantning qiymati o'zgarmaydi.

2. Determinantning biror yo'lidagi yoki ustunidagi elementlari umumiy ko'paytuvchiga ega bo'lsa, uni determinantning tashqarisiga chiqarish mumkin.

3. Determinantning biror yo'l elementlari boshqa yo'l elementlariga teng bo'lsa, unday determinant nolga teng.

4. Agar determinantning ikkita yo'lining o'tmini almashtirsak, uning ishorasi teskarisiga o'zgaradi.

5. Agar determinantning biror yo'l elementlariga boshqa yo'l elementlarini noldan farqli songa ko'paytirib qo'shsak, uning qiymati o'zgarmaydi.

Uch noma'lumli uchta chiziqli tenglamalar sistemasida

$$\begin{cases} a_1x + b_1y + c_1z = d_1 \\ a_2x + b_2y + c_2z = d_2 \\ a_3x + b_3y + c_3z = d_3 \end{cases}$$

uning asosiy determinanti

$$D = \begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix} \neq 0 \text{ bo'lsa, u yagona yechimga ega}$$

bo'lib, yechimni quyidagi Kramer formulalaridan foydalanib topiladi:

$$x = D_x / D, y = D_y / D, z = D_z / D,$$

Bu erda,

$$D_x = \begin{vmatrix} d_1 & b_1 & c_1 \\ d_2 & b_2 & c_2 \\ d_3 & b_3 & c_3 \end{vmatrix}, D_y = \begin{vmatrix} a_1 & d_1 & c_1 \\ a_2 & d_2 & c_2 \\ a_3 & d_3 & c_3 \end{vmatrix}, D_z = \begin{vmatrix} a_1 & b_1 & d_1 \\ a_2 & b_2 & d_2 \\ a_3 & b_3 & d_3 \end{vmatrix}$$

Agar $D=0$ bo'lsa, sistema yoki birlgilikda emas (D_x, D_y, D_z larning kamida bittasi noldan farqli), yoki cheksiz ko'p yechimga ega ($D_x = D_y = D_z = 0$).

Agar bir jinsli sistema

$$\begin{cases} a_1x + b_1y + c_1z = 0 \\ a_2x + b_2y + c_2z = 0 \\ a_3x + b_3y + c_3z = 0 \end{cases}$$

ning determinantini noldan farqli bo'lsa, u yagona $x=0, y=0, z=0$ yechimga ega bo'ladi. Agar bir jinsli sistemaning determinantini nolga teng bo'lsa, sistema ikkita tenglamaga yoki bitta tenglamaga keladi. Agar sistemaning minorlaridan kamida biri noldan farqli bo'lsa, birinchi xol, hamma minorlar nol bo'lsa, ikkinchi hol ro'y beradi. Bu ikki holda ham sistema cheksiz ko'p yechimlarga ega bo'ladi.

n-nchi tartibli determinant

$$\begin{vmatrix} a_{11} & a_{12} & a_{13} & a_{14} \\ a_{21} & a_{22} & a_{23} & a_{24} \\ a_{31} & a_{32} & a_{33} & a_{34} \\ a_{41} & a_{42} & a_{43} & a_{44} \end{vmatrix}$$

elementlar jadvaliga mos keluvchi 4-tartibli determinant

$$\begin{vmatrix} a_{11} & a_{12} & a_{13} & a_{14} \\ a_{21} & a_{22} & a_{23} & a_{24} \\ a_{31} & a_{32} & a_{33} & a_{34} \\ a_{41} & a_{42} & a_{43} & a_{44} \end{vmatrix} = a_{11} \cdot \begin{vmatrix} a_{22} & a_{23} & a_{24} \\ a_{32} & a_{33} & a_{34} \\ a_{42} & a_{43} & a_{44} \end{vmatrix} - a_{12} \cdot \begin{vmatrix} a_{21} & a_{23} & a_{24} \\ a_{31} & a_{33} & a_{34} \\ a_{41} & a_{43} & a_{44} \end{vmatrix} +$$

$$+ a_{13} \cdot \begin{vmatrix} a_{21} & a_{22} & a_{24} \\ a_{31} & a_{32} & a_{34} \\ a_{41} & a_{42} & a_{44} \end{vmatrix} - a_{14} \cdot \begin{vmatrix} a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \\ a_{41} & a_{42} & a_{43} \end{vmatrix}$$

tenglik bilan aniqlanadi. Xuddi shuning kabi, 5-tartibli va hokazo tartibli determinant tushunchasini kiritish mumkin.

Ixtiyoriy tartibli determinantlar ucun, 3-tartibli determinantlarda kiritilgan algebraik to'ldiruvchilar haqidagi teorema va biror elementning minor hamda algebraik to'ldiruvchisi ta'rifsi o'zgarmasdan qoladi. Shunday qilib, A_{ik} elementning minorini M_{ik} , algebraik to'ldiruvchisini A_{ik} bilan belgilab,

$$A_{ik} = (-1)^{i+k} M_{ik}$$

ga ega bo'lamiz.

D n-nchi tartibli determinant bo'lsin. Uni avval i-nchi yo'lning elementlari bo'yicha, so'ngra k-nchi ustunning elementlari bo'yicha yoyib, 1-teoremaga asosan,

$$D = a_{11}A_{11} + a_{12}A_{12} + \dots + a_{1n}A_{1n}$$

$$D = a_{1k}A_{1k} + a_{2k}A_{2k} + \dots + a_{nk}A_{nk}$$

ga ega bo'lamiz.

Ikkinchchi va uchinchi tartibli determinantlarning xossalari ixtiyoriy tartibli determinantlar uchun O'rinnlidir.

$$\begin{cases} a_{11}x_1 + a_{12}x_2 + \dots + a_{1n}x_n = b_1 \\ a_{21}x_1 + a_{22}x_2 + \dots + a_{2n}x_n = b_2 \\ \dots \\ a_{n1}x_1 + a_{n2}x_2 + \dots + a_{nn}x_n = b_n \end{cases}$$

sistemaning determinanti

$$D = \begin{vmatrix} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ \dots & \dots & \dots & \dots \\ a_{n1} & a_{n2} & \dots & a_{nn} \end{vmatrix} \neq 0$$

bo'lsa, uning yechimlari $x_1 = \frac{D_1}{D}$, $x_2 = \frac{D_2}{D}$, ..., $x_n = \frac{D_n}{D}$

formulalardan topiladi. Bu formulalarda D – sistemaning determinant, D_k , ($k = 1, 2, \dots, n$) sistemaning determinantida k-nchi tartibli ustunni (aniqlanadigan noma'lumlar oldidagi

koeffitsientlar ustuni) ozod ustuni bilan almashtirishdan hosil bo'ligan:

$$D_k = \begin{vmatrix} a_{11} & a_{12} & \dots & a_{1,k-1} & b_1 & a_{1,k+1} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2,k-1} & b_2 & a_{2,k+1} & \dots & a_{2n} \\ \dots & \dots \\ a_{n1} & a_{n2} & \dots & a_{n,k-1} & b_n & a_{n,k+1} & \dots & a_{nn} \end{vmatrix}$$

determinant. Agar $D = 0$ bo'lsa, sistema yoki birlgalikda emas (D_1, D_2, \dots, D_n larning kamida bittasi noldan farqli), yoki cheksiz ko'p yechimga ega ($D_1 = D_2 = \dots = D_n = 0$).

To'g'ri chiziqdagi koordinatalar

x absissaga ega bo'lgan OX koordinata o'qining M nuqtasi $M(x)$ bilan belgilanadi. $M_1(x_1)$ va $M_2(x_2)$ nuqtalar orasidagi masofa $d = |x_2 - x_1|$ formula bilan aniqlanadi.

Ixtiyoriy to'g'ri chiziqdagi AB (A-kesmaning boshi, B-oxiri) kesma berilgan bo'lsin: u holda bu to'g'ri chiziqning ixtiyoriy C nuqtasi AB kesmani qandaydir λ nisbatda bo'ladi, bu erda $\lambda = \pm |AC| : |CB|$. Agar AC, CB kesmalar bir tomonqa qarab yo'nalgan bo'lsa, "+" ishora, qarama-qarshi tomonqa yo'nalgan bo'lsa "-" ishora olinadi. Boshqacha qilib aytganda, agar C nuqta A va B nuqtalar orasida yotsa, λ musbat, tashqarida yotsa, manfiy bo'ladi.

Agar A va B nuqtalar OX o'qida yotsa, $A(x_1)$ va $B(x_2)$ nuqtalarni λ nisbatda bo'luvchi $C(\bar{x})$ nuqtaning koordinatalari

$$\bar{x} = \frac{x_1 + \lambda x_2}{1 + \lambda}$$

formula bilan aniqlanadi. Hususiy holda, agar $\lambda=1$ bo'lsa, kesma o'rtasining koordinatalari uchun

$$\bar{x} = \frac{x_1 + x_2}{2}$$

formula kelib chiqadi.

Tekislikdagi to'g'ri burchakli koordinatalar

Agar berilgan tekislikda XOY dekart koordinatalar sistemasi berilgan bo'lsa, x, y kordinataga ega bo'lgan M nuqtani M(x,y) bilan belgilaymiz.

$M_1(x_1, y_1)$, $M_2(x_2, y_2)$ nuqtalar orasidagi masofa

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

formula bilan hisoblanadi. Xususiy holda koordinata boshidan M(x,y) nuqtagacha bo'lgan masofa

$$d = \sqrt{x^2 + y^2}$$

formula bilan aniqlanadi.

$A(x_1, y_1)$, $B(x_2, y_2)$ nuqtalar orasidagi kesmani berilgan λ nisbatda bo'luvchi C(x, y) nuqtaning koordinatalari

$$\bar{x} = \frac{x_1 + \lambda x_2}{1 + \lambda}; \quad \bar{y} = \frac{y_1 + \lambda y_2}{1 + \lambda}$$

formulalar bilan aniqlanadi.

Xususiy holda, $\lambda=1$ bo'lganda, kesma o'rta sinining koordinatalari:

$$\bar{x} = \frac{x_1 + x_2}{2}, \quad \bar{y} = \frac{y_1 + y_2}{2}$$

Uchlarining koordinatalari A(x₁, y₁), B(x₂, y₂), C(x₃, y₃) bo'lgan uchburchak yuzasi

$$C = \frac{1}{2} \cdot |x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)| =$$

$$\frac{1}{2} \cdot |(x_2 - x_1)(y_3 - y_1) + (x_3 - x_1)(y_2 - y_1)|$$

formula yordamida topiladi.

$$\text{Uchburchak yuzasi } C = \frac{1}{2} \Delta$$

formula bilan hisoblanadi (bu erda, $\Delta = \begin{vmatrix} 1 & 1 & 1 \\ x_1 & x_2 & x_3 \\ y_1 & y_2 & y_3 \end{vmatrix}$).

Qutb koordinatalari

Qutb koordinatalarda M nuqtaning O'rnini uning O qutbdan masofasi $|OM| = \rho$ (ρ - nuqtaning qutb radiusi - vektori) va OM kesmaning qutb O'qi OX bilan tashkil qilgan burchagi θ (θ - nuqtaning qutb burchagi) bilan aniqlanadi. Qutb o'qidan soat strelkasiga qarama - qarshi olingan θ burchak musbat hisoblanadi. Agar M nuqta qutb koordinatalariga ega bo'lsa ($\rho > 0$, $0 \leq \theta < 2\pi$), unga cheksiz ko'p (ρ , $\theta + 2k\pi$), qutb koordinatlari jufti to'g'ri keladi, $k \in \mathbb{Z}$.

Agar dekart koordinatalar sistemasining koordinata boshini qutba qo'yib, OX o'qini qutb O'qi bo'yicha yo'naltirsak, u holda M nuqtaning to'g'ri burchakli (x,y) koordinatalari bilan (ρ, θ) qutb koordinatalari o'rta sida bog'lanish quyidagi:

$$x = \rho \cos \theta, \quad y = \rho \sin \theta;$$

$$\rho = \sqrt{x^2 + y^2}, \quad \operatorname{tg} \theta = \frac{y}{x}$$

formulalar bilan aniqlanadi.

Fazodagi to'g'ri burchakli koordinatalar

Agar fazoda OXYZ to'g'ri burchakli dekart koordinatalar sistemasi berilgan bo'lsa, u holda koordinatalari x (absissa), y (ordinata) va z (aplikata) bo'lgan M nuqta M(x, y, z) bilan belgilanadi. A(x₁, y₁, z₁) va B(x₂, y₂, z₂) nuqtalar orasidagi masofa

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}$$

formula bilan aniqlanadi.

M(x, y, z) nuqtadan koordinata boshigacha bo'lgan masofa

$$d = \sqrt{x^2 + y^2 + z^2}$$

formula bilan topiladi.

Agar uchlari A(x₁, y₁, z₁) va B(x₂, y₂, z₂) bo'lgan kesma C(x̄, ȳ, z̄) nuqta orqali λ nisbatda bo'lingan bo'lsa, C nuqtaning koordinatalari

$$\bar{x} = \frac{x_1 + \lambda x_2}{1 + \lambda}; \quad \bar{y} = \frac{y_1 + \lambda y_2}{1 + \lambda}; \quad \bar{z} = \frac{z_1 + \lambda z_2}{1 + \lambda}$$

tengliklardan topiladi.

Kesma o'rtasining koordinatalari

$$\bar{x} = \frac{x_1 + x_2}{2}; \quad \bar{y} = \frac{y_1 + y_2}{2}; \quad \bar{z} = \frac{z_1 + z_2}{2}$$

formulalar bilan topiladi.

Vektorlar va ular ustida amallar

OXYZ koordinatlar sistemasida berilgan \bar{a} vektorni $\bar{a} = a_x \cdot \bar{i} + a_y \cdot \bar{j} + a_z \cdot \bar{k}$ ko'rinishida tasvirlash mumkin. \bar{a} vektorni bunday tasvirlash uni koordinata o'qlari yoki ortlar bo'yicha yoyish deb ataladi. Bu erda a_x, a_y, a_z lar \bar{a} vektorning mos o'qlardagi proeksiyalari (\bar{a} vektorning koordinatalari) deyiladi, $\bar{i}, \bar{j}, \bar{k}$ lar esa, o'qlarning ortlari (mos o'qlarning musbat yo'nalishi bilan ustma-ust tushgan birlik vektorlar).

$a_x \bar{i}, a_y \bar{j}, a_z \bar{k}$ lar \bar{a} vektorning koordinat o'qlari bo'yicha tashkil etuvchilari (komponentalari) deb ataladi. \bar{a} vektorning kattaligi $|\bar{a}|$ bilan belgilanib, $|\bar{a}| = \sqrt{a_x^2 + a_y^2 + a_z^2}$ formuladan topiladi.

\bar{a} vektorning yo'nalishi uning koordinata o'qlari bilan tashkil qilgan α, β, γ burchaklar orqali belgilanadi. Bu burchaklarning kosinuslari (vektorning yo'naltiruvchi kosinuslari)

$$\cos \alpha = \frac{a_x}{|\bar{a}|} = \frac{a_x}{\sqrt{a_x^2 + a_y^2 + a_z^2}}; \quad \cos \beta = \frac{a_y}{|\bar{a}|} = \frac{a_y}{\sqrt{a_x^2 + a_y^2 + a_z^2}};$$

$$\cos \gamma = \frac{a_z}{|\bar{a}|} = \frac{a_z}{\sqrt{a_x^2 + a_y^2 + a_z^2}}$$

formulalardan aniqlanadi.

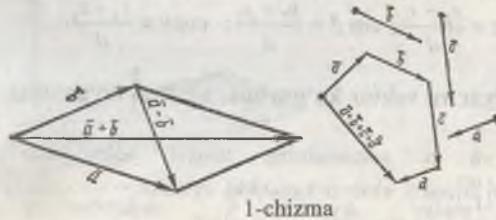

Vektoming yo'naltiruvchi kosinuslari $\cos^2 \alpha + \cos^2 \beta + \cos^2 \gamma = 1$ munosabat bilan bog'langan. Agar \bar{a} va \bar{b} vektorlar ortlar bo'yicha yoyilmasi bilan berilgan bo'lsa, ularning yig'indisi va ayirmasi

$$\bar{a} + \bar{b} = (a_x + b_x) \cdot \bar{i} + (a_y + b_y) \cdot \bar{j} + (a_z + b_z) \cdot \bar{k}$$

$$\bar{a} - \bar{b} = (a_x - b_x) \cdot \bar{i} + (a_y - b_y) \cdot \bar{j} + (a_z - b_z) \cdot \bar{k}$$

formulalardan aniqlanadi.

Boshlari ustma-ust tushadigan \bar{a} va \bar{b} vektorlar yig'indisi tomonlari \bar{a} va \bar{b} bo'lgan parallelogram diagonali bilan ustma-ust tushadigan vektor orqali tasvirlanadi. $\bar{a} - \bar{b}$ ayirma shu parallelogramning ikkinchi diagonali bilan ustma-ust tushib, vektoring boshi \bar{b} ning oxirida, oxiri \bar{a} ning oxirida yotadi.

1-chizma

Ixtiyoriy sondagi vektorlar yig'indisi ko'pburchaklar qoidasi bo'yicha topiladi. \bar{a} vektorni m skalyarga ko'paytmasi $m \cdot \bar{a} = m \cdot a_x \cdot \bar{i} + m \cdot a_y \cdot \bar{j} + m \cdot a_z \cdot \bar{k}$ formuladan topiladi. Agar $m > 0$ bo'lsa, \bar{a} va $m\bar{a}$ vektorlar parallel (kollineyar) va bir tomoniga yo'nalgan, $m < 0$ bo'lsa, qarama-qarshi tomoniga yo'nalgan bo'ladi. Agar $m = \frac{1}{|\bar{a}|}$ bo'lsa, $\frac{\bar{a}}{|\bar{a}|}$

vektor uzunligi birga teng bo'lib, yo'nalishi \bar{a} ning yo'nalishi bilan ustma-ust tushadi. Bu vektor \bar{a} vektorning birlik vektori (ort) deyilib, \bar{a}_0 bilan belgilanadi. \bar{a} vektor yo'nalishidagi birlik vektorni topish

\bar{a} vektorni normallashtirish deyiladi. Shunday qilib, $\bar{a}_0 = \frac{\bar{a}}{|\bar{a}|}$, yoki $\bar{a} = |\bar{a}| \cdot \bar{a}_0$. Boshi A(x₁, y₁, z₁), oxiri B(x₂, y₂, z₂) nuqtada yotgan \overline{AB} vektor $\overline{AB} = (x_2 - x_1)\bar{i} + (y_2 - y_1)\bar{j} + (z_2 - z_1)\bar{k}$ ko'rinishda bo'ladi. Uning uzunligi A va B nuqtalar orasidagi masofaga teng:

$$|\overline{AB}| = d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}$$

\overline{AB} vektorning yo'nalishi quyidagi yo'naltiruvchi kosinuslar bilan aniqlanadi:

$$\cos \alpha = \frac{x_2 - x_1}{d}; \quad \cos \beta = \frac{y_2 - y_1}{d}; \quad \cos \gamma = \frac{z_2 - z_1}{d}$$

Skalyar va vektor ko'paytma, aralash ko'paytma

\bar{a} va \bar{b} vektorlarning skalyar ko'paytmasi deb $\bar{a} \cdot \bar{b} = |\bar{a}| |\bar{b}| \cos \phi$ skalyar kattalikka aytamiz.

Skalyar ko'paytmaning xossalari:

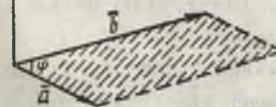

1. $\bar{a} \cdot \bar{a} = |\bar{a}|^2$ yoki $\bar{a}^2 = |\bar{a}|^2$;
2. $\bar{a} \perp \bar{b}$ (noldan farqli vektorlar ortogonalligi) bo'lsa, $\bar{a} \cdot \bar{b} = 0$ va aksincha;
3. $\bar{a} \cdot \bar{b} = \bar{b} \cdot \bar{a}$ (o'rinn almashtirish qonuni);
4. $\bar{a}(\bar{b} + \bar{c}) = \bar{a}\bar{b} + \bar{a}\bar{c}$ (taqsimot qonuni);
5. $(m\bar{a})\bar{b} = \bar{a}(m\bar{b}) = m(\bar{a}\bar{b})$ (skalyar ko'paytuvchiga nisbatan guruhlash qonuni).

$\bar{a} = a_x \bar{i} + a_y \bar{j} + a_z \bar{k}$, $\bar{b} = b_x \bar{i} + b_y \bar{j} + b_z \bar{k}$ lar berilgan bo'lsa, ularning skalyar ko'paytmasi $\bar{a}\bar{b} = a_x b_x + a_y b_y + a_z b_z$ formuladan topiladi.

a vektorning b vektorga vektor ko'paytmasi deb shunday c vektorga aytamizki, u quyidagi shartlarni qanoatlantirsin:

1. c ning kattaligi a va b vektorlardan yasalgan parallelogramning yuziga teng ($|c| = |\bar{a}||\bar{b}|\sin \varphi$, $\varphi = \bar{a} \wedge \bar{b}$);
2. c vektor a va b vektorlarga perpendikulyar;
3. a, b, c vektorlar bitta nuqtaga keltirilgandan so'ng O'ng sistemani tashkil etsin. (a, b, c vektorlar O'ng sistemani tashkil etadi deyiladi, agar a dan b ga va c ga o'tish soat strelkasi harakatiga teskari yo'nalgan bo'lsa).

$$\bar{c} = \bar{a} \times \bar{b}$$

a vektorning b vektorga vektor ko'paytmasi $a \times b$ ko'rinishda yoziladi.

Vektor ko'paytmaning xossalari:

1. $\bar{b} \times \bar{a} = -\bar{a} \times \bar{b}$, o'rinn almashtirish xossasiga ega emas;
 2. agar $\bar{a} = 0$, yoki $\bar{b} = 0$, yoki $\bar{a} \parallel \bar{b}$ bo'lsa, $\bar{a} \times \bar{b} = 0$ bo'ladi;
 3. $(m\bar{a}) \times \bar{b} = \bar{a} \times (m\bar{b}) = m(\bar{a} \times \bar{b})$ (skalyar ko'paytuvchiga nisbatan guruhlash qonuni);
 4. $\bar{a} \times (\bar{b} + \bar{c}) = \bar{a} \times \bar{b} + \bar{a} \times \bar{c}$ (taqsimot qonuni).
- $\bar{a} = x_1 \bar{i} + y_1 \bar{j} + z_1 \bar{k}$, $\bar{b} = x_2 \bar{i} + y_2 \bar{j} + z_2 \bar{k}$ vektorlarning vektor ko'paytmasi

БИБЛИОТЕКА
Библиотека
№ 4149

$$\bar{a} \times \bar{b} = \begin{vmatrix} i & j & k \\ x_1 & y_1 & z_1 \\ x_2 & y_2 & z_2 \end{vmatrix}$$

formula yordamida topiladi.

Uchta $\bar{a}, \bar{b}, \bar{c}$ vektorming aralash ko'paytmasi $\bar{a} \times \bar{b}$ ni \bar{c} ga skalyar ko'paytmasiga teng, ya'ni $(\bar{a} \times \bar{b}) \cdot \bar{c}$. Aralash ko'paytmaning moduli shu vektorlarga qurilgan parallelepipedning hajmiga teng. Aralash ko'paytmaning xossalari:

1. Agar:

- a) ko'paytiriluvchi vektorlardan biri nolga teng;
- b) ikkitasi kolleniar;
- v) uchta noldan farqli vektor bitta tekislikka parallel (komplanar) bo'lsa, aralash ko'paytma nolga teng.

2. Agar aralash ko'paytmada vektor ko'paytma va skalyar ko'paytmalarining o'rmini almashtirsak aralash ko'paytma o'zgarmaydi, ya'ni $(\bar{a} \times \bar{b}) \cdot \bar{c} = \bar{a} \cdot (\bar{b} \times \bar{c})$, shuni hisobga olib, aralash ko'paytma \bar{abc} kabi yoziladi.

3. Agar ko'paytiriladigan vektorlar o'rmini doiraviy shaklda almashtirsak, ko'paytma o'zgarmaydi: $\bar{abc} = \bar{bca} = \bar{cab}$.

4. Ixtiyoriy ikkita vektor o'rmini almashtirsak, aralash ko'paytmaning ishorasi o'zgaradi.

$$\bar{bac} = -\bar{abc}; \quad \bar{cba} = -\bar{abc}; \quad \bar{acb} = -\bar{abc}.$$

$$\bar{a} = x_1 \bar{i} + y_1 \bar{j} + z_1 \bar{k}; \quad \bar{b} = x_2 \bar{i} + y_2 \bar{j} + z_2 \bar{k}; \quad \bar{c} = x_3 \bar{i} + y_3 \bar{j} + z_3 \bar{k}$$

vektorlarning aralash ko'paytmasi

$$\bar{abc} = \begin{vmatrix} x_1 & y_1 & z_1 \\ x_2 & y_2 & z_2 \\ x_3 & y_3 & z_3 \end{vmatrix}$$

Aralash ko'paytmaning xossalardan quydagi kelib chiqadi: uch vektor komplanarlighining zarur va yetarli sharti $\bar{abc} = 0$ dir. $\bar{a}, \bar{b}, \bar{c}$ lardan qurilgan parallelepiped najmi

$$V_1 = |\bar{abc}|, \quad \text{uchburchakli piramidaning hajmi}$$

$$V_2 = \frac{1}{6} V_1 = \frac{1}{6} |\bar{abc}| \text{ ga teng.}$$

Matritsalar va ular ustida amallar

$$\begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}$$

lar mos ravishda 2 va 3-tartibli kvadrat matritsa deyiladi. Ko'p ta'riflarni umumlashtirish uchun ularni 3-tartibli matritsa tichun beriladi. Ularni 2-tartibli matritsa uchun qo'llash qiyinchilik tug'dirmaydi. Agar kvadrat matritsaning elementlari $a_{mn} = a_{nm}$ shartni qanoatlantirsa, matritsa simmetrik deyiladi.

$$A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}, \quad B = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}$$

matritsalar teng bo'lishi uchun ixtiyoriy m va n larda $a_{mn} = b_{mn}$ shartning bajarilishi zarur va yetarlidir.

$$\text{Har qanday } A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix} \text{ matritsaga } D_A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}$$

determinantni mos qo'yamiz. Agar $D_A \neq 0$ bo'lsa, u holda, A matritsani xos emas matrisa deb ataymiz.

A, B matritsalar yig'indisi quyidagicha aniqlanadi:

$$(a_{11} a_{12} a_{13} + b_{11} b_{12} b_{13}) + (a_{21} a_{22} a_{23} + b_{21} b_{22} b_{23}) + (a_{31} a_{32} a_{33} + b_{31} b_{32} b_{33}) = a_{11} + b_{11} a_{12} + b_{12} a_{13} + b_{13} + a_{21} + b_{21} a_{22} + b_{22} a_{23} + b_{23} + a_{31} + b_{31} a_{32} + b_{32} a_{33} + b_{33}$$

A matritsani mi soniga ko'paytirishi uchun uning har bir elementini m ga ko'paytiramiz:

$$m \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix} = \begin{pmatrix} ma_{11} & ma_{12} & ma_{13} \\ ma_{21} & ma_{22} & ma_{23} \\ ma_{31} & ma_{32} & ma_{33} \end{pmatrix}$$

A, B matritsalar ko'paytmasi quyidagicha aniqlanadi:

$$AB = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix} \cdot \begin{pmatrix} b_{11} & b_{12} & b_{13} \\ b_{21} & b_{22} & b_{23} \\ b_{31} & b_{32} & b_{33} \end{pmatrix} = \begin{pmatrix} \sum_{j=1}^3 a_{1j}b_{j1} & \sum_{j=1}^3 a_{1j}b_{j2} & \sum_{j=1}^3 a_{1j}b_{j3} \\ \sum_{j=1}^3 a_{2j}b_{j1} & \sum_{j=1}^3 a_{2j}b_{j2} & \sum_{j=1}^3 a_{2j}b_{j3} \\ \sum_{j=1}^3 a_{3j}b_{j1} & \sum_{j=1}^3 a_{3j}b_{j2} & \sum_{j=1}^3 a_{3j}b_{j3} \end{pmatrix}$$

Ko'paytma matritsaning i-nchi yo'l va k-nchi ustunda turuvchi elementi, A matritsa i-nchi yo'lidagi elementlarini B matritsa k-nchi ustunining mos elementlariga ko'paytmalari yig'indisiga teng.

Ikki matritsaning ko'paytmasi umuman o'rin almashtirish xossasiga bo'yusunmaydi. Ikki matritsa ko'paytmasiining determinanti bu matritsalar determinantlari ko'paytmalariga teng. Hamma elementlari nollardan iborat bo'lgan matritsa nol matritsa deyiladi.

$$\begin{pmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix} = 0$$

Bu matritsa uchun: $A+0=A$.

$$E = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix}$$

ni birlik matritsa deyiladi.

Bu matritsan A ga chapdan va o'ngdan ko'paytmasi A ga teng: $EA=AE=A$. Agar $AB=BA=E$ ga teng bo'ssa, B matritsa A-ga teskari matritsa deyiladi. A ga teskari matritsani A^{-1} bilan belgilanadi: $B=A^{-1}$. Har qanday xos emas matritsa teskari matritsaga ega. Teskari matritsa quyidagicha topiladi:

$$A^{-1} = \begin{pmatrix} \frac{A_{11}}{D_A} & \frac{A_{21}}{D_A} & \frac{A_{31}}{D_A} \\ \frac{A_{12}}{D_A} & \frac{A_{22}}{D_A} & \frac{A_{32}}{D_A} \\ \frac{A_{13}}{D_A} & \frac{A_{23}}{D_A} & \frac{A_{33}}{D_A} \end{pmatrix}$$

Bu erda A_{mn} - A matritsa determinantidagi a_{mn} -elementning algebraik to'ldiruvchisidir, ya'ni A_{mn} - A matritsa determinantidagi m -nchi yo'l va n-nchi ustunini o'chirishdan hosil bo'lgan ikkinchi tartibli determinant (minor) bilan $(-1)^{m+n}$ ifoda ko'paytmasidir.

$$X = \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} - ni ustun matritsa deyiladi.$$

AX ko'paytma quyidagicha aniqlanadi:

$$AX = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix} = \begin{pmatrix} a_{11}x_1 + a_{12}x_2 + a_{13}x_3 \\ a_{21}x_1 + a_{22}x_2 + a_{23}x_3 \\ a_{31}x_1 + a_{32}x_2 + a_{33}x_3 \end{pmatrix}$$

$$\begin{cases} a_{11}x_1 + a_{12}x_2 + a_{13}x_3 = b_1 \\ a_{21}x_1 + a_{22}x_2 + a_{23}x_3 = b_2 \\ a_{31}x_1 + a_{32}x_2 + a_{33}x_3 = b_3 \end{cases}$$

sistemani $AX=B$ ko'rinishda yozish mumkin, bu erda,

$$A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}, X = \begin{pmatrix} x_1 \\ x_2 \\ x_3 \end{pmatrix}, B = \begin{pmatrix} b_1 \\ b_2 \\ b_3 \end{pmatrix}$$

Bu sistemaning yechimi $X = A^{-1} \cdot B$ ($D_A \neq 0$) bo'ladi.

$$\begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix}$$

matritsaning xarakteristik tenglamasi

$$\begin{vmatrix} a_{11}-\lambda & a_{12} & a_{13} \\ a_{21} & a_{22}-\lambda & a_{23} \\ a_{31} & a_{32} & a_{33}-\lambda \end{vmatrix} = 0.$$

Bu tenglamaning ildizlari $\lambda_1, \lambda_2, \lambda_3$ lar matritsaning xos sonlari deyiladi. Bu xos sonlarga mos keluvchi xos vektorlarning koordinatalari quyidagi:

$$\begin{cases} (a_{11}-\lambda)\zeta_1 + a_{12}\zeta_2 + a_{13}\zeta_3 = 0 \\ a_{21}\zeta_1 + (a_{22}-\lambda)\zeta_2 + a_{23}\zeta_3 = 0 \\ a_{31}\zeta_1 + a_{32}\zeta_2 + (a_{33}-\lambda)\zeta_3 = 0 \end{cases}$$

tenglamalar sistemasi yechimlaridan iborat bo'ladi.

Matritsaning rangi. Ekvivalent matritsalar

To'g'ri burchakli matritsa berilgan bo'lsin.

$$A = \begin{pmatrix} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \dots & a_{mn} \end{pmatrix}$$

Bu matritsadan ixtiyoriy k-ta yo'l, k-ta ustun ajratamiz ($k \leq m, k \leq n$). A matritsaning ajratilgan yo'l va ustunlarining kesishgan joyida turgan elementlaridan tuzilgan k-nchi tartibli determinant A matritsaning k-nchi tartibli minori deyiladi. A matritsa $C_m^k \cdot C_n^k$ ta k-nchi tartibli minorlarga ega. A matritsaning noldan farqli hamma minorlarini qaraymiz. A matritsaning rangi deb uning noldan farqli minorlarining eng yuqori tartibiga aytamiz. Agar matritsaning hamma elementlari nollardan iborat bo'lsa, uning rangi nolga teng. Tartibi matritsaning rangiga teng bo'lgan noldan farqli har qanday minor matritsaning bazis minori deyiladi. Matritsaning rangini r(A) bilan belgilaymiz. Agar r(A)=r(B) ga teng bo'lsa, A va B lar ekvivalent matritsalar deyiladi va A~B kabi yoziladi. Elementar almashtirishlardan matritsaning rangi o'zgarmaydi.

- Elementar almashtirishlarga quyidagilar kiradi:
1. Matritsaning yo'llarini ustunlar bilan almashtirish.
 2. Matritsaning yo'llarini o'zaro almashtirish.
 3. Hamma elementlari nollardan iborat yo'llarni o'chirish.
 4. Birorta yo'lни noldan farqli songa ko'paytirish.
 5. Biror yo'l elementlariga boshqa yo'lning mos elementlarini qo'shish.

Chiziqli almashtirish

$$\begin{aligned} x &= a_{11}x' + a_{12}y' \\ y &= a_{21}x' + a_{22}y' \end{aligned}$$

tenglik orqali x, y o'zgaruvchilarni x', y' orqali ifodalash mumkin. Bu tenglikni x', y' o'zgaruvchilarni chiziqli almashtirish deyiladi.

$$A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix}$$

jadval qaralayotgan chiziqli almashtirish matritsasi deyiladi.

$$D_A = \begin{vmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{vmatrix}$$

chiziqli almashtirishlarning determinanti deyiladi. Bundan so'ng $D_A \neq 0$ deb qaraladi.

Chiziqli almashtirishni uch o'zgaruvchili deb qarash mumkin:

$$\begin{aligned} x &= a_{11}x' + a_{12}y' + a_{13}z' \\ y &= a_{21}x' + a_{22}y' + a_{23}z' \\ z &= a_{31}x' + a_{32}y' + a_{33}z' \end{aligned}$$

bu erda,

$$A = \begin{pmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{pmatrix} \quad D_A = \begin{vmatrix} a_{11} & a_{12} & a_{13} \\ a_{21} & a_{22} & a_{23} \\ a_{31} & a_{32} & a_{33} \end{vmatrix}$$

lar bu chiziqli almashtirishning mos ravishda matritsa va determinanti deyiladi.

Gauss usuli bilan chiziqli tenglamalar sistemasini echish

Chiziqli algebraik tenglamalarni determinant yordamida echish ikki va uch noma'lumli tenglamalar sistemasi uchun qulay. Tenglamalar soni sistemada ko'p bo'lganda Gauss usuli qulay. Bu usulni 4 noma'lumli 4 ta tenglamalar sistemasida tahlil qilamiz:

$$\begin{cases} a_{11}x + a_{12}y + a_{13}z + a_{14}u = a_{15} & (a) \\ a_{21}x + a_{22}y + a_{23}z + a_{24}u = a_{25} & (b) \\ a_{31}x + a_{32}y + a_{33}z + a_{34}u = a_{35} & (c) \\ a_{41}x + a_{42}y + a_{43}z + a_{44}u = a_{45} & (d) \end{cases}$$

$a_{11} \neq 0$ deb faraz qilamiz, (agar $a_{11} = 0$ bo'lsa, tenglamalarning o'rnnini almashtiramiz).

1-qadam. (a) tenglamani a_{11} ga bo'lib, hosil bo'lgan tenglamani a_{21} ga ko'paytirib (b) dan ayiramiz, so'ngra a_{31} ga ko'paytirib (c) dan ayiramiz, a_{41} ga ko'paytirib (d) dan ayiramiz. Birinchi qadamdan so'ng quyidagi sistemaga kelamiz:

$$\begin{cases} x + b_{12}y + b_{13}z + b_{14}u = b_{15} & (e) \\ b_{22}y + b_{23}z + b_{24}u = b_{25} & (f) \\ b_{32}y + b_{33}z + b_{34}u = b_{35} & (g) \\ b_{42}y + b_{43}z + b_{44}u = b_{45} & (h) \end{cases}$$

b_{ij} ni a_{ij} lardan quyidagi formulalar bo'yicha topiladi:

$$b_{1j} = \frac{a_{1j}}{a_{11}} \quad (j = 2, 3, 4, 5)$$

$$b_{ij} = a_{ij} - a_{11} \cdot b_{1j} \quad (i=2,3,4; j=2,3,4,5).$$

2- qadam. (a), (b), (c), (d) tenglamalarda nima qilgan bo'lsak, (f), (g), (h) larda ham shularni qaytaramiz va hokazo. Natijada berilgan tenglama quyidagi ko'rinishga keladi:

$$\begin{cases} x + b_{12}y + b_{13}z + b_{14}u = b_{15} \\ y + C_{23}z + C_{24}u = C_{25} \\ z + d_{34}u = d_{35} \\ u = e_{45} \end{cases}$$

Hosil bo'lgan sistemadan barcha noma'lumlar ketma-ket topiladi.

Chiziq tenglamasi

XOY tekisligida biror chiziqni nuqtalar to'plami deb qarasak, unga bu chiziqda yotgan ixtiyoriy $M(x, y)$ nuqta koordinatalarini bog'lovchi tenglama to'g'ri keladi. Bunday tenglama berilgan chiziqning tenglamasi deb ataladi. Agar berilgan chiziqning tenglamasiga bu chiziqda yotgan ixtiyoriy nuqtaning koordinatalarini qo'ysak, uni ayniyatga aylantiradi. Chiziqdan tashqaridagi nuqtaning koordinatalari bu chiziq tenglamasini qanoatlantirmaydi.

Chiziqning parametrik tenglamasi

Ba'zida nuqtalar to'plamining tenglamasini tuzishda x , y koordinatalarni qandaydir yordamchi parametr t orqali ifodalash qulay keladi (uni parametr deb ataladi), ya'ni $x = \varphi(t)$, $y = \psi(t)$ tenglamalar sistemasi qaraladi. Izlangan chiziqni bunday tasvirlash parametrik ko'rinish deyilib, tenglamalar sistemasi berilgan chiziqning parametrik tenglamalari deyiladi. Tenglamalar sistemasidan parametr t ni yuqotib, x , y ni bog'lovchi, ya'ni oddiy $f(x, y)=0$ ko'rinishdagi tenglamaga keltiriladi.

To'g'ri chiziqning umumiy tenglamasi

x, y larga nisbatan har qanday birinchi darajali tenglama, ya'ni

$$Ax+By+C=0$$

A, B, C – lar o'zgarmas koeffitsientlar) tenglama tekislikda qandaydir to'g'ri chiziqni aniqlaydi va tekislikdagi har qanday to'g'ri chiziqning tenglamasini 1-darajali $Ax+By+C=0$ tenglama ko'rinishida yozish mumkin. Bu tenglama to'g'ri chiziqning umumiy tenglamasi deb ataladi.

Xususiy hollar:

1. $C=0; A\neq 0; B\neq 0$. $Ax+By=0$ tenglama bilan aniqlanadigan to'g'ri chiziq koordinatalar boshidan o'tadi.
2. $A=0; B\neq 0; C\neq 0$. $By+C=0$ tenglama bilan aniqlanadigan ($y=-C/B$) to'g'ri chiziq OX o'qiga parallel.
3. $B=0; A\neq 0; C\neq 0$. $Ax+C=0$ tenglama bilan aniqlanadigan ($x=-C/A$) to'g'ri chiziq OY o'qiga parallel.
4. $B=C=0; A\neq 0$. $Ax=0$ yoki $x=0$ tenglama bilan aniqlanadigan to'g'ri chiziq OY o'qi bilan ustma-ust tushadi.
5. $A=C=0; B\neq 0$, $By=0$ yoki $y=0$ tenglama bilan aniqlanadigan to'g'ri chiziq OX o'qi bilan ustma-ust tushadi.

To'g'ri chiziqning burchak koeffitsientli tenglamasi

Agar umumiy tenglamada $B\neq 0$ bo'lsa, uni y -ka nisbatan ehib $y=kx+b$ tenglamani hosil qilamiz (bu erda $k=-A/B$, $b=-C/B$). Uni to'g'ri chiziqning burchak koeffitsientli tenglamasi deb atashadi, bu erda, $k = \operatorname{tg} \alpha$, α – to'g'ri chiziq bilan OX o'qining musbat yo'nalishi orasidagi burchak. Tenglamaning ozod hadi b to'g'ri chiziqning OY o'qi bilan kesishgan nuqtasi.

To'g'ri chiziqning kesmalarga nisbatan tenglamasi

Agar to'g'ri chiziqning umumiy tenglamasida $C\neq 0$ bo'lsa, tenglamani – C ga bo'lib,

$$\frac{x}{a} + \frac{y}{b} = 1$$

tenglikga ega bo'lamiz (bu erda, $a=-C/A$, $b=-C/B$). Uni to'g'ri chiziqning kesmalarga nisbatan tenglamasi deb atashadi; bunda, $a -$ to'g'ri chiziqning OX o'qi, $b -$ esa OY o'qi bilan kesishish nuqtasi. Shuning uchun, a, b larga to'g'ri chiziqning o'qlardagi kesmalari deyiladi.

To'g'ri chiziqning normal tenglamasi

Agar to'g'ri chiziqning umumiy tenglamasining ikki tomonini $\mu = 1/\pm \sqrt{A^2 + B^2}$ ga ko'paytirsak (μ -normallashtiruvchi ko'paytuvchi, ildiz oldidagi ishorani shunday tanfaymizki, $\mu C < 0$ bo'lsin)

$$x \cos \varphi + y \sin \varphi - P = 0$$

ga ega bo'lamiz. Bu tenglikka to'g'ri chiziqning normal tenglamasi deyiladi. Bu erda P koordinatalar boshidan to'g'ri chiziqqa tushirilgan perpendikulyarning uzunligi, φ -perpendikulyar bilan OX o'qining musbat yunalishi orasidagi burchak.

To'g'ri chiziqlar orasidagi burchak. Ikki nuqtadan o'tuvchi to'g'ri chiziq tenglamasi

$y=k_1x+b_1, y=k_2x+b_2$ to'g'ri chiziqlar orasidagi burchak

$$\operatorname{tg} \alpha = \left| \frac{k_2 - k_1}{1 + k_1 k_2} \right|$$

formula bilan aniqlanadi. $k_1 = k_2$ ikki chiziqning paralellik sharti. $k_1 = -1/k_2$ ikki to'g'ri chiziqning perpendikulyarlik sharti. k burchak koeffitsientli va $M(x_1, y_1)$ nuqtadan o'tuvchi to'g'ri chiziq tenglamasi quyidagi:

$y - y_1 = k(x - x_1)$
ko'rinishda yoziladi. $M_1(x_1, y_1)$ va $M_2(x_2, y_2)$ nuqtalardan o'tuvchi to'g'ri chiziq tenglamasi

$$\frac{y - y_1}{y_2 - y_1} = \frac{x - x_1}{x_2 - x_1}$$

bo'lib, bu to'g'ri chiziqlarning burchak koefitsienti

$$k = \frac{y_2 - y_1}{x_2 - x_1}$$

formuladan topiladi. Agar $x_1=x_2$ bo'lsa, M_1, M_2 nuqtalardan o'tuvchi to'g'ri chiziq tenglamasi $x=x_1, y_1=y_2$ bo'lsa $y=y_1$ bo'radi.

To'g'ri chiziqlarning kesishuvi. Nuqtadan to'g'ri chiziqqacha masofa

Agar $A_1/A_2 \neq B_1/B_2$ bo'lsa, $A_1x + B_1y + C_1 = 0$ va $A_2x + B_2y + C_2 = 0$ to'g'ri chiziqlarning kesishgan nuqtasini ularning tenglamalari birga echib topiladi.

$M(x_0, y_0)$ nuqtadan $Ax + Bx + C = 0$ to'g'ri chiziqqacha masofa

$$d = \frac{|Ax_0 + By_0 + C|}{\sqrt{A^2 + B^2}}$$

formuladan topiladi.

$A_1x + B_1y + C_1 = 0$ va $A_2x + B_2y + C_2 = 0$ to'g'ri chiziqlar orasidagi burchak bissektrisasining tenglamasi

$$\frac{A_1x + B_1y + C_1}{\sqrt{A_1^2 + B_1^2}} \pm \frac{A_2x + B_2y + C_2}{\sqrt{A_2^2 + B_2^2}} = 0$$

bo'radi.

Ikkinchi tartibli egri chiziqlar. Aylana

Aylana deb, tekislikdag'i shunday nuqtalarning to'plamiga aytildikti, bu nuqtalarning har biridan shu tekislikdag'i markaz deb ataluvchi nuqtagacha bo'lgan masofa o'zgarmas miqdordir.

Bu o'zgarmas miqdor r -ni aylananing radiusi, $C(a; b)$ -nuqtani uning markazi desak, aylananing tenglamasi
 $(x-a)^2 + (y-b)^2 = r^2$

ko'rinishda bo'ladi. Aylana markazi koordinata boshi bilan ustma-ust tushsa, aylana tenglamasi $x^2 + y^2 = r^2$ bo'ladi. Agar $x_1^2 + y_1^2 = r^2$ bo'lsa, $M(x_1; y_1)$ nuqta aylanada yotadi. $x_1^2 + y_1^2 > r^2$ bo'lsa, M nuqta aylanadan tashqarida $x_1^2 + y_1^2 < r^2$ bo'lsa, nuqta aylana ichida yotadi.

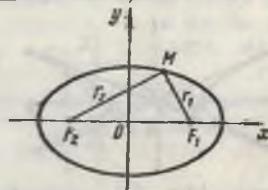

Ellips

Ellips deb, tekislikdag'i shunday nuqtalarning to'plamiga aytildikti, bu nuqtalarning har biridan fokuslar deb ataluvchi ikki nuqtagacha bo'lgan masofalar yig'indisi o'zgarmas miqdordir, u 2a bilan belgilanadi, bu o'zgarmas miqdor fokuslar orasidagi masofadan katta bo'radi.

Agar koordinata o'qlari ellipsga nisbatan simmetrik joylashib, ellipsning fokuslari esa OX o'qida koordinata boshidan bir xil masofada ($F_1(s, 0), F_2(-s, 0)$) yotsa, ellipsning

oddiy (kanonik) tenglamasi $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ ko'rinishda bo'ladi.

a - ellipsning katta, b - kichik yarim o'qi, a, b, c (c - fokuslar orasidagi masofaning yarmi) lar orasida $a^2 = b^2 + c^2$ munosabat bor. Ellipsning shakli (sizilish o'chovi) uning eksentrisiteti $e = c/a$ ($c < a$ bo'lgani uchun $e < 1$) bilan xarakterlanadi.

Ellipsning biror M nuqtasidan fokuslarga bo'lgan masofalarini nuqtaning fokal radius-vektorlari deb ataladi. Ular r_1, r_2 bilan belgilanadi (ellipsning ta'rifiga ko'rta uning ixtiyoriy nuqtasi uchun $r_1 + r_2 = 2a$ bo'ladi). Xususiy holda, $a=b$ ($c=0, e=0$: fokuslar markaz bilan ustma-ust tushsa) bo'lsa, ellips aylanaga aylanib qoladi: $x^2 + y^2 = a^2$. $M(x_1; y_1)$ nuqta va $x^2/a^2 + y^2/b^2 = 1$ ellipsning O'zaro joylanishi quyidagi shartlar bilan aniqlanadi:

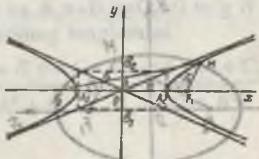

agar $x_1^2/a^2 + y_1^2/b^2 = 1$ bo'lsa, M nuqta ellipsda yotadi; agar $x_1^2/a^2 + y_1^2/b^2 < 1$ bo'lsa, M nuqta ellipsdan tashqarida; agar $x_1^2/a^2 + y_1^2/b^2 > 1$ bo'lsa, M nuqta ellips ichida yotadi. Fokal radius-vektorlar ellips nuqtalarining absissasi orqali $r_1 = a - ex$ (o'ng fokal radius-vektor), $r_2 = a + ex$ (chap fokal radius-vektor) bilan ifodalanadi.

Giperbolalar

Giperbolalar deb, tekislikdagi shunday nuqtalarining to'plamiga aytildiği, bu nuqtalarning har biridan fokuslar deb ataluvchi ikki nuqtasigacha bo'lgan masofalar ayirmalarining absolyut qiymatlari o'zgarmas miqdordir. Bu o'zgarmas miqdor 2a bilan belgilanadi, u fokuslar orasidagi masofadan kichik. Agar giperbolaning fokuslarini $F_1(s, 0)$, $F_2(-s, 0)$ nuqtalarga joylashtirsak, u holda giperbolaning

$$x^2/a^2 - y^2/b^2 = 1$$

kanonik tenglamasiga ega bo'lamiz, bu erda, $b^2 = c^2 - a^2$. Giperbolalar ikki tarmoqdan iborat va koordinata o'qlariga nisbatan simmetrik joylashgan. $A_1(a; 0)$, $A_2(-a, 0)$ lar giperbolaning uchlar deb ataladi, $|A_1 A_2| = 2a$ giperbolaning haqiqiy, $|B_1 B_2| = b$ mavhum o'qi deyiladi.

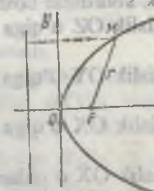

Agar giperbolaning $M(x, y)$ nuqtasidan biror to'g'ri chiziqqacha bo'lgan masofasi nolga intilsa ($x \rightarrow +\infty$ yoki $x \rightarrow -\infty$ da), u to'g'ri chiziq giperbolaning asimptotasi deyiladi. Giperbolalar ikkita asimptotaga ega, ular $y = \pm(b/a)x$. Giperbolaning asimptotalarini yasash uchun tomonlari $x=a$, $x=-a$, $y=b$, $y=-b$ bo'lgan to'g'ri to'rburchak chizamiz. Bu to'g'ri to'rburchakning qarama-qarshi uchlaridan o'tkazilgan to'g'ri chiziq giperbolaning asimptotalarini bo'ladi.

$c=c/a>1$ nisbatan giperbolaning eksentrisiteti deyiladi. $r_1 = ex-a$ (o'ng fokal radius-vektor) $r_2 = ex+a$ (chap fokal radius-vektori) giperbolalar o'ng tarmog'ining fokal radius-vektorlari deyiladi. Xuddi shunday chap tarmog'ining fokal radius-vektorlari $r_1 = ex-a$, $r_2 = (-ex-a)$ bo'ladi. Agar $a=b$ bo'lsa, giperbolaning tenglamasi $x^2-y^2=a^2$ bo'ladi. Bunday giperbolada teng tomonli deb ataladi. Uning asimptotalarini to'g'ri burchak hosil qiladi. Agar koordinatalar o'qlarini asimptotalar deb qarasak (teng tomonli giperbolada), uning tenglamasi $xy=m$ ($m=\pm a/2$; $m>0$ bo'lsa, giperbolalar I va III chorakda, $m<0$ bo'lsa, II va IV chorakda yotadi. $xy=m$ tenglamani $y=m/x$ ko'rinishda yozish mumkin bo'lgani uchun, teng tomonli giperbolalar x, y miqdorlar orasidagi teskari proporsional bog'lanishni ifodalaydi.

$x^2/a^2 - y^2/b^2 = 1$ va $x^2/a^2 - y^2/b^2 = -1$ giperbolalar bir xil yarim o'qqa va bir xil asimptotaga ega, lekin haqiqiy va mavhum o'qlari almashinib keladi. Bunday giperbolalar qoshma deb ataladi.

Parabola

Berilgan nuqta va berilgan to'g'ri chiziqdan barobar uzoqlikda turgan nuqtalarining to'plami parabola deb ataladi. Nuqta fokus, to'g'ri chiziq direktриса deb ataladi. Agar parabolaning direktрисаси $x=r/2$, fokusasi $F(r/2, 0)$ nuqta bo'lsa, uning tenglamasi $y^2=2px$ bo'ladi.

Bu parabola abssissa o'qiga nisbatan simmetrik joylashgan ($p>0$). $x^2=2py$ tenglama ordinata o'qiga nisbatan simmetrik bo'lgan parabola bo'ladi. $p>0$ da parabola mos o'qlarining musbat tomoniga, $p<0$ bo'lsa, manfiy tomoniga qaragan

bo'ldi. $y^2=2px$ parabolaning fokal radius – vektorining uzunligi $r=x+p/2$ ($p>0$) formula bilan aniqlanadi.

Fazodagi analitik geometriya. Tekislik va to'g'ri chiziq. Tekislik

Agar $A^2 + B^2 + C^2 \neq 0$ bo'lsa, har qanday 1-darajali $Ax+By+Cz+D=0$ ko'rinishdagi tenglama tekislikni aniqlaydi va ixtiyoriy tekislik tenglamasini.

$$Ax+By+Cz+D=0$$

ko'rinishda yozish mumkin. A, B, C lar tekislikka perpendikulyar $\vec{N}(A, B, C)$ vektorming koordinatalari. Umumiy tenglamani normal holga keltirish uchun uni normallashinuvchi ko'paytuvchi

$$\mu = \pm \frac{1}{|N|} = \pm \frac{1}{\sqrt{A^2 + B^2 + C^2}}$$

ga ko'paytirish kerak, bu erdag'i ishora D ning ishorasiga teskari bo'ldi.

$Ax+By+Cz+D=0$ umumiy tenglamaning xususiy xollar'i:

A=0; bu holda, tekislik OX o'qiga parallel;

B=0; bu holda, tekislik OY o'qiga parallel;

C=0; bu holda, tekislik OZ o'qiga parallel;

D=0; bu holda, tekislik koordinat boshidan o'tadi;

A=B=0; bu holda, tekislik OZ o'qiga perpendikulyar (XOY tekisligiga parallel);

A=C=0; bu holda, tekislik OY o'qiga perpendikulyar (XOZ tekisligiga parallel);

B=C=0; bu holda, tekislik OX o'qiga perpendikulyar (YOZ tekisligiga parallel);

A=D=0; bu holda, tekislik OX o'qidan o'tadi;

B=D=0; bu holda, tekislik OY o'qidan o'tadi;

C=D=0; bu holda, tekislik OZ o'qidan o'tadi;

A=B=D=0; bu holda, tekislik XOY (Z=0) tekisligi bilan ustma-ust tushadi;

A=C=D=0; bu holda, tekislik Xoz (Y=0) tekisligi bilan ustma-ust tushadi;

$B=C=D=0$; bu holda, tekislik YOZ (X=0) tekisligi bilan ustma-ust tushadi.

Agar umumiy tenglamada $D \neq 0$ bo'lsa, tenglamani $-D$ ga bo'lib,

$$\frac{x}{a} + \frac{y}{b} + \frac{z}{c} = 1$$

ga ega bo'lamiz.

(bu erda, $a=-D/A$, $b=-D/B$, $c=-D/C$) Bu tekislikning kesmalariga nisbatan tenglamasi deyiladi; a, b, c lar tekislikning OX, OY, OZ o'qlar bilan kesishgan nuqtalari.

$A_1x+B_1y+C_1z+D_1=0$ va $A_2x+B_2y+C_2z+D_2=0$ tekisliklar orasidagi burchak

$$\cos \varphi = \frac{A_1A_2 + B_1B_2 + C_1C_2}{\sqrt{A_1^2 + B_1^2 + C_1^2} \cdot \sqrt{A_2^2 + B_2^2 + C_2^2}}$$

formula bilan aniqlanadi.

Ikki tekislikning parallellik sharti

$$A_1/A_2 = B_1/B_2 = C_1/C_2$$

Perpendikulyarlik sharti

$$A_1A_2 + B_1B_2 + C_1C_2 = 0$$

$M_0(x_0, y_0, z_0)$ nuqtadan $Ax+By+Cz+D=0$ tekislikkacha masofa

$$d = \frac{|Ax_0 + By_0 + Cz_0 + D|}{\sqrt{A^2 + B^2 + C^2}}$$

formula bilan aniqlanadi.

Bunda tekislikning normal tenglamasiga $M_0(x_0, y_0, z_0)$ nuqtaning koordinatalarini qo'yib, natijaning absolyut qiymati olingan.

$M_0(x_0, y_0, z_0)$ nuqtadan o'tib, $\vec{N} = A\hat{i} + B\hat{j} + C\hat{k}$ vektorga perpendikulyar tekislik tenglamasi

$$A(x-x_0) + B(y-y_0) + C(z-z_0) = 0$$

ko'rinishda bo'ldi.

Berilgan $M_1(x_1, y_1, z_1), M_2(x_2, y_2, z_2), M_3(x_3, y_3, z_3)$ uch nuqtadan o'tuvchi tekislik tenglamasi

$$\begin{vmatrix} x - x_1 & y - y_1 & z - z_1 \\ x_2 - x_1 & y_2 - y_1 & z_2 - z_1 \\ x_3 - x_1 & y_3 - y_1 & z_3 - z_1 \end{vmatrix} = 0$$

To'g'ri chiziq

To'g'ri chiziqni ikki tekislikning kesishgan chizig'i deb qarash mumkin:

$$\begin{cases} A_1x + B_1y + C_1z + D_1 = 0 \\ A_2x + B_2y + C_2z + D_2 = 0 \end{cases}$$

Ikki $M_1(x_1, y_1, z_1)$, $M_2(x_2, y_2, z_2)$ nuqtadan o'tuvchi to'g'ri chiziq tenglamasi:

$$\frac{x - x_1}{l} = \frac{y - y_1}{m} = \frac{z - z_1}{n}$$

$M_1(x_1, y_1, z_1)$ nuqtadan o'tib, $\bar{S} = \bar{l}\bar{i} + \bar{m}\bar{j} + \bar{n}\bar{k}$ vektorga parallel to'g'ri chiziqning kanonik tenglamasi:

$$\frac{x - x_1}{l} = \frac{y - y_1}{m} = \frac{z - z_1}{n}$$

Xususiy holda, uni quyidagicha:

$$\frac{x - x_1}{\cos \alpha} = \frac{y - y_1}{\cos \beta} = \frac{z - z_1}{\cos \gamma}$$

yozish mumkin, bu erda, α, β, γ to'g'ri chiziqning o'qlari bilan tashkil qilgan burchaklari. To'g'ri chiziqning yo'naltiruvchi kosinuslari

$$\cos \alpha = \frac{l}{\sqrt{l^2 + m^2 + n^2}}, \cos \beta = \frac{m}{\sqrt{l^2 + m^2 + n^2}}, \cos \gamma = \frac{n}{\sqrt{l^2 + m^2 + n^2}}$$

formulalar bilan aniqlanadi.

Kanonik tenglamalarga t parametr kiritib, parametrik tenglamalarga kelish mumkin:

$$\begin{cases} x = lt + x_1 \\ y = mt + y_1 \\ z = nt + z_1 \end{cases}$$

Kanonik tenglamalar bilan berilgan ikki to'g'ri chiziq orasidagi burchak

$$\cos \varphi = \frac{l_1 l_2 + m_1 m_2 + n_1 n_2}{\sqrt{l_1^2 + m_1^2 + n_1^2} \cdot \sqrt{l_2^2 + m_2^2 + n_2^2}}$$

Ikki to'g'ri chiziqning parallellik sharti:

$$l_1/l_2 = m_1/m_2 = n_1/n_2$$

Ikki to'g'ri chiziqning perpendikulyarlik sharti:

$$l_1 l_2 + m_1 m_2 + n_1 n_2 = 0$$

$(x - x_1)/l = (y - y_1)/m = (z - z_1)/n$ to'g'ri chiziq va $Ax + By + Cz + D = 0$ tekislik orasidagi burchak formulasi

$$\sin \varphi = \frac{Al + Bm + Cn}{\sqrt{A^2 + B^2 + C^2} \cdot \sqrt{l^2 + m^2 + n^2}}$$

tenglikdan topiladi.

To'g'ri chiziq va tekislikning perpendikulyarlik sharti:

$$Al + Bm + Cn = 0$$

To'g'ri chiziq va tekislikning parallellik sharti:

$$A/l = B/m = C/n$$

$$\frac{x - x_1}{l} = \frac{y - y_1}{m} = \frac{z - z_1}{n} \text{ to'g'ri chiziqning } Ax + By + Cz + D = 0$$

tekislik bilan kesishish nuqtasini topish uchun ularning tenglamasi birga echiladi, bunda to'g'ri chiziqning

$$\begin{cases} x = lt + x_0 \\ y = mt + y_0 \\ z = nt + z_0 \end{cases}$$

ko'rinishdagi parametrik tenglamasidan foydalanish kerak.

a) Agar $Al + Bm + Cn \neq 0$ bo'ssa, to'g'ri chiziq tekislikni kesadi.

b) Agar $A_1+B_m+C_n=0$, $Ax_0+By_0+Cz_0+D \neq 0$ bo'lsa, to'g'ri chiziq tekislikka parallel.

v) Agar $A_1+B_m+C_n=0$, $Ax_0+By_0+Cz_0+D=0$ bo'lsa, to'g'ri chiziq tekislikda yotadi.

Ikkinchi tartibli sirtlar. Sfera

Dekart koordinata sistemasiда markazi $C(a,b,c)$ va radiusi r bo'lgan sfera

$$(x-a)^2 + (y-b)^2 + (z-c)^2 = r^2$$

tenglama bilan aniqlanadi.

Agar markaz koordinata boshida yotsa, tenglama

$$x^2 + y^2 + z^2 = r^2$$

ko'rinishida bo'ladi.

Silindrik sirtlar va ikkinchi tartibli konus

$F(x,y)=0$ tenglama fazoda yasovchisi OZ o'qiga parallel bo'lgan silindrik sirtni ifodalaydi. Shunga o'xshash $F(x,z)=0$ yasovchisi OY o'qiga, $F(y,z)=0$ OX o'qiga parallel bo'lgan silindrik sirtni ifodalaydi.

Ikkinchi tartibli silindrik sirtlarning kanonik tenglamalari:

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1 \quad -\text{elliptik silindr};$$

$$\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1 \quad -\text{giperbolik silindr};$$

$$y^2 = 2px \quad -\text{parabolik silindr}.$$

Uchala silindrning yasovchilari OZ o'qiga parallel, yo'naltiruvchisi esa, XOY tekisligida yotuvchi ikkinchi tartibli egri chiziq (ellips, giperbola, parabola). Fazoda egri chiziqni ikki sirtning kesishgan chizig'i deb qarash mumkin.

Masalan, elliptik silindrning yo'naltiruvchisi, ya'ni XOY tekisligidagi ellips tenglamasi

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$$

$$z=0.$$

O'qi OZ, uchi koordinata boshida bo'lgan ikkinchi tartibli konus tenglamasi ushbu

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = 0$$

ko'rinishda bo'ladi, xuddi shunga o'xshash,

$$\frac{x^2}{a^2} - \frac{y^2}{b^2} + \frac{z^2}{c^2} = 0, \quad - \frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 0$$

larning o'qlari mos ravishda OY, OX lar hisoblanadi.

Aylanma sirt. Ikkinchi tartibli sirt

Ellips, giperbola, parabolaning o'z simmetriya o'qi atrofida aylanishidan hosil bo'lgan ikkinchi tartibli aylanma sirt tenglamalarini keltiramiz:

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1 - \text{aylanma ellipsoid}, \quad \text{bu erda, aylanish o'qi OZ.}$$

$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = 1 - \text{aylanma bir pallali giperboloid},$
aylanish o'qi OZ (OZ giperbolaning mavhum o'qi).

$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = -1 - \text{aylanma ikki pallali giperboloid},$
aylanish o'qi OZ (giperbolaning haqiqiy o'qi).

$$x^2 + y^2 = 2pz - \text{aylanma paraboloid}.$$

Ikkinchi tartibli aylanma sirtlar umumiyl ko'rinishdagi ikkinchi tartibli sirtlarning hususiy holdir:

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1 - \text{ellipsoid};$$

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = 1 - \text{bir pallali giperboloid};$$

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = -1 \text{ - ikki pallali giperboloid;}$$

$$\frac{x^2}{p} + \frac{y^2}{q} = 2z \quad (p > 0, q > 0) \quad \text{- elliptik paraboloid.}$$

Bu to'rtta ikkinchi tartibli sirtlardan, ikkinchi tartibli uchta silindr (elliptik, giperbolik, parabolik) ikkinchi tartibli konusdan tashqari yana bitta ikkinchi tartibli sirt - giperbolik paraboloid mavjud:

$$\frac{x^2}{p} - \frac{y^2}{q} = 2z \quad (p > 0, q > 0)$$

Shunday qilib, 9 ta ikkinchi tartibli sirt mavjud.

2-§. MATEMATIK ANALIZGA KIRISH

Funksiya. Asosiy elementar funksiyalar va ularning xossalari

Ratsional va irratsional sonlar haqiqiy sonlar deyiladi. Barcha haqiqiy sonlar to'plami \mathbb{R} bilan belgilanadi. Har bir haqiqiy sonni sonlar o'qidagi nuqtada tasvirlash mumkin.

X va Y ikkita bo'sh bo'limgan to'plamlar bo'lsin. Agar X to'plamning har bir x elementiga biror aniq qoidaga asosan Y ning yagona elementi y mos kelsa, u holda, X to'plamda qiyatlar to'plami Y bo'lgan funksiya yoki akslantirish berilgan deyiladi. Buni shunday yozish mumkin:

$x \in X, X \xrightarrow{f} Y$ yoki $f: X \rightarrow Y$, bunda X funksianing aniqlanish sohasi, Y to'plam esa - funksianing qiyatlar to'plami deyiladi. Agar $y = f(x)$ x -ning funksiyasi bo'lsa, u holda $y=f(x)$ ko'rinishda ham yoziladi. f funksianing aniqlanish sohasi $D(f)$ bilan, qiyatlar to'plami esa, $E(f)$ bilan belgilanadi. Oddiy xollarda funksianing aniqlanish sohasi: $[a, b]$ interval (ochiq oraliq), ya'ni $a < x < b$ shartini qanoatlantiruvchi x -ning qiyatlar to'plami; $[a, b]$ segment (kesma yoki yopiq oraliq) ya'ni $a \leq x \leq b$ shartini

qanoatlantiruvchi x ning qiyatlar to'plami; $[a, b]$ (ya'ni $a < x \leq b$), yoki $[a, b]$ (ya'ni $a \leq x < b$) yarim interval, cheksiz interval $[a, +\infty]$ (ya'ni $a \leq x < \infty$) yoki $]-\infty, b]$ (ya'ni $-\infty < x \leq b$) yoki $]-\infty, +\infty]$ (ya'ni $-\infty < x < \infty$), bir necha intervallar va segmentlar to'plami va x.k.

Quyidagi funksiyalar asosiy elementar funksiyalar deyiladi:

1. $u=x^\alpha$ darajali funksiya, bunda $\alpha \in \mathbb{R}$

2. $u=a^x$ ko'rsatkichli funksiya, bunda a - birdan farqli ixtiyoriy musbat son: $a>0, a \neq 1$

3. $y=\log_a x$ logarifmik funksiya, bunda a - birdan farqli xar qanday musbat son: $a > 0, a \neq 1$.

4. $y=\sin x, y=\cos x, y=\operatorname{tg} x, y=\operatorname{ctg} x$, trigonometrik funksiyalar

5. $y=\operatorname{arcsin} x, y=\operatorname{arccos} x, y=\operatorname{arctg} x, y=\operatorname{arcctg} x$ teskari trigonometrik funksiyalar.

Elementar funksiyalar deb asosiy elementar funksiyalardan to'rt arifmetik amal va superpozitsiyalash (ya'ni murakkab funksiyalarni hosil qilish) amalini chekli son marta qo'llash yordamida hosil bo'ladi funksiyalarga aytildi.

Haqiqiy son x ning absolut qiymati (moduli) elementar bo'limgan funksiyaga misol bo'lib xizmat qiladi:

$$y = |x| = \begin{cases} x, & x \geq 0 \\ -x, & x < 0 \end{cases}$$

$|x|$ - geometrik nuqtai nazardan sonlar o'qida koordinatasi bo'lgan nuqtadan koordinata boshigacha bo'lgan masofaga teng. Koordinatalari $(x, f(x))$ bo'lgan XOY tekislikdagi nuqtalar to'plami $y=f(x)$ funksianing grafigi deyiladi, bunda $x \in D(f)$.

Agar xar qanday $x \in D(f)$ uchun $f(-x)=f(x)$ [mos ravishda $f(-x)=-f(x)$] bo'lsa, aniqlanish sohasi nolga nisbatan simmetrik bo'lgan $f(x)$ funksiya, juft (toq) funksiya deyiladi.

Juft funksianing grafigi ordinata o'qiga nisbatan, toq funksianing grafigi - koordinata boshiga nisbatan simmetrik bo'ladi. Agar shunday musbat T son mavjud bo'lsaki. $x \in D(f)$ va $(x+T) \in D(f)$ da $f(x+T)=f(x)$ tenglik bajarilsa, $f(x)$ funksiya

davriy funksiya deyiladi. Ko'rsatilgan xossaga ega bo'lgan en_b kichik musbat τ soniga funksianing asosiy davri deyiladi.

Sonli ketma-ketliklar, ularning limiti

Funksianing nuqtadagi chekli limitining ta'rifi:

Agar ixtiyoriy kichik $\varepsilon > 0$ uchun shunday $\delta(\varepsilon) > 0$ son topilsaki, $|x-a| < \delta$ bo'lganda, $|f(x)-A| < \varepsilon$ tengsizlik kelib chiqsa, $x \rightarrow a$ da A soni f(x) funksianing limiti deyiladi va quyidagicha yoziladi: $\lim_{x \rightarrow a} f(x) = A$. Agar $|x| > N$ bo'lganda $|f(x)-A| < \varepsilon$ bo'lsa $\lim_{x \rightarrow \infty} f(x) = A$ deb yoziladi.

Agar $\lim_{x \rightarrow a} f(x) = 0$ (yoki $\lim_{x \rightarrow a} F(x) = \infty$) bo'lsa, f(x) funksiya (yoki F(x)) cheksiz kichik (cheksiz katta) deyiladi.

$x \rightarrow a$ bo'lganda, bir vaqtida 0 yoki ∞ ga intiluvchi 2 ta f(x) va $\varphi(x)$ funksiyalar uchun $\lim_{x \rightarrow a} \frac{f(x)}{\varphi(x)} = 1$ bo'lsa, bu funksiyalar ekvivalent deyiladi va $f(x) \sim \varphi(x)$ ko'rinishda yoziladi.

Elementar funksianing biror nuqtadagi limiti funksianing shu nuqtadagi qiymatiga teng: $\lim_{x \rightarrow a} f(x) = f(a)$. $x \rightarrow a$ ($a=0$ yoki $a=\infty$) bo'lganda funksianing limitini hisoblashda quyidagi aniqmasliklarga kelish mumkin:

$$\infty - \infty, \quad \infty \cdot 0, \quad \frac{0}{0}, \quad 1^\infty, \quad 0^0, \quad \infty^0.$$

Bu aniqmasliklarni ochishning oddiy usullari:

- 1) Aniqmaslikka olib keladigan ko'paytuvchiga qisqartirish.
- 2) ($x \rightarrow \infty$ da ko'phadlarning nisbati berilsa) surat va mahrajni argumentning eng yuqori darajasiga bo'lish.
- 3) Cheksiz kichik va cheksiz katta ekvivalentlarni qo'llash.
- 4) Ikkita ajoyib limitlardan foydalanish

$$\lim_{\alpha(x) \rightarrow 0} \frac{\sin \alpha(x)}{\alpha(x)} = 1 \quad \text{va} \quad \lim_{\alpha(x) \rightarrow 0} (1 + \alpha(x))^{\frac{1}{\alpha(x)}} = e.$$

Funksianing uzluksizligi

Agar

1. $f(x)$ funksiya α nuqtada aniqlangan;
2. $\lim_{x \rightarrow a} f(x) = f(a)$

bo'lsa, u holda, f(x) funksiya α nuqtada uzluksiz deyiladi.

Agar $\lim_{x \rightarrow a-0} f(x) = f(a-0)$ ($\lim_{x \rightarrow a+0} f(x) = f(a+0)$) bo'lsa, u holda, f(x) funksiya a nuqtada chapdan (o'ngdan) uzluksiz deyiladi.

Agarda funksianing aniqlanish sohasidagi α nuqtada uzluksizlik sharti buzilsa, bu nuqta funksianing uzulish nuqtasi deyiladi.

Agarda $\lim_{x \rightarrow a-0} f(x) = f(a-0)$ va $\lim_{x \rightarrow a+0} f(x) = f(a+0)$ limitlar mavjud bo'lib, lekin f(a), f(a-0), f(a+0) sonlar o'zarlo teng bo'lmasalar bu holda α nuqta 1-tur uzulish nuqtasi deyiladi.

1-tur uzulish nuqtasi tuzatish mumkin bo'lgan uzulish nuqtasi deyiladi, agarda $f(a-0) = f(a+0) \neq f(a)$ bo'lsa, 1-tur uzulish nuqtasi sakrash nuqasi deyiladi agarda $f(a-0) \neq f(a+0)$ bo'lsa $f(a-0) - f(a+0)$ ayirmaga funksianing α nuqtadagi sakrash qiymati deyiladi.

1-tur uzulish nuqtasi bo'lmagan boshqa uzulish nuqtalari 2-tur uzulish nuqtalari deyiladi.

Bir o'zgaruvchili funksianing differential hisobi

$y=f(x)$ funksianing x bo'yicha hosilasi deb, funksiya ortirmasi Δx ning argument ortirmasi Δx ga nisbatining argument ortirmasi $\Delta x \rightarrow 0$ dagi limitiga aytildi va ta'rifga asosan quyidagicha yoziladi:

$$f'(x) = \lim_{\Delta x \rightarrow 0} \frac{\Delta y}{\Delta x} = \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x) - f(x)}{\Delta x}.$$

Hesilaning geometrik ma'nosi: $y=f(x)$ funksiya grafigiga x nuqtada o'kazilgan urummaning burchak koeffitsientiga teng, ya'ni $y' = \tan \alpha$. Hesila $y=f(x)$ funksianing x nuqtadagi

O'zgarish tezligidir. Hosilani topish amali funksiyani differensiallash deyiladi.

Hosilaning asosiy qoidalari:

$$1). (u \pm v)' = u' \pm v'. 2). (Cu)' = Cu'. 3). (uv)' = u'v + uv'.$$

$$4). \left(\frac{u}{v} \right)' = \frac{u'v - uv'}{v^2}. 5). f'_x[u(x)] = f'_u[u(x)] \cdot u'_x(x)$$

Hosilalar jadvali:

$$1). C' = 0; 2). x' = 1;$$

$$2). (x^m)' = m \cdot x^{m-1}.$$

$$3). (\sqrt{x})' = \frac{1}{2\sqrt{x}}.$$

$$4). \left(\frac{1}{x} \right)' = -\frac{1}{x^2}.$$

$$5). (e^x)' = e^x.$$

$$6). (a^x)' = a^x \ln a.$$

$$7). (\ln x)' = \frac{1}{x}.$$

$$8). (\log_a x)' = \frac{1}{x \ln a}.$$

$$9). (\sin x)' = \cos x.$$

$$10). (\cos x)' = -\sin x.$$

$$11). (\operatorname{tg} x)' = \frac{1}{\cos^2 x}.$$

$$12). (\operatorname{ctg} x)' = -\frac{1}{\sin^2 x}.$$

$$13). (\arcsin x)' = \frac{1}{\sqrt{1-x^2}}$$

$$14). (\arccos x)' = -\frac{1}{\sqrt{1-x^2}}$$

$$15). (\operatorname{arctgx})' = \frac{1}{1+x^2}$$

$$16). (\operatorname{arcctgx})' = -\frac{1}{1+x^2}$$

$$17). (\operatorname{sh} x)' = \left(\frac{e^x - e^{-x}}{2} \right)' = \operatorname{ch} x.$$

$$18). (\operatorname{ch} x)' = \left(\frac{e^x + e^{-x}}{2} \right)' = \operatorname{sh} x.$$

$$19). (\operatorname{th} x)' = \left(\frac{\operatorname{sh} x}{\operatorname{ch} x} \right)' = \frac{1}{\operatorname{ch}^2 x}.$$

$$20). (\operatorname{cth} x)' = \left(\frac{\operatorname{ch} x}{\operatorname{sh} x} \right)' = -\frac{1}{\operatorname{sh}^2 x}.$$

Oshkormas funksiyaning hosilasi

$F(x,y)=0$ oshkormas funksiyaning hosilasini topish uchun tenglikning ikki tomonidan y -ni x -ning funksiyasi ekanligini ko'zda tutgan holda x bo'yicha hosila olinadi va hosil bo'lgan tenglikdan y ' topiladi.

Parametrik ko'rinishda berilgan funksiyalarning hosilasi

Agar funksiya quyidagi parametrik ko'rinishda berilgan bo'lsa:

$$x=\varphi(t), y=\psi(t); u \text{ holda } y'_x = \frac{y'_t}{x'_t}.$$

Urunkma tenglamasi

Agar egri chiziq $y=f(x)$ tenglama orqali berilgan bo'lsa, u holda, $f'(x_0) = \operatorname{tg} \alpha$, bu erda α OX o'qining musbat yo'nalishi bilan x_0 nuqtada egri chiziqqa o'tkazilgan urunma orasidagi burchak.

$y=f(x)$ egri chiziqqa $M_0(x_0, y_0)$ nuqtada o'tkazilgan urunma tenglamasi: $y - y_0 = f'(x_0)(x - x_0)$.

Yuqori tartibli hosilalar

$y=f(x)$ funksiyaning ikkinchi tartibli hosilasi deb uning birinchi tartibli hosilasidan olingan hosilasiga aytildi va y'' bilan belgilanadi. $y=f(x)$ funksiyaning uchinchi tartibli hosilasi deb uning ikkinchi tartibli hosilasidan olingan hosilasiga aytildi hamda y''' bilan belgilanadi va hokazo.

Agar funksiya quyidagi parametrik ko'rinishda berilgan bo'lsa:

$$x=\varphi(t), \quad y=\psi(t); \quad u \text{ holda}, \quad y''_{xx} = \frac{(y'_x)'_t}{x'_t}, \quad y'''_{xxx} = \frac{(y''_{xx})'_t}{x'_t} \quad \text{va}$$

hokazo.

Lopital qoidasi

$\left(\frac{0}{0}\right)$ yoki $\frac{\infty}{\infty}$ ko'rinishdagi aniqmasliklarni ochish).

2-ta cheksiz kichik miqdor yoki cheksiz katta miqdor nisbatining limiti ularning hosilalari nisbatlarining limitiga teng, ya'ni

$$\lim_{x \rightarrow a} \frac{f(x)}{\varphi(x)} = \lim_{x \rightarrow a} \frac{f'(x)}{\varphi'(x)} = A.$$

Funksiyani tekshirish

Agar x_0 nuqtaning etarli kichik atrofida $f(x) < f(x_0)$ yoki $f(x) > f(x_0)$ tengsizliklar bajarilsa, $f(x)$ funksiya x_0 nuqtada maksimum yoki minimumga ega bo'ladi (max. yoki min.).

Funksyaning maksimum va minimumlari funksyaning ekstremumlari deyiladi. Ekstremumning zaruriy sharti: agar x_0 $f(x)$ funksyaning ekstremum nuqtasi bo'lsa, u holda, $f'(x_0) = 0$, yoki bu nuqtada hosila mavjud bo'lmaydi. Ekstremumning etarli sharti: agar $f'(x) = x_0$ nuqtaning chap tomonidan O'ng tomoniga O'tishda O'z ishorasini musbatdan manfiyga O'zgartirsa, shu nuqtada funksiya maksimumga ega bo'ladi, agar chapdan O'ngga O'tishda $f'(x)$ ning ishorasi manfiydan musbatga O'zgarsa, funksiya shu nuqtada minimumga ega bo'ladi.

Agar (a, b) ning hamma nuqtalarida $f''(x) < 0$ bo'lsa, shu intervalda $y = f(x)$ funksyaning grafigi qavariq bo'ladi, agar (a, b) ning hamma nuqtalarida $f''(x) > 0$ bo'lsa, shu intervalda $y = f(x)$ funksyaning grafigi botiq bo'ladi. Uzlucksiz funksiya

grafigining qavariq qismini botiq qismidan ajratgan nuqta burilish nuqtasi bo'ladi, bu nuqtada $f''(x) = 0$ bo'ladi.

$y=kx+b$ to'g'ri chiziq $y=f(x)$ funksiya grafigining og'ma asimptotasi deyiladi. Bu erda,

$$k = \lim_{x \rightarrow \infty} \frac{f(x)}{x}, \quad b = \lim_{x \rightarrow \infty} (f(x) - kx).$$

$k=0$ bo'lganda $y=b$ bo'ladi, bu gorizontal asimptota deyiladi. Agar $\lim_{x \rightarrow a^-} f(x) = \infty$ yoki $\lim_{x \rightarrow a^+} f(x) = \infty$ bo'lsa, $x=a$ to'g'ri chiziq vertikal asimptota deyiladi.

3-§. BIR O'ZGARUVCHILI FUNKSIYANING INTEGRALI

Aniqmas integral

Agar $F'(x) = f(x)$ bo'lsa, $F(x)$ funksiya $f(x)$ funksyaning boshlang'ich funksiyasi deyiladi. Agar $F(x)$ funksiya $f(x)$ funksyaning boshlang'ich funksiyasi bo'lsa, u holda, $F(x) + C$ ham boshlang'ich funksiyasidir. $f(x)$ funksyaning aniqmas integrali deb uning barcha boshlang'ichlari to'plamiga aytildi va quyidagicha belgilanadi: $\int f(x)dx = F(x) + C$.

Integrallash qoidalari:

1. $(\int f(x)dx)' = f(x).$
2. $d(\int f(x)dx) = f(x)dx.$
3. $\int dF(x) = F(x) + C.$
4. $\int af(x)dx = a \int f(x)dx.$
5. $\int [f_1(x) \pm f_2(x)]dx = \int f_1(x)dx \pm \int f_2(x)dx.$
6. Agar $\int f(x)dx = F(x) + C$ va $u = \varphi(x)$ bo'lsa, u holda, $\int f(u)du = F(u) + C.$

Aniqmas integrallar jadvali

I. $\int dx = x + C.$	VIII. $\int \sin x dx = -\cos x + C.$
II. $\int x^m dx = \frac{x^{m+1}}{m+1} + C, m \neq -1.$	IX. $\int \cos x dx = \sin x + C.$
III. $\int \frac{dx}{x} = \ln x + C.$	X. $\int \frac{1}{\sin^2 x} dx = \operatorname{tg} x + C.$
IV. $\int \frac{dx}{1+x^2} = \operatorname{arctg} x + C.$	XI. $\int \frac{1}{\cos^2 x} dx = -\operatorname{ctg} x + C.$
V. $\int \frac{dx}{\sqrt{1-x^2}} = \arcsin x + C.$	XII. $\int \operatorname{sh} x dx = \operatorname{ch} x + C.$
VI. $\int e^x dx = e^x + C.$	XIII. $\int \operatorname{ch} x dx = \operatorname{sh} x + C.$
VII. $\int a^x dx = \frac{a^x}{\ln a} + C.$	

Ixtiyoriy funksiyalarni integrallashda quyidagi usullardan foydalaniлади:

- Agar $\int f(x) dx = F(x) + C$ bo'lsa, u holda,

$$\int f(ax+b) dx = \frac{1}{a} F(ax+b) + C \text{ bo'ladi, bu erda, } a \text{ va } b \text{ lar ixtiyoriy o'zgarmaslar.}$$

2. Differensial ostiga kiritish:

$$\int f[\varphi(x)] \cdot \varphi'(x) dx = \int f[\varphi(x)] \cdot d[\varphi(x)] = \int f(u) du \quad \text{chunki } \varphi'(x) dx = d\varphi(x), \quad [u = \varphi(x)].$$

- Bo'laklab integrallash formulasi: $\int u dv = uv - \int v du.$

Odatda, dv ifoda integrallashda qiyinchilik tug'dirmaydigan qilib tanlab olinadi. Bo'laklab integrallanadigan funksiyalar sinfiga, xususan:

$$P(x) \cdot e^{\alpha x}, \quad P(x) \cdot \sin \alpha x, \quad P(x) \cdot \cos \alpha x, \quad P(x) \cdot \ln x,$$

$P(x) \cdot \arcsin x, \quad P(x) \cdot \operatorname{arctg} x$ lar kiradi, bu erda, $P(x)$ - ko'phad.

4. Ratsional kasrlarni integrallash:

$$R(x) = \frac{P(x)}{Q(x)} \text{ ko'phadlar nisbati berilgan bo'lsa, } R(x)$$

elementar kasrlarga ajratiladi:

$$\text{ular } \frac{A}{(x-a)^m}, \quad \frac{Mx+N}{(x^2+px+q)} \text{ ko'rinishda bo'lib, bu erda}$$

m butun musbat son.

$$\int \frac{A}{x-a} dx = A \ln|x-a| + C;$$

$$\int \frac{Adx}{(x-a)^m} = -\frac{A}{m-1} \cdot \frac{1}{(x-a)^{m-1}} + C; \quad m \neq 1.$$

$$\int \frac{dx}{x^2+px+q} = \frac{2}{\sqrt{4q-p^2}} \cdot \operatorname{arctg} \frac{2x+p}{\sqrt{4q-p^2}} + C.$$

5. O'zgaruvchilarni almashtirish usuli:

Bu usulning ma'nosi x o'zgaruvchidan t o'zgaruvchiga o'tish: $x=f(t).$ Ko'p uchraydigan funksiyalarga standart almashtirishlar ko'rsatish mumkin.

$$\int R\left(x, \sqrt{\frac{ax+b}{cx+d}}\right) dx, \quad \sqrt{\frac{ax+b}{cx+d}} = t;$$

$$\int R(x, \sqrt{a^2 - x^2}) dx, \quad x = a \cdot \sin t;$$

$$\int R(x, \sqrt{a^2 + x^2}) dx, \quad x = a \cdot \operatorname{tgc} t;$$

$$\int R(x, \sqrt{x^2 - a^2}) dx, \quad x = \frac{a}{\sin t};$$

$$\int R(\sin x, \cos x) dx, \quad \operatorname{tg}\left(\frac{x}{2}\right) = t;$$

bu erda, R - ratsional funksiyaning simvoli.

Aniq integral

Agar $F'(x) = f(x)$ va $F(x)$ boshlang'ich $[a, b]$ kesinada uzluksiz bo'lsa, aniq integralni hisoblashda Nyuton-Leybnis formulasi

$$\int_a^b f(x)dx = F(b) - F(a)$$

Ko'rinishda bo'ladi. Aniq integral $x=a$, $x=b$, $y=0$ to'g'ri chiziqlar va $y=f(x)$ funksiya grafigi bilan chegaralangan trapetsiyaning yuziga teng, agar $f(x) \geq 0$ bo'lsa, «+» ishora bilan, $f(x) \leq 0$ bo'lsa, «-» ishora bilan olinadi.

Xosmas integrallar.

Chegarasi cheksiz xosmas integrallar

Agar $\lim_{b \rightarrow +\infty} \int_a^b f(x)dx$ limit mavjud bo'lsa, bu limit $f(x)$

funksiyaning $[a, +\infty)$ dagi xosmas integrali deyiladi va

$$\int_a^{+\infty} f(x)dx = \lim_{b \rightarrow +\infty} \int_a^b f(x)dx \text{ ko'rinishda yoziladi.}$$

Xuddi shuningdek, agar $\lim_{b \rightarrow -\infty} \int_a^b f(x)dx$ limit mavjud bo'lsa, bu limit $f(x)$ funksiyaning $(-\infty, b]$ dagi xosmas integrali deyiladi va $\int_{-\infty}^b f(x)dx = \lim_{b \rightarrow -\infty} \int_a^b f(x)dx$ ko'rinishda yoziladi. Agar o'ng tomonda turgan limit chekli bo'lsa, u holda integral yaqinlashuvchi xosmas integral deyiladi, aks holda, integral uzoqlashuvchi deyiladi. Agar $f(x)$ funksiya $[a, c]$ kesma ichidagi biror x_0 nuqtada uzluksiz bo'lsa, u holda, integral ikki integral yig'indisi ko'rinishda yoziladi:

$\int_a^c f(x)dx = \int_a^{x_0} f(x)dx + \int_{x_0}^c f(x)dx$.

Agar $f(x)$ funksiya (a, c) ning chap uchida uzlukli bo'lsa, u holda, $\int_a^c f(x)dx = \lim_{\epsilon \rightarrow 0} \int_{a+\epsilon}^{c-\epsilon} f(x)dx$.

Agar o'ng tomonda turgan limit chekli bo'lsa, u holda, integral yaqinlashuvchi xosmas integral deyiladi, aks holda integral uzoqlashuvchi deyiladi. Agar $f(x)$ funksiya $[a, c]$ kesma ichidagi biror x_0 nuqtada uzluksli bo'lsa, u holda, integral ikki integral yig'indisi ko'rinishda yoziladi:

$$\int_a^c f(x)dx = \int_a^{x_0} f(x)dx + \int_{x_0}^c f(x)dx.$$

4-§. KO'P O'ZGARUVCHILI FUNKSIYALAR

1. Agar biror D to'plamning har bir (x_1, x_2, \dots, x_n) elementiga biror qoida bilan E to'plamdagagi yagona u haqiqiy son mos qo'yilgan bo'lsa, u holda, D to'plamda n o'zgaruvchining funksiysiyan aniqlangan deyiladi va quyidagicha yoziladi: $u = u(x_1, x_2, \dots, x_n)$.

2. $M(x_1, x_2, \dots, x_n)$ nuqta funksiyaning aniqlanish sohasida $M_0(x_0, x_1, \dots, x_n)$ nuqtaga ixtiyoriy usulda intilganda

$$\lim_{M \rightarrow M_0} u(M) = u(M_0)$$

tenglik o'rini bo'lsa, $u = u(x_1, x_2, \dots, x_n)$ funksiya $M_0(x_0, x_1, \dots, x_n)$ nuqtada uzluksiz deyiladi.

3. $u = u(x_1, x_2, \dots, x_n)$ funksiyaning x_1 o'zgaruvchi bo'yicha xususiy hosilasi

$$\frac{\partial u}{\partial x_1} = \lim_{\Delta x_1 \rightarrow 0} \frac{\Delta_{x_1} u}{\Delta x_1} = \lim_{\Delta x_1 \rightarrow 0} \frac{u(x_1 + \Delta x_1, x_2, \dots, x_n)}{\Delta x_1}$$

tenglik bilan aniqlanadi.

Xuddi shuningdek, qolgan argumentlar bo'yicha ham xususiy hosilalar topiladi.

Cheksiz funksiyalarning xosmas integrallari

$f(x)$ funksiya $a \leq x < c$ oraliqda aniqlangan va uzluksiz bo'lsin, $x=c$ bo'lganda esa yoki aniqlanmagan, yoki uzelishga

$$4. \frac{\partial^n u}{\partial x_{i_1}^{k_1} \partial x_{i_2}^{k_2} \dots \partial x_{i_m}^{k_m}}$$

ifoda n - tartibli xususiy hosilaning umumiyl formulasi, bu erda $k_1+k_2+\dots+k_m=n$ va $1 \leq i_j \leq n$, $1 \leq j \leq m$.

5-§. ODDIY DIFFERENSIAL TENGlamalar

1. Erkli o'zgaruvchi x , noma'lum funksiya y va uning hosilalari y' , y'' , ..., $y^{(n)}$ lar orasidagi bog'lanishga differensial tenglama deyiladi va quyidagi ko'rinishda yoziladi:

$$F(x, y, y', y'', \dots, y^{(n)}) = 0.$$

Birinchi tartibli differensial tenglama $F(x, y, y') = 0$ ko'rinishda yoziladi. Bu tenglamaning $x=x_0$ dagi $y=y_0$ boshlang'ich shartni qanoatlantiruvchi xususiy yechimini topish masalasi Koshi masalasi deyiladi.

Berilgan differensial tenglama $y=\varphi(x)$ yechimining XOY tekislikda chizilgan grafigi bu tenglamaning integral egri chizig'i deyiladi.

2. $y' + P(x)y = Q(x)$ ko'rinishdagi tenglama birinchi tartibli chiziqli differensial tenglama deyiladi. Agar $Q(x) = 0$ bo'lsa, bir jinsli, agar $Q(x) \neq 0$ bo'lsa, bir jinsli bo'lmagan differensial tenglama deyiladi. Bir jinsli tenglamaning umumiyl yechimi o'zgaruvchilarni ajratish yo'li bilan topiladi. Bir jinsli bo'lmagan tenglamaning umumiyl yechimi esa bir jinsli tenglamaning umumiyl yechimidan ixtiyoriy o'zgarmas C ni variatsiyalash yordamida topiladi yoki $y = u \cdot v$ ko'rinishda almashtirish yordamida topiladi.

3. $y^{(n)} = f(x, y', \dots, y^{(n-1)})$ tenglama n -tartibli differensial tenglama bo'lib, uning $\mathcal{J}(x_0) = J_0, J'(x_0) = J'_0; \dots, J^{(n-1)}(x_0) = J_0^{(n-1)}$ boshlang'ich shartlarni qanoatlantiruvchi $y=\varphi(x)$ yechimini topish masalasi Koshi masalasi deyiladi. n -tartibli differensial tenglamaning umumiyl yechimi $y = \varphi(x, C_1, C_2, \dots, C_n)$ ko'rinishda bo'ladi.

4) O'zgarmas koeffitsientli, n -tartibli, chiziqli, bir jinsli differensial tenglama berilgan bo'lsin:

$$y^{(n)} + a_1 y^{(n-1)} + \dots + a_n y = 0,$$

bu erda, a_1, a_2, \dots, a_n -lar o'zgarmas sonlar.

Bu tenglamaning umumiyl yechimini topish uchun uning fundamental yechimlar sistemasinin topish etarlidir. n - tartibli differensial tenglama bo'lgan holda fundamental sistema n ta chiziqli erkli xususiy yechimlardan iborat bo'ladi. Umumiyl yechim y_1, y_2, \dots, y_n chiziqli erkli xususiy yechimlarning chiziqli kombinasiyasini sifatida yoziladi: $y = c_1 y_1 + c_2 y_2 + \dots + c_n y_n$.

5) $y^{(n)} + a_1 y^{(n-1)} + a_2 y^{(n-2)} + \dots + a_n y = f(x)$ n -tartibli, o'zgarmas koeffitsientli, bir jinsli bo'lmagan chiziqli tenglama berilgan bo'lsin. Bu tenglamaga mos bir jinsli o'zgarmas koeffitsientli $y^{(n)} + a_1 y^{(n-1)} + a_2 y^{(n-2)} + \dots + a_n y = 0$ tenglamaning umumiyl yechimi \bar{y} bo'lsin. U holda o'zgarmas koeffitsientli, bir jinsli bo'lmagan tenglamaning umumiyl yechimi $y = \bar{y} + y^0$ ko'rinishda izlanadi, bu erda, y^0 - bir jinsli bo'lmagan tenglamaning xususiy yechimi. O'zgarmas koeffitsientli, bir jinsli bo'lmagan tenglamaning xususiy yechimini topish uchun, noaniq koeffitsientlar usulini qo'llaymiz. Bu usul o'ng tomoni maxsus ko'rinishda bo'lgan tenglamalar uchun tatbiq qilinadi. Bunda xususiy yechimni o'ng tomonning shakliga o'xshash shakida izlash kerak.

$$6) \begin{cases} \frac{dx}{dt} = f(t, x, y) \\ \frac{dy}{dt} = g(t, x, y) \end{cases}$$

ko'rinishdagi sistemaga differensial tenglamalarning normal sistemasi deyiladi, bu erda, x va y lar noma'lum funksiyalar.

O'zgarmas koeffitsientli 2-ta chiziqli diffyerensial tenglamalar sistemasi quyidagi ko'rinishga ega:

$$\begin{cases} \frac{dx}{dt} = a_{11}x + a_{12}y \\ \frac{dy}{dt} = a_{21}x + a_{22}y \end{cases}$$

bu erda, a_{ij} – lar o'zgarmas sonlar.

Bu sistemani matrisa ko'rinishda quyidagicha:

$$\frac{dX}{dt} = A \cdot X$$

yozish mumkin, bu yerda,

$$A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix}, \quad X = \begin{pmatrix} x \\ y \end{pmatrix}, \quad \frac{dX}{dt} = \begin{pmatrix} \frac{dx}{dt} \\ \frac{dy}{dt} \end{pmatrix}.$$

Sistemaning yechimini $x = p_1 e^{\lambda t}$; $y = p_2 e^{\lambda t}$ ko'rinishda qidiramiz. x va y qiymatlarni tenglamalar sistemasiga qo'yib, p_1 , p_2 larga nisbatan chiziqli algebraik tenglamalar sistemasini hosil qilamiz:

$$\begin{cases} (a_{11} - \lambda)p_1 + a_{12}p_2 = 0 \\ a_{21}p_1 + (a_{22} - \lambda)p_2 = 0 \end{cases}$$

Bu sistema noldan farqli yechimlarga ega bo'lishi uchun uning determinantini nolga teng bo'lishi kerak:

$$\begin{vmatrix} a_{11} - \lambda & a_{12} \\ a_{21} & a_{22} - \lambda \end{vmatrix} = 0$$

Bu esa λ ga nisbatan 2-tartibli algebraik tenglama. Uning ildizlari haqiqiy, har xil, kompleks, karrali bo'lishi mumkin.

Ularning qiymatlari qarab A matritsaning xos vektorlari topiladi va ular orqali berilgan sistemaning umumiy yechimlari yoziladi.

6-\$. SONLI VA FUNKSIONAL QATORLAR

1. $u_1 + u_2 + \dots + u_n + \dots = \sum_{n=1}^{\infty} u_n$ sonli qator deyiladi.

Agar $S_n = \sum_{k=1}^n u_k$ qismiy yig'indining limiti $S = \lim_{n \rightarrow \infty} S_n$ mavjud bo'lsa, sonli qator yaqinlashuvchi deyiladi va S-soni qatorning yig'indisi deyiladi. Agar limit mavjud bo'lmasa,

berilgan sonli qator uzoqlashuvchi deyiladi. $\lim_{n \rightarrow \infty} u_n = 0$ sonli qator yaqinlashuvchi bo'lشining zaruriy shartidir.

Musbat hadli sonli qatorlar yaqinlashishining etarli shartlari ($u_i \geq 0$):

a) Agar $\lim_{n \rightarrow \infty} \frac{u_n}{v_n} = k$, ($k \neq 0, \infty$) bo'lsa, u holda, $\sum u_n$

va $\sum_{n=1}^{\infty} v_n$ qatorlar bir vaqtida yaqinlashuvchi va uzoqlashuvchi bo'ladi. Musbat hadli sonli qatorlar odatda, quyidagi qator lan taqqoslanadi: $\sum_{n=1}^{\infty} \frac{1}{n^{\alpha}}$ - $\alpha > 1$ bo'lganda yaqinlashuvchi va $\alpha \leq 1$ bo'lganda uzoqlashuvchi qator bo'ladi.

b) Dalamber alomati:

$\lim_{n \rightarrow \infty} \frac{u_{n+1}}{u_n} = q$ bo'lsa, $\sum u_n$ qator $q < 1$ bo'lganda yaqinlashuvchi, $q > 1$ bo'lganda uzoqlashuvchi bo'ladi. Agar $q = 1$ bo'lsa, qatorning yaqinlashishini bu alomat bilan aniqlab bo'lmaydi.

Xuddi shunga o'xshash, Koshi alomati mavjud. Bundan tashqari integral alomati bilan ham qatorning yaqinlashuvchiligi tekshiriladi.

2. $u_1(x) + u_2(x) + \dots + u_n(x) + \dots$ ko'rinishdagи qatorga funksional qator deyiladi, $a_0 + a_1x + a_2x^2 + \dots + a_nx^n + \dots$ qator darajali qator deyiladi. a_n -lar qatorning koeffitsientlari. Darajali qatorning yaqinlashish sohasi markazi koordinatalar boshida bo'lgan intervaldan iborat. $-R$ dan $+R$ gacha bo'lgan intervalga darajali qatorning yaqinlashish intervali deyiladi. bu interval ichida yotgan har qanday x nuqtada qator yaqinlashadi, shu bilan birga absolyut yaqinlashadi, uning tashqarisidagi x nuqtalarda qator uzoqlashadi, R – darajali qatorning yaqinlashish radiusi deyiladi va

$$R = \lim_{n \rightarrow \infty} \left| \frac{U_n}{U_{n-1}} \right|$$

formula bilan hisoblanadi. Darajali qatorlarni yaqinlashish intervali ichida hadlab differensiallash va integrallash mumkin.

3. 2ℓ davrlı $f(x)$ funksiya uchun Fure qatori:

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos \frac{n\pi x}{\ell} + b_n \sin \frac{n\pi x}{\ell}.$$

Bu erda,

$$a_n = \frac{1}{\ell} \int_{-\ell}^{\ell} f(x) \cos \frac{n\pi x}{\ell} dx, \quad n=1,2,3,\dots$$

$$b_n = \frac{1}{\ell} \int_{-\ell}^{\ell} f(x) \sin \frac{n\pi x}{\ell} dx, \quad n=1,2,3,\dots$$

Juft funksiya uchun Furye qatori:

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos \frac{n\pi x}{\ell}; \quad b_n = 0, \quad a_n = \frac{2}{\ell} \int_0^{\ell} f(x) \cos \frac{n\pi x}{\ell} dx.$$

Toq funksiyalar uchun Furye qatori:

$$f(x) = \sum_{n=1}^{\infty} b_n \sin \frac{n\pi x}{\ell}; \quad a_n = 0, \quad b_n = \frac{2}{\ell} \int_0^{\ell} f(x) \sin \frac{n\pi x}{\ell} dx.$$

7-§. KARRALI, EGRI ChIZIQLI INTEGRALLAR

1. $\iint_D f(x,y) dx dy$ ifodaga ikki o'lchovli integral deyiladi.

Agar D soha $a \leq x \leq b$, $f_1(x) \leq y \leq f_2(x)$ da o'zgarsa, ikki o'lchovli integralni hisoblash $\iint_D f(x,y) dx dy = \int_a^b dx \int_{f_1(x)}^{f_2(x)} f(x,y) dy$ ko'rinishdagi ikki karrali integralni hisoblashga olib kelinadi.

Agar D soha $c \leq y \leq d$, $\varphi_2(y) \leq x \leq \varphi_1(y)$ da o'zgarsa, ikki o'lchovli integralni hisoblash $\iint_D f(x,y) dx dy = \int_c^d dy \int_{\varphi_2(y)}^{\varphi_1(y)} f(x,y) dx$

ko'rinishdagi ikki karrali integralni hisoblashga olib kelinadi.

$\int_c^d dy \int_{\varphi_2(y)}^{\varphi_1(y)} f(x,y) dx = \int_{\varphi_2(y)}^{\varphi_1(y)} dx \int_c^d f(x,y) dy$. Bu erda $y = \varphi_{1,2}^{-1}(x)$

funksiya $x = \varphi_{1,2}(y)$ funksiyaga teskari funksiyadir.

Bu tenglik bilan integrallash tartibini o'zgartirish mumkin.

2. Ω sohada aniqlangan $f(x,y,z)$ funksiyadan olingan uch o'lchovli integralni hisoblash

$$\iiint_{\Omega} f(x,y,z) dx dy dz = \iint_{\Omega} dx dy \int_{\varphi_1(x,y)}^{\varphi_2(x,y)} f(x,y,z) dz$$

integralni hisoblashga keltiriladi, bu erda, Ω_{xy} Ω – sohaning XΟY-teklislikdagi proeksiysi, $z=\psi_1(x,y)$ va $z=\psi_2(x,y)$ lar Ω soxani yuqorida va pastdan chegaralagan sirtlar tenglamalari. Ikki o'lchovli integralga o'xshash uch o'lchovli integralda ham integrallash tartibini o'zgartirish mumkin.

3. Birinchi tur egri chiziqli integral $\int_{(L)} f(x,y,z) ds$ berilgan

bo'lib, agar L egri chiziq $x=x(t)$, $y=y(t)$, $z=z(t)$ ($\alpha \leq t \leq \beta$) parametrik holda berilgan bo'lsa, unda,

$$\int_{(L)} f(x,y) ds = \int_{\alpha}^{\beta} f(x(t),y(t),z(t)) \cdot \sqrt{x'^2(t) + y'^2(t) + z'^2(t)} dt$$

bo'ladi.

Ikkinchisi tur egri chiziqli integral $\int_{(L)} P(x,y,z) dx + Q(x,y,z) dy + R(x,y,z) dz$ berilgan bo'lib, agar

egri chiziq $x=x(t)$, $y=y(t)$, $z=z(t)$ ($\alpha \leq t \leq \beta$) parametrik holda berilgan bo'lsa, u holda

$$\begin{aligned}
 & \int_{\Omega} P(x, y, z) dx + Q(x, y, z) dy + R(x, y, z) dz = \text{...} \\
 (\text{L}) \quad & = \int_{\Omega} P(x(t), y(t), z(t)) x'(t) dt + Q(x(t), y(t), z(t)) y'(t) dt + \\
 & + R(x(t), y(t), z(t)) z'(t) dt \\
 & \text{bo'ldi.}
 \end{aligned}$$

4. Uch o'lchovli integrallar yordamida:

a) jismning V hajmi va uning M massasi quyidagi formula yordamida hisoblanadi:

$$M = \iiint_{\Omega} \mu(x, y, z) dx dy dz, \quad V = \iiint_{\Omega} dx dy dz, \quad \text{bu erda, } \mu$$

jism massasining zichligi;

b) bir jinsli jism inersiya momenti (masalan, OZ o'qi bo'yicha) quyidagi formula yordamida hisoblanadi:

$$J_z = \iiint_{\Omega} (x^2 + y^2) dx dy dz.$$

8-§. KOMPLEKS O'ZGARUVCHILI FUNKSIYALAR NAZARIYASI

Agar xar bir $z=x+iy$ kompleks songa biror qonun yordamida bir yoki bir necha kompleks son $w=u+iv$ mos qo'yilgan bo'lsa,

$$w = f(z) = u+iv = u(x,y) + iv(x,y)$$

kompleks O'zgaruvchili funksiya berilgan deyiladi.

Agar $w = f(z)$ funksiya uzuksiz hosilaga ega bo'lsa, bu funksiyani analitik deyishadi. Analitiklikni tekshirish uchun quyidagi etarli va zaruriy shart mavjud:

$$\frac{\partial u(x, y)}{\partial x} = \frac{\partial v(x, y)}{\partial y}, \quad \frac{\partial u(x, y)}{\partial y} = -\frac{\partial v(x, y)}{\partial x}$$

Bu shartlar bajarilganda hosila quyidagi formula yordamida topiladi:

$$f'(z) = \frac{\partial u}{\partial x} + i \frac{\partial v}{\partial x} = \frac{\partial v}{\partial y} - i \frac{\partial u}{\partial y} = \frac{\partial u}{\partial x} - i \frac{\partial u}{\partial y} = \frac{\partial v}{\partial y} + i \frac{\partial v}{\partial x}$$

9-§. EHTIMOLLAR NAZARIYASI

Ehtimollar nazariyasining asosiy tushunchalaridan biri bo'lmish hodisa deb sinov (tajriba) o'tkazish natijasida, ya'ni malum shartlar majmui amalga oshishi natijasida ro'y berishi mumkin bo'lgan har qanday faktga aytildi. Tajribaning natijasi bir qiyatli aniqlanmagan hollarda hodisa – tasodifiy hodisa deb ataladi, tajriba esa tasodifiy tajriba deb ataladi. Tasodifiy tajribalar haqida so'z yuritganimizda biz faqat etarlicha ko'p marta takrorlash mumkin bo'lgan (hech bo'lmaganada nazari jihatdan) tajribalarni ko'zda tutamiz. Tasodifiy tajribaning matematik modelini qurish quyidagi etaplarni o'z ichiga oladi:

- a) elementar hodisalar to'plami Ω - ni tuzish;
- b) berilgan tajriba uchun etarli bo'lgan hodisalar sinfi \mathcal{R} ni ajratish;
- v) shu hodisalar sinfi ustida ma'lum shartlarni qanoatlantiruvchi sonli funksiya P – hodisaning ehtimolini berish.

Hosil bo'lgan (Ω, \mathcal{R}, P) – uchlikni ehtimollar fazosi deb ataymiz. Ω – elementar hodisalar to'plami deb berilgan tasodifiy tajribada ro'y berishi mumkin bo'lgan barcha bir-birini rad etuvchi hodisalar to'plamiga aytildi. Ω – ning elementlari ω_i , $i=1, 2, \dots, n$ bilan belgilanadi. n – esa Ω – to'plam elementlarining soni.

Ehtimollik hodisadan olingan sonli funksiya. Haqiqiy o'zgaruvchili funksiylar argumentining barcha qiyamatlarida aniqlangan bo'lishi shart bo'lmaganligi kabi, Ω to'plamning ixtiyoriy to'plam ostlari uchun ehtimolni aniqlash har doim xam mumkin bo'lmaydi. To'plam ostlari sinflarini cheklashga to'g'ri kelgan hollarda, biz bu sinflardan hodisalar ustidagi amallarga nisbatan yopiqligini talab etamiz.

\mathcal{R} hodisalar sinfini shu shartlarni nazarda tutgan holda, Ω to'plamning to'plam ostlaridan tuzamiz.

P ehtimollik tasodifiy hodisadan olingan sonli funksiya bo'lib, u hodisaning ro'y berish imkonining obektiv darajasining sonli xarakteristikasidir.

Murakkab hodisa yoki oddiygina hodisa deb Ω – elementar hodisalar to'plamining ixtiyoriy to'plam ostiga aytildi.

Hodisalar uch turga ajratiladi: muqarrar, ro'y bermaydigan va tasodifiy hodisalar.

2. Ehtimolning klassik ta'rifi: A hodisaning ehtimoli deb, tajribaning bu hodisani ro'y berishiga qulaylik tug'diruvchi elementar hodisalari soni m ning, tajribaning barcha mumkin bo'lgan teng imkoniyatli elementar hodisalari soni n ga nisbatiga aytamiz:

$$P(A) = \frac{m}{n}$$

8. Hodisaning nisbiy chastotasi:

Hodisa ro'y bergen natijalar sonining aslida o'tkazilgan jami tajribalar soniga nisbatiga hodisaning nisbiy chastotasi deyiladi:

$$W(A) = \frac{M}{N}$$

bu erda, M – hodisalarning ro'y berish soni;
 N – tajribalarning jami soni.

8. Ehtimolning geometrik ta'rifi:

Ω - n o'lchovli Evklid fazosining cheklangan to'plami bo'lsin. Hodisa deb Ω ning o'lchovini aniqlab bo'ladigan to'plam ostini qaraymiz. R'deb Ω ning barcha o'lchovga ega bo'lgan to'plam ostlari sinfini belgilaymiz. U holda A hodisaning ehtimoli deb quyidagi aytamiz:

$$P(A) = \frac{\mu(A)}{\mu(\Omega)}$$

bu erda, $\mu(A)$ – A to'plamning o'lchami. ($n=1$ bo'lganda uzunlik, $n=2$ bo'lganda yuza, $n=3$ bo'lganda hajm).

8. Shartli ehtimollik:

A hodisaning B hodisa ro'y berdi degan shart ostida hisoblangan ehtimolligi A hodisaning $P(B) > 0$ dagi shartli ehtimollik deb ataladi va $P(A/B)$ bilan belgilanadi:

$$P(A/B) = \frac{P(AB)}{P(B)}$$

Bundan esa ehtimolliklarni ko'paytirish formulasi kelib chiqadi:

$$P(AB) = P(B)P(A/B).$$

8. To'la ehtimollik formulasi.

A_1, A_2, \dots, A_n lar birgalikda bo'lmagan hodisalarning to'la guruhini tashkil etsin va barcha k-lar uchun $R(A_k) > 0$ bo'lsin. U holda,

$$P(B) = \sum_{k=1}^n P(A_k) \cdot P(B/A_k).$$

8. Hodisalarning bog'liqsizligi:

Agar $P(B) > 0$ va $P(A/B) = P(A)$ bo'lsa A hodisa B hodisaga bog'liq emas deyiladi. Bundan esa, o'zaro bog'liq bo'lmagan A va B hodisalar uchun $P(AB)=P(A)P(B)$ tenglik kelib chiqadi.

8. $P_n(k) = \frac{n!}{k!(n-k)!} p^k q^{n-k}$ Bernulli formulasi. Bu erda

$P_n(k)$ – A hodisaning n-ta tajribada k- marta ro'y berish ehtimoli, p-esa A hodisaning bitta tajribada ro'y berish ehtimoli: $q=1-p$.

9. Diskret tasodifiy miqdor deb, ko'pi bilan sanoqli sondagi qiymatlarni ma'lum ehtimollik bilan qobil qiladigan miqdorga aytildi. Uzlusiz tasodifiy miqdor deb, chekli yoki cheksiz oraliqdagi barcha qiymatlarni qobil qilishi mumkin bo'lgan miqdorga aytildi. Tasodifiy miqdorning qobil qiladigan qiymatlari bilan ularning ehtimollari orasidagi munosabatga tasodifiy miqdorning taqsimot qonuni deyiladi.

6. Diskret tasodifiy miqdorning matematik kutilmasi deb quyidagi tenglik bilan aniqlanadigan skalyar kattalikka aytildi:

$$M(X)=x_1p_1+x_2p_2+\dots+x_np_n$$

bu erda x_1, x_2, \dots, x_n – tasodifiy miqdorning mumkin bo'lgan qiymatlari, p_1, p_2, \dots, p_n – mos ehtimolliklar.

$$D(X)=M(x^2)-[M(x)]^2$$

ifodaga dispersiya deyiladi.

$$\sigma(X) = \sqrt{D(X)}$$

ifodaga o'rta kvadratik chetlashish deyiladi.

10. X tasodifiy miqdorning o'z matematik kutilmasidan chetlanishi absolyut qiymat bo'yicha ε musbat sondan kichik bo'lishi etimoli $1 - \frac{D(X)}{\varepsilon^2}$ dan kichik emas, ya'ni

$$P(|X - M(X)| < \varepsilon) \geq 1 - \frac{D(X)}{\varepsilon^2}$$

Bu Chebishev tengsizligi deyiladi.

10-§. MATEMATIK STATISTIKA ELEMENTLARI

Statistika tabiatda va jamiyatda bo'ladijan ommaviy hodisalarni o'rganadi. Matematik statistikaning vazifasi statistik ma'lumotlarni to'plash, ularni tahlil qilish va shu asosda xulosalar chiqarishdan iborat.

Biror bir to'plamdan tasodifiy ravishda tanlab olingan ob'ektlar to'plamiga tanlanma deyiladi.

Tanlanma ajratiladigan ob'ektlar to'plami bosh to'plam deyiladi. Tanlanmaning hajmi deb, shu tanlanmadagi ob'ektlar soniga aytildi.

Olingan ob'ekt kuzatish o'tkazilgandan keyin bosh to'plamga qaytarilsa takror tanlanma, qaytarilmasa notakror tanlanma deyiladi.

Biror X bosh to'plamdan x_1, x_2, \dots, x_n - tanlanma olingan bo'lsin. Agar x_1, x_2, \dots, x_n larni $x_1 \leq x_2 \leq \dots \leq x_n$ kabi o'sish tartibida joylashtirsak, x_1, x_2, \dots, x_n variatsion qator hosil bo'ladi. Tanlanmaning elementlari variantalar deyiladi. Variantalarning har biri bir necha bor takrorlanishi mumkin:

x_1 varianta n_1 marta, x_2 varianta n_2 marta, ..., x_k varianta n_k marta takrorlansin va $n = n_1 + n_2 + \dots + n_k$ bo'lsin, n_1, n_2, \dots, n_k sonlar chastotalar deyiladi.

Har bir chastotaning tanlanma hajmi n_i ga nisbati shu variantaning nisbiy chastotasi deyiladi:

$$w_i = \frac{n_i}{n}, \quad i = 1, k :$$

$$X: x_1, x_2, \dots, x_k;$$

$$W: w_1, w_2, \dots, w_k;$$

jadval X tasodifiy miqdorning statistik yoki empirik taqsimoti deyiladi.

Variantalarning x sonidan kichik bo'lgan qiymatlarining nisbiy chastotasi

$$F_n(x) = \frac{m(x)}{n}$$

empirik taqsimot funksiya deyiladi. Chastotalar poligoni deb, $(x_1, n_1); (x_2, n_2); \dots; (x_k, n_k)$ nuqtalarni tutashtiruvchi siniq chiziqqa aytildi. Nisbiy chastotalar poligoni deb esa, $(x_1, w_1); (x_2, w_2); \dots; (x_k, w_k)$ nuqtalarni tutashtiruvchi siniq chiziqqa aytildi. Chastotalar gistogrammasi deb, asoslari huzunlikdagi intervallar, balandliklari esa, n_i -dan iborat bo'lgan to'g'ri to'rtburchaklardan iborat pog'onasimon shaklga aytildi, bu erda h-bosh to'plamning kuzatiladigan qiymatlarini o'z ichiga olgan interval uzunligi, n_i - intervalga tushgan variantalar soni. Matematik statistika o'rganadigan masalalardan biri - taqsimotning turli sonli xarakteristikalarini nuqtaviy baholashdan iborat. Nuqtaviy baho deb, bitta son bilan aniqlanadigan statistik bahoga aytildi.

Tanlanmaning o'rta arifmetik qiymati:

$$\bar{X} = \frac{\sum_{i=1}^n x_i}{n}$$

bo'ladi, tanlanma dispersiyasi deb,

$$\sigma^2 = \frac{\sum_{i=1}^n n_i (x_i - \bar{X})^2}{\sum_{i=1}^n n_i}$$

ifodaga aytildi. Bundan tashqari intervalli baholar ham qaraladi. Intervalli baho deb baholanayotgan parametrni qoplaydigan intervalning uchlari bo'lgan ikki son bilan aniqlanadigan bahoga aytildi.

Statistik gipoteza deb, noma'lum taqsimotning ko'rinishi yoki ma'lum taqsimodlarning parametrlari haqidagi gipotezaga aytildi. Gipotezalarni tekshirishda birinchi tur xatolik shundan iboratki, bunda, to'g'ri gipoteza rad qilinadi. Ikkinci tur xatolik shundan iboratki, bunda, noto'g'ri gipoteza qabul qilinadi.

Statistik kriteriy (yoki oddiygina kriteriy) deb, nolinchgi gipotezani tekshirish uchun xizmat qiladigan tasodifiy miqdorga aytildi. Bosh to'plamning normal taqsimlanganligi haqidagi gipotezani tekshirishda quyidagi Pirson kriteriyasi ishlatalidi:

$$\chi^2 = \sum \frac{(n_i - n'_i)^2}{n'_i}.$$

Pirson kriteriyasi yordamida empirik chastotalar n_i va nazariy chastotalar n'_i -lar taqqoslanadilar.

Agar X tasodifiy miqdorning har bir qiymatiga biror qonun asosida Y tasodifiy miqdorning taqsimoti yoki sonli xarakteristikasi mos kelsa, u holda X va Y orasidagi munosabat statistik yoki korrelyatsion munosabat deyiladi. Bu munosabatni jadval ko'rinishda ifodalash mumkin.

Bog'liqlik miqdori bo'lgan korrelyatsion koefitsientini

$$r_{xy} = \frac{\sum x_i \cdot y_i - n \cdot \bar{x} \cdot \bar{y}}{n \cdot \sigma_x \sigma_y}$$

formula yordamida topish mumkin.

II BOB. YOZMA ISH VARIANTLARINING NAMUNAVIY YECHIMLARI

1-§. BIRINChI YOZMA ISH

1. Biror bazisda $\vec{a}(a_1, a_2, a_3)$, $\vec{b}(b_1, b_2, b_3)$, $\vec{c}(c_1, c_2, c_3)$ va $\vec{d}(d_1, d_2, d_3)$ vektorlar berilgan. $\vec{a}, \vec{b}, \vec{c}$ vektorlar bazis tashkil etishini ko'rsating va bu bazisda \vec{d} vektorning koordinatalarini toping.

Berilishi:

$$\vec{a}(1;-2;3), \vec{b}(4;7;2), \vec{c}(6;4;2), \vec{d}(14;18;6).$$

\vec{a}, \vec{b} va \vec{c} -lar bazis tashkil etishi uchun ular nokomplanar bo'lishlari kerak.

Agarda $\vec{a} \cdot \vec{b} \cdot \vec{c} \neq 0$ bo'lsa, $\vec{a}, \vec{b}, \vec{c}$ vektorlar nokomplanar bo'ladilar. Shuni tekshiramiz:

$$\vec{a} \cdot \vec{b} \cdot \vec{c} = \begin{vmatrix} 1 & -2 & 3 \\ 4 & 7 & 2 \\ 6 & 4 & 2 \end{vmatrix} = 14 - 24 + 48 - 126 + 16 - 8 = -80 \neq 0$$

Demak, $\vec{a}, \vec{b}, \vec{c}$ - vektorlar bazis tashkil etadi. \vec{d} vektorning $\vec{a}, \vec{b}, \vec{c}$ bazisdagi yoyilmasi $\vec{d} = \lambda_1 \vec{a} + \lambda_2 \vec{b} + \lambda_3 \vec{c}$ ko'rinishda bo'лади. Bunga $\vec{a}, \vec{b}, \vec{c}$ va \vec{d} vektorlarning koordinatalarining qiymatlarini qo'yib quyidagini topamiz:

$$(14;18;6) = \lambda_1(1;-2;3) + \lambda_2(4;7;2) + \lambda_3(6;4;2);$$

$$(14;18;6) = (\lambda_1 + 4\lambda_2 + 6\lambda_3, -2\lambda_1 + 7\lambda_2 + 4\lambda_3, 3\lambda_1 + 2\lambda_2 + 2\lambda_3)$$

$$\begin{cases} \lambda_1 + 4\lambda_2 + 6\lambda_3 = 14 \\ -2\lambda_1 + 7\lambda_2 + 4\lambda_3 = 18 \\ 3\lambda_1 + 2\lambda_2 + 2\lambda_3 = 6 \end{cases} \Rightarrow \begin{cases} \lambda_1 + 4\lambda_2 + 6\lambda_3 = 14 \\ 15\lambda_2 + 16\lambda_3 = 46 \\ 10\lambda_2 + 16\lambda_3 = 36 \end{cases}$$

$$\Rightarrow \begin{cases} \lambda_1 + 4\lambda_2 + 6\lambda_3 = 14 \\ 15\lambda_2 + 16\lambda_3 = 46 \\ 5\lambda_2 = 10 \end{cases} \Rightarrow \begin{cases} \lambda_1 = 0 \\ \lambda_2 = 2 \\ \lambda_3 = 1 \end{cases}$$

Javob: $\vec{d} = 2\vec{b} + \vec{c}$

2. $A_1A_2A_3A_4$ piramida uchlarining koordinatalari berilgan.

Toping:

- 1) A_1A_2 qirrasining uzunligini.
- 2) A_1A_2 va A_1A_4 qirralari orasidagi burchagini.
- 3) A_1A_4 qirrasi bilan $A_1A_2A_3$ yoqlar orasidagi burchagini.
- 4) $A_1A_2A_3$ yoqlar yuzasini.
- 5) Piramida hajmini.
- 6) A_1A_2 qirrasi yotgan to'g'ri chiziq tenglamasini.
- 7) $A_1A_2A_3$ tekisligining tenglamasini.
- 8) A_4 uchidan $A_1A_2A_3$ yoqqa tushirilgan balandlik tengamasini.

Berilgan: $A_1(6,6,5)$, $A_2(4,9,5)$, $A_3(4,6,11)$, $A_4(6,9,3)$

$$1) \frac{\overrightarrow{A_1A_2}}{|A_1A_2|} = \{4-6 \quad 9-6 \quad 5-5\} = \{-2;3;0\};$$

$$|A_1A_2| = \sqrt{(-2)^2 + 3^2 + 0^2} = \sqrt{13};$$

$$2) \frac{\overrightarrow{A_1A_4}}{|A_1A_4|} = \{-2;3;0\};$$

$$|A_1A_4| = \{6-6 \quad 9-6 \quad 3-5\} = \{0;3;-2\};$$

$$\cos(\overrightarrow{A_1A_2}, \overrightarrow{A_1A_4}) = \frac{\overrightarrow{A_1A_2} \cdot \overrightarrow{A_1A_4}}{|A_1A_2| |A_1A_4|} = \frac{0 \cdot (-2) + 3 \cdot 3 + (-2) \cdot 0}{\sqrt{(-2)^2 + 3^2 + 0^2} \sqrt{0^2 + 3^2 + (-2)^2}} = \frac{9}{13};$$

$$\hat{\overrightarrow{A_1A_2}, \overrightarrow{A_1A_4}} = \arccos \frac{9}{13} \approx 46^{\circ} 2';$$

3) A_1 va A_4 nuqtalardan o'tuvchi to'g'ri chiziq tenglamasi:

$$\frac{x-x_1}{x_4-x_1} = \frac{y-y_1}{y_4-y_1} = \frac{z-z_1}{z_4-z_1}$$

$$\text{Bundan } \frac{x-6}{6-6} = \frac{y-6}{9-6} = \frac{z-5}{3-5} \Rightarrow \frac{x-6}{0} = \frac{y-6}{3} = \frac{z-5}{-2}$$

kelib chiqadi.

Bu to'g'ri chiziqning yo'naltiruvchi vektori $\vec{S} = \{0;3;-2\}$.

A_1, A_2, A_3 nuqtalardan o'tuvchi tekislik tenglamasi:

$$\begin{vmatrix} x-x_1 & y-y_1 & z-z_1 \\ x_2-x_1 & y_2-y_1 & z_2-z_1 \\ x_3-x_1 & y_3-y_1 & z_3-z_1 \end{vmatrix} = 0$$

Bundan,

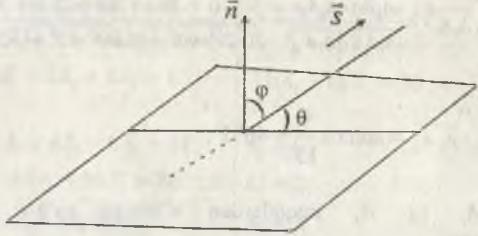

$$\begin{vmatrix} x-6 & y-6 & z-5 \\ 4-6 & 9-6 & 5-5 \\ 4-6 & 6-6 & 11-5 \end{vmatrix} = \begin{vmatrix} x-6 & y-6 & z-5 \\ -2 & 3 & 0 \\ -2 & 0 & 6 \end{vmatrix} =$$

$$= 18(x-6) + 6(z-5) + 12(y-6) =$$

$$= 18x + 12y + 6z - 210 = 0. \text{ yoki}$$

$6x + 4y + 2z - 70 = 0$ kelib chiqadi.

Bu tekislikning normali: $\vec{n} = \{6;4;2\}$.

1-chizma

\vec{n} va \vec{s} orasidagi burchak φ quyidagicha topiladi:

$$\cos \varphi = \frac{\vec{n} \cdot \vec{s}}{|\vec{n}| \cdot |\vec{s}|};$$

A_1A_4 va $A_1A_2A_3$ lar orasidagi burchak θ quyidagicha topiladi:

$$\theta = 90^\circ - \varphi \Rightarrow \varphi = 90^\circ - \theta;$$

$$\cos \varphi = \cos(90^\circ - \theta) = \sin \theta;$$

Demak, $\sin \theta = \frac{\vec{n} \cdot \vec{s}}{|\vec{n}| \cdot |\vec{s}|};$

$$\sin \theta = \frac{0 \cdot 6 + 3 \cdot 4 + (-2) \cdot 2}{\sqrt{0^2 + 3^2 + (-2)^2} \cdot \sqrt{6^2 + 4^2 + 2^2}} = \frac{8}{\sqrt{56} \cdot \sqrt{13}} = \frac{8}{\sqrt{578}};$$

$$\theta = \arcsin \frac{8}{\sqrt{578}};$$

4) $A_1A_2A_3$ ning yuzini quyidagi formuladan topamiz:

$$S_{A_1A_2A_3} = \frac{1}{2} |\overrightarrow{A_1A_2} \times \overrightarrow{A_1A_3}|; \quad \overrightarrow{A_1A_2} = \{-2; 3; 0\},$$

$$\overrightarrow{A_1A_3} = \{4 - 6 \quad 6 - 6 \quad 11 - 5\} = \{-2; 0; 6\},$$

$$\overrightarrow{A_1A_2} \times \overrightarrow{A_1A_3} = \begin{vmatrix} \vec{i} & \vec{j} & \vec{k} \\ -2 & 3 & 0 \\ -2 & 0 & 6 \end{vmatrix} = \vec{i} \cdot \begin{vmatrix} 3 & 0 \\ 0 & 6 \end{vmatrix} - \vec{j} \cdot \begin{vmatrix} -2 & 0 \\ -2 & 6 \end{vmatrix} + \vec{k} \cdot \begin{vmatrix} -2 & 3 \\ -2 & 0 \end{vmatrix} =$$

$$= 18\vec{i} + 12\vec{j} + 6\vec{k};$$

$$S_{A_1A_2A_3} = \frac{1}{2} |18\vec{i} + 12\vec{j} + 6\vec{k}| = \frac{1}{2} \sqrt{18^2 + 12^2 + 6^2} \approx 11,22.$$

5) Piramidaning hajmini quyidagi formuladan topamiz.

$$V = \frac{1}{6} |\overrightarrow{A_1A_2} \cdot \overrightarrow{A_1A_3} \cdot \overrightarrow{A_1A_4}| = \frac{1}{6} \begin{vmatrix} -2 & 3 & 0 \\ -2 & 0 & 6 \\ 0 & 3 & -2 \end{vmatrix} = \frac{1}{6} |36 - 12| = \frac{24}{6} = 4.$$

6) A_1, A_2 nuqtalardan o'tuvchi to'g'ri chiziq tenglamasi:

$$\frac{x - x_1}{x_2 - x_1} = \frac{y - y_1}{y_2 - y_1} = \frac{z - z_1}{z_2 - z_1}$$

yoki

$$\frac{x - 6}{4 - 6} = \frac{y - 6}{9 - 6} = \frac{z - 5}{5 - 5} \Rightarrow \frac{x - 6}{-2} = \frac{y - 6}{3} = \frac{z - 5}{0};$$

7) $A_1A_2A_3$ - tekislik tenglamasi 3-bo'limda topildi:

$$6x + 4y + 2z - 70 = 0.$$

3) A_4 uchidan $A_1A_2A_3$ yoqqqa tushurilgan balandlik tenglamasini

træng. $A_4(6,9,3)$

$A_1 A_2 A_3$ - ning tenglamasi: $6x + 4y + 2z - 70 = 0$.

$\vec{n} = \{6, 4, 2\}$ - tekislikning normali.

A_4 - nuqtadan o'tib yo'naltiruvchisi $\bar{S} = \{m; n; l\}$ - bo'lgan to'g'ri chiziqning tenglamasi.

$$\frac{x-6}{m} = \frac{y-9}{n} = \frac{z-3}{l};$$

To'g'ri chiziq bilan tekislikning perpendikulyarligidan $\vec{n} \parallel \bar{S}$ ligi kelib chiqadi va m, n va l lar 6,4,2 larga proporsional bo'ladi. Shuning uchun izlangan balandlik tenglamasi:

$$\frac{x-6}{6} = \frac{y-9}{4} = \frac{z-3}{2} \text{ bo'ladi.}$$

3. Berilgan chiziqli tenglamalar sistemasining birlgiligidagini ko'rsating va uni eching.

Berilishi:

$$\begin{cases} x_1 + x_2 - x_3 = 1 \\ 8x_1 + 3x_2 - 6x_3 = 2 \\ 4x_1 + x_2 - 3x_3 = 3 \end{cases}$$

Sistema birlgilida bo'lishi uchun asosiy determinant $\Delta \neq 0$ bo'lishi kerak.

$$\Delta = \begin{vmatrix} 1 & 1 & -1 \\ 8 & 3 & -6 \\ 4 & 1 & -3 \end{vmatrix} = -9 - 24 - 8 + 12 + 24 + 6 = 1 \neq 0.$$

Demak, sistema birlgilida va yagona yechimga ega.

Kramer usuli:

Yechimlar quyidagi formulalar orqali topiladi:

$$x_1 = \frac{\Delta x_1}{\Delta}; x_2 = \frac{\Delta x_2}{\Delta}; x_3 = \frac{\Delta x_3}{\Delta}$$

$$\Delta x_1 = \begin{vmatrix} 1 & 1 & -1 \\ 8 & 3 & -6 \\ 4 & 1 & -3 \end{vmatrix} = -9 - 18 - 2 + 9 + 6 + 6 = -8;$$

$$\Delta x_2 = \begin{vmatrix} 1 & 1 & -1 \\ 1 & 8 & -6 \\ 4 & 3 & -3 \end{vmatrix} = -6 - 24 - 24 + 8 + 18 + 24 = -4;$$

$$\Delta x_3 = \begin{vmatrix} 1 & 1 & 1 \\ 8 & 3 & 2 \\ 4 & 1 & 3 \end{vmatrix} = 9 + 8 + 8 - 12 - 2 - 24 = 25 - 38 = -13;$$

$$x_1 = \frac{\Delta x_1}{\Delta} = \frac{-8}{-1} = 8; \quad x_2 = \frac{\Delta x_2}{\Delta} = \frac{-4}{-1} = 4; \quad x_3 = \frac{\Delta x_3}{\Delta} = \frac{-13}{-1} = 13;$$

Javob: $x_1 = -8, x_2 = -4, x_3 = 13$.

Gauss usuli:

$$\begin{cases} x_1 + x_2 - x_3 = 1 \\ 8x_1 + 3x_2 - 6x_3 = 2 \\ 4x_1 + x_2 - 3x_3 = 3 \end{cases} \Rightarrow \begin{cases} x_1 + x_2 - x_3 = 1 \\ 5x_2 - 2x_3 = 6 \\ 3x_2 - x_3 = 1 \end{cases} \Rightarrow$$

$$\Rightarrow \begin{cases} x_1 + x_2 - x_3 = 1 \\ 5x_2 - 2x_3 = 6 \\ x_2 = -4 \end{cases} \Rightarrow \begin{cases} x_1 + x_2 - x_3 = 1 \\ 5 \cdot (-4) - 2 \cdot x_3 = 6 \\ x_2 = -4 \end{cases} \Rightarrow \begin{cases} x_1 = -8 \\ x_3 = -13 \\ x_2 = -4 \end{cases}$$

(1): Ikkinchchi qator o'rniiga, shu qatordan, birinchi qatorni 8 ga ko'paytirib ayirilgan natijani yozamiz.

(2): Uchinchi qator o'tniga, shu qatorni 3 ga ko'paytirib ikkinchi qatorni ayirilganini yozamiz. Natijada $x_2 = -4$ qiymat hosil bo'ladi.

(3): Topilgan $x_2 = -4$ qiymatni ikkinchi qatorga qo'yib $x_3 = -13$ qiymatni topamiz.

(4): Topilgan $x_2 = -4$ va $x_3 = -13$ qiymatlarni birinchi qatorga qo'yib $x_1 = -8$ qiymatni topamiz.

Javob: $x_1 = -8$, $x_2 = -4$, $x_3 = -13$.

4. Berilgan matritsaning xos son va xos vektorlarini toping:

$$\begin{pmatrix} 1 & 1 & 3 \\ 1 & 5 & 1 \\ 3 & 1 & 1 \end{pmatrix}$$

Xarakteristik tenglamasini tuzamiz:

$$\begin{vmatrix} 1-\lambda & 1 & 3 \\ 1 & 5-\lambda & 1 \\ 3 & 1 & 1-\lambda \end{vmatrix} = 0 \text{ yoki } (\lambda+2) \cdot (-\lambda^2 + 9\pi - 18) = 0.$$

Bundan $\lambda_1 = -2$, $\lambda_2 = 3$, $\lambda_3 = 6$ xos sonlarni hosil qilamiz.

Endi, $\lambda_1 = -2$ xos songa mos keluvchi xos vektorni topamiz:

Buning uchun quyidagi tenglamalar sistemasini tuzamiz va echanizmiz:

$$\begin{cases} [1 - (-2)] \cdot x_1 + x_2 + 3x_3 = 0 \\ x_1 + [5 - (-2)] \cdot x_2 + x_3 = 0 \\ 3x_1 + x_2 + [1 - (-2)] \cdot x_3 = 0 \end{cases}$$

yoki

$$\begin{cases} 3x_1 + x_2 + 3x_3 = 0 \\ x_1 + 7x_2 + x_3 = 0 \\ 3x_1 + x_2 + 3x_3 = 0 \end{cases}$$

Bu sistemada birinchi va uchinchi tenglamalar bir xil bo'lgani uchun, bittasini tashlab yozamiz:

$$\begin{cases} 3x_1 + x_2 + 3x_3 = 0 \\ x_1 + 7x_2 + x_3 = 0 \end{cases} \Rightarrow \begin{cases} 3(x_1 + x_3) = -x_2 \\ x_1 + x_3 = -7x_2 \end{cases}$$

Bundan biz quyidagini hosil qilamiz:

$$\begin{cases} x_1 + x_3 = -\frac{x_2}{3} \\ x_1 + x_3 = -7x_2 \end{cases}$$

Chap tomonlar tengligidan, o'ng tomonlar ham teng bo'lishi kerak. Bu esa, faqat $x_2 = 0$ bo'lganda to'g'ri bo'ladi. Bundan esa $x_1 = -x_3$ ekanligi kelib chiqadi. Bu erda, x_3 ni erkli o'zgaruvchi deb olamiz. $x_3 = 1$ desak $x_1 = -1$, $x_2 = 0$. ya'ni $\bar{v}_1(-1;0;1)$ xos vektorni olamiz. $\lambda_2 = 3$ va $\lambda_3 = 6$ xos sonlar uchun ham shu usulda xos vektorlarni topamiz: $\bar{v}_2(1;-1;1)$, $\bar{v}_3(1;2;1)$.

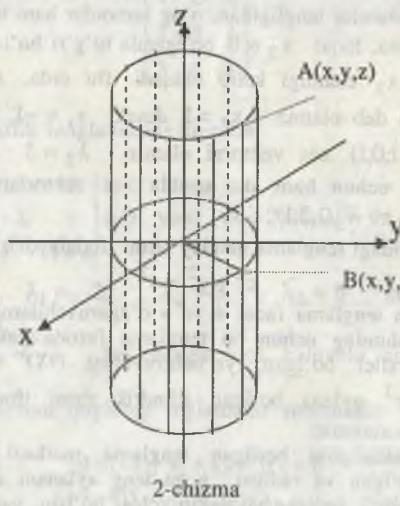

5. Quyidagi tenglama qanday sirtni ifodalaydi?:

$$x^2 + y^2 = r^2.$$

Berilgan tenglama faqat x va y o'zgaruvchilarni o'z ichiga olgan va shuning uchun bu tenglama fazoda yasovchisi OZ o'qiga parallel bo'lgan, yo'naltiruvchisi OXY tekisligidagi $x^2 + y^2 = r^2$ aylana bo'lgan silindrik sirtni ifodalaydi. Bu xulosani asoslaymiz:

OXY tekisligida berilgan tenglama markazi koordinata boshida bo'lgan va radiusi r ga teng aylanani aniqlaydi. Bu aylana silindrik sirtning yo'naltiruvchisi bo'lsin, yasovchisi esa OZ o'qiga parallel. Silindrda ixtiyoriy A(x,y,z) nuqtani olamiz va uni OXY tekisligiga proeksiyalaymiz. Koordinatalari $x,y,0$ bo'lgan B proeksiya nuqta yo'naltiruvchi vazifasini bajaruvchi aylana ustiga tushadi va shuning uchun ham uning

koordinatalari x , y lar aylana tenglamasi $x^2 + y^2 = r^2$ ni qanoatlantiradilar. Lekin silindrik sirdagi $A(x,y,z)$ nuqtanining absissasi ham, ordinatasi ham aylanadagi $B(x,y,0)$ nuqtanining absissasi va ordinatasi bilan aynan bir xil bo'lganlari uchun, $x^2 + y^2 = r^2$ tenglama OZ o'zgaruvchini o'z ichiga olmaganini xisobga olgan holda, shuni aytish mumkinki, bu tenglamani silindrik sirda yotuvchi ixtiyoriy $A(x,y,z)$ nuqta koordinatalari ham qanoatlantiradi. Shunday qilib, berilgan $x^2 + y^2 = r^2$ tenglama fazoda to'g'ri aylanma silindrnii aniqlaydi. Bu silindr yasovchisi OZ o'qiga parallel yo'naltiruvchisi esa OXY tekisligida yotuvchi $x^2 + y^2 = r^2$ aylanadir (2-chizma).

6. Lopital qoidasidan foydalanmay quyidagi funksiyalarning limitini hisoblang:

a) $\lim_{x \rightarrow \infty} \frac{x - 2x^2 + 5x^4}{2 + 3x^2 + x^4} = \frac{\infty}{\infty}$ ko'rinishdagi aniqmaslik. Surat va mahrajini x^4 -ga bo'lib limitga o'tamiz:

$$\lim_{x \rightarrow \infty} \frac{x - 2x^2 + 5x^4}{2 + 3x^2 + x^4} = \lim_{x \rightarrow \infty} \frac{\frac{x}{x^4} - \frac{2x^2}{x^4} + \frac{5x^4}{x^4}}{\frac{2}{x^4} + \frac{3x^2}{x^4} + \frac{x^4}{x^4}} = \lim_{x \rightarrow \infty} \frac{\frac{1}{x^3} - \frac{2}{x^2} + 5}{\frac{2}{x^4} + \frac{3}{x^2} + 1} =$$

$$= \frac{\lim_{x \rightarrow \infty} \frac{1}{x^3} - \lim_{x \rightarrow \infty} \frac{2}{x^2} + \lim_{x \rightarrow \infty} 5}{\lim_{x \rightarrow \infty} \frac{2}{x^4} + \lim_{x \rightarrow \infty} \frac{3}{x^2} + \lim_{x \rightarrow \infty} 1} = \frac{0 - 0 + 5}{0 + 0 + 1} = 5.$$

b) $\lim_{x \rightarrow 0} \frac{\sqrt{1+3x^2} - 1}{x^2 + x^3} = \frac{0}{0}$ ko'rinishdagi aniqmaslik. Surat va mahrajini qo'shma ifoda $\sqrt{1+3x^2} + 1$ ga ko'paytiramiz:

$$\lim_{x \rightarrow 0} \frac{\sqrt{1+3x^2} - 1}{x^2 + x^3} = \lim_{x \rightarrow 0} \frac{(\sqrt{1+3x^2} - 1)(\sqrt{1+3x^2} + 1)}{(x^2 + x^3)(\sqrt{1+3x^2} + 1)} =$$

$$\lim_{x \rightarrow 0} \frac{1+3x^2 - 1}{x^2(1+x)(\sqrt{1+3x^2} + 1)} = \lim_{x \rightarrow 0} \frac{3}{(1+x)(\sqrt{1+3x^2} + 1)} = \frac{3}{2} = 1,5.$$

$$\lim_{x \rightarrow 0} \frac{1 - \cos 6x}{1 - \cos 2x} = \lim_{x \rightarrow 0} \frac{2 \sin^2 3x}{2 \sin^2 x} = \lim_{x \rightarrow 0} \frac{\sin^2 3x}{3x^2} \cdot \frac{x^2}{\sin^2 x} \cdot 9 =$$

$$= 9 \lim_{x \rightarrow 0} \left(\frac{\sin 3x}{3x} \right)^2 \cdot \left(\frac{x}{\sin x} \right)^2 = 9.$$

Bu erda biz $\lim_{kx \rightarrow 0} \frac{\sin kx}{kx} = \lim_{x \rightarrow 0} \frac{kx}{\sin kx} = 1$ birinchi ajoyib limitdan foydalandik.

$$\begin{aligned} \lim_{x \rightarrow \infty} (x-5)[\ln(x-3) - \ln x] &= \lim_{x \rightarrow \infty} (x-5) \left[\ln \frac{(x-3)}{x} \right] = \\ g) \quad \lim_{x \rightarrow \infty} \ln \left[\left(1 - \frac{3}{x}\right)^{x-5} \right] &= \ln \lim_{x \rightarrow \infty} \left[\left(1 + \frac{-3}{x}\right)^{\frac{x-5}{-3}} \right]^{\frac{3(x-5)}{-3}} = \\ &= \ln \left[\lim_{x \rightarrow \infty} \left(1 + \frac{-3}{x}\right)^{\frac{3(x-5)}{-3}} \right] = \ln e^{-3} = -3 \ln e = -3 \end{aligned}$$

Bu erda biz $\lim_{x \rightarrow \infty} \left(1 + \frac{1}{x}\right)^x = e$ ikkinchi ajoyib limitdan foydalandik. Bundan tashqari lagorism va ko'rsatkichli funksiyalarning uzlusizligidan limitni oldin lagorism ichiga olib kirildi, so'ngra daraja ko'rsatkichiga olib chiqildi.

7. $y = f(x)$ funksiya berilgan. Bu funksiyaning uzulish nuqtalarini toping (agar mavjud bo'lsa) va turini aniqlang. Chizmasini chizing.

$$\text{Berilishi: } f(x) = \begin{cases} -(x+1) & x \leq -1 \\ (x+2)^2 & -1 < x \leq 0 \\ x & x > 0 \end{cases}$$

$y = -(x+1)$, $y = (x+2)^2$ va $y = x$ funksiyalar R - o'plamda uzlusiz bo'lgani uchun $y = f(x)$ funksiyani $x_1 = -1$ va $x_2 = 0$ nuqtalarda uzlusizlik shartiga tekshiramiz.

Uzlusizlik sharti:

$$\lim_{x \rightarrow x_0^-} f(x) = \lim_{x \rightarrow x_0^+} f(x) = f(x_0).$$

1) $x = -1$ da

$$\lim_{x \rightarrow -1^-} -(x+1) = -(-1 - 0 + 1) = 0.$$

$$\lim_{x \rightarrow -1^+} (x+2)^2 = (-1 + 0 + 2)^2 = (1 + 0)^2 = 1.$$

$$f(-1) = -(-1 + 1) = 0.$$

Bu erda,

$$\lim_{x \rightarrow -1^-} f(x) \neq \lim_{x \rightarrow -1^+} f(x) \text{ va } \lim_{x \rightarrow -1} f(x) \neq \infty,$$

$\lim_{x \rightarrow -1} f(x) \neq \infty$, $f(-1) \neq \infty$ bo'lgani uchun $x = -1$ nuqta 1-tur uzulish nuqtasidir. Funksiyaning sakrashi $\Delta = |0 - 1| = 1$ bo'ladi.

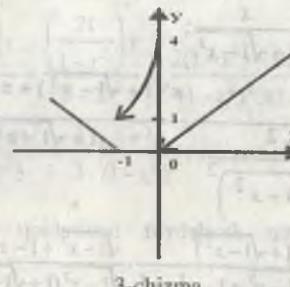

$$1) \quad x = 0 \text{ da } \lim_{x \rightarrow 0} (x+2)^2 = (0 - 0 + 2)^2 = (2 - 0)^2 = 4.$$

$$\lim_{x \rightarrow +0} x = 0.$$

$$f(0) = (0 + 2)^2 = 4$$

$$\text{Bu erda } \lim_{x \rightarrow 0} f(x) \neq \lim_{x \rightarrow +0} f(x) \text{ va } \lim_{x \rightarrow 0} f(x) \neq \infty,$$

$\lim_{x \rightarrow +0} f(x) \neq \infty$, $f(0) \neq \infty$ bo'lgani uchun $x = 0$ nuqta ham 1-tur uzulish nuqtasidir. Funksiyaning sakrashi $\Delta = |0 - 4| = 4$ bo'ladi.

8. Berilgan funksiyalarning xosilasini taping.

a)

$$\begin{aligned}
 y &= \sqrt[3]{\frac{1+x^2}{1-x^2}}; \quad y' = \frac{1}{3} \left(\frac{1+x^2}{1-x^2} \right)^{\frac{1}{3}-1} \cdot \left(\frac{1+x^2}{1-x^2} \right)' = \\
 &= \frac{1}{3} \sqrt[3]{\left(\frac{1-x^2}{1+x^2} \right)^2} \cdot \frac{2x \cdot (1-x^2) + 2x \cdot (1+x^2)}{(1-x^2)^2} = \frac{1}{3} \frac{(1-x^2)^{\frac{2}{3}}}{(1+x^2)^{\frac{2}{3}}} \cdot \frac{4x}{(1-x^2)^{\frac{4}{3}}} = \\
 &= \frac{4}{3} \frac{x}{(1+x^2)^{\frac{2}{3}} (1-x^2)^{\frac{1}{3}}} = \frac{4}{3} \frac{x}{(1+x^2)^{\frac{2}{3}} (1-x^2)^{\frac{4}{3}}} \\
 &= \frac{4x}{3\sqrt[3]{(1+x^2)^2 (1-x^2)^3 \sqrt{1-x^2}}};
 \end{aligned}$$

b) $y = \frac{1}{2} \operatorname{tg}^2 x + \ln \cos x;$

$$\begin{aligned}
 y' &= \frac{1}{2} 2 \operatorname{tg} x \cdot \frac{1}{\cos^2 x} + \frac{1}{\cos x} \cdot (-\sin x) = \operatorname{tg} x \left[\frac{1}{\cos^2 x} - 1 \right] = \operatorname{tg} x \cdot \frac{1-\cos^2 x}{\cos^2 x} = \\
 &= \operatorname{tg} x \cdot \frac{\sin^2 x}{\cos^2 x} = \operatorname{tg} x \cdot \operatorname{tg}^2 x = \operatorname{tg}^3 x.
 \end{aligned}$$

v) $y = \operatorname{arctg} \frac{x}{1+\sqrt{1-x^2}};$

$$\begin{aligned}
 y' &= \frac{1}{1+\frac{x^2}{\left(1+\sqrt{1-x^2}\right)^2}} \cdot \frac{x \cdot (1+\sqrt{1-x^2}) + x \cdot \frac{2x}{2\sqrt{1-x^2}}}{(1+\sqrt{1-x^2})^2} = \\
 &= \frac{\left(1+\sqrt{1-x^2}\right)^2}{1+2\sqrt{1-x^2}+1-x^2+x^2} \cdot \frac{\sqrt{1-x^2}+1-x^2+x^2}{\sqrt{1-x^2}(1+\sqrt{1-x^2})^2} = \\
 &= \frac{1+\sqrt{1-x^2}}{2\left(1+\sqrt{1-x^2}\right)} = \frac{1}{2};
 \end{aligned}$$

$$\begin{aligned}
 q) \quad y &= (x+x^2)^X; \quad (u^V)' = vu^{V-1}u'+u^Vv'\ln u; \\
 y' &= ((x+x^2)^X)' = x(x+x^2)^{X-1}(1+2x)+(x+x^2)^X \ln(x+x^2) = \\
 &= (x+2x^2)(x+x^2)^{X-1}+(x+x^2)^X \ln(x+x^2).
 \end{aligned}$$

9. Berilgan funksiyalar uchun $\frac{dy}{dx}$ va $\frac{d^2y}{dx^2}$ lar topilsin:

a)

$$y = e^x \cos x;$$

$$\frac{dy}{dx} = (e^x \cos x)' = e^x \cos x - e^x \sin x = e^x (\cos x - \sin x).$$

$$\frac{d^2y}{dx^2} = \left(\frac{dy}{dx} \right)' = [e^x (\cos x - \sin x)]' =$$

$$= e^x (\cos x - \sin x) + e^x (-\sin x - \cos x) = \\ = e^x [\cos x - \sin x - \sin x - \cos x] = -2e^x \sin x.$$

b)

$$\begin{cases} x = 3t - t^3 \Rightarrow x'_t = 3 - 3t^2 \Rightarrow \frac{dy}{dx} = \frac{y'_t}{x'_t} = \frac{6t}{3 - 3t^2} = \frac{2t}{1 - t^2}; \\ y = 3t^2 \Rightarrow y'_t = 6t \end{cases}$$

$$\begin{aligned}
 \frac{d^2y}{dx^2} &= \frac{\left(\frac{dy}{dx} \right)'_t}{x'_t} = \frac{\left(\frac{2t}{1-t^2} \right)_t}{3-3t^2} = \frac{2(1-t^2)-2t(-2t)}{(1-t^2)^2 3(1-t^2)} = \\
 &= \frac{2-2t^2+4t^2}{(1-t^2)^3 3} = \frac{2}{3} \cdot \frac{1+t^2}{(1-t^2)^3};
 \end{aligned}$$

10. Lopital qoidasidan foydalananib quyidagi limitlarni hisoblang:

a)

$$\lim_{x \rightarrow 0} \frac{e^{\alpha \cdot x} - e^{\beta \cdot x}}{\sin(\alpha \cdot x) - \sin(\beta \cdot x)} = \frac{0}{0} = \lim_{x \rightarrow 0} \frac{\left(e^{\alpha \cdot x} - e^{\beta \cdot x} \right)'}{\left(\sin(\alpha \cdot x) - \sin(\beta \cdot x) \right)'} =$$

$$= \lim_{x \rightarrow 0} \frac{\alpha \cdot e^{\alpha \cdot x} - \beta \cdot e^{\beta \cdot x}}{\alpha \cdot \cos(\alpha \cdot x) - \beta \cdot \cos(\beta \cdot x)} = \frac{\alpha \cdot e^0 - \beta \cdot e^0}{\alpha \cdot 1 - \beta \cdot 1} = 1.$$

b)

$$\lim_{x \rightarrow 1} \frac{1}{\sqrt[3]{x-1}} = 1^\infty = \lim_{x \rightarrow 1} \frac{1}{\sqrt[3]{x-1}} \cdot \ln\left(\frac{2x-1}{x}\right) = \lim_{x \rightarrow 1} \frac{\ln\left(\frac{2x-1}{x}\right)}{\sqrt[3]{x-1}} =$$

$$\lim_{x \rightarrow 1} \frac{\left[\ln\left(\frac{2x-1}{x}\right)\right]'}{\left[\sqrt[3]{x-1}\right]'} = \lim_{x \rightarrow 1} \frac{x-2x+1}{\frac{1}{3}x^{-\frac{2}{3}}} = \lim_{x \rightarrow 1} \frac{\frac{2}{3}x^{-\frac{2}{3}}}{-\frac{1}{3}x^{-\frac{3}{2}}} = -e^3 \lim_{x \rightarrow 1} \frac{x^{\frac{2}{3}}}{(2x-1)x} = -e^3.$$

11. Berilgan funksiyani $x = x_0$ nuqta atrefida Lagranj ko'rinishli qoldiq hadli Teylor formulasi bo'yicha 4-darajali hadgacha yoying.

$$f(x) = x^4 - x + 1, x_0 = -2.$$

$$f(x) = f(x_0) + \frac{f'(x_0)}{1!}(x - x_0) + \frac{f''(x_0)}{2!}(x - x_0)^2 +$$

$$+ \frac{f'''(x_0)}{3!}(x - x_0)^3 + \frac{f^{(4)}(x_0)}{4!}(x - x_0)^4 + R_4$$

$$f(-2) = 15;$$

$$f'(x) = 4x^3 - 1; \quad f'(-2) = -33;$$

$$f''(x) = 12x^2; \quad f''(-2) = 48;$$

$$f'''(x) = 24x; \quad f'''(-2) = -48;$$

$$f^{(4)}(x) = 24; \quad f^{(4)}(-2) = 24;$$

$$f^{(5)}(x) = 0; \quad f^{(5)}(-2) = 0;$$

Demak,

$$x^4 - x + 1 = 15 - 33(x+2) + 24(x+2)^2 - \frac{48}{6}(x+2)^3 + \frac{24}{4!}(x+2)^4 =$$

$$= 15 - 33(x+2) + 24(x+2)^2 - 8(x+2)^3 + (x+2)^4;$$

12. Berilgan funksiyani xosila yordamida tekshiring va tekshirish natijalariga ko'ra funksiyaning grafigini chizing:

$$f(x) = \frac{x^3}{x^2 - 1}.$$

Bu funksiya $x=\pm 1$ nuqtalardan tashqari barcha x ning qiymatlarida aniqlangan.

$f(-x) = \frac{(-x)^3}{(-x)^2 - 1} = \frac{-x^3}{x^2 - 1} = -\frac{x^3}{x^2 - 1} = -f(x)$ bo'lgani uchun bu funksiya toqdir. Toqligi uchun bu funksiyani $x \geq 0$ qiymatlarda tekshirish etarlidir. $x=0$ da $f(0)=0$; $x=1$ da mavjud emas va qolgan nuqtalarda uzliksiz, shuning uchun $f(x)$ ning ishorasi quyidagicha aniqlanadi:

x	$0 < x < 1$	$1 < x < \infty$
f(x)	-	+

Demak, $(0,1)$ oraliqda $f(x)$ funksiyaning grafigi OX o'qidan pastda, $(1,+\infty)$ oraliqda esa OX o'qidan yuqorida joylashgan. Funksiya grafigi $x=1$ vertikal asimptotaga ega. Og'ma asimptotalarini $y=kx+b$ ko'rinishda izlaymiz:

$$k = \lim_{x \rightarrow \infty} \frac{f(x)}{x} = \lim_{x \rightarrow \infty} \frac{\frac{x^3}{x^2 - 1}}{x} = \lim_{x \rightarrow \infty} \frac{x^2}{x^2 - 1} = 1$$

$$b = \lim_{x \rightarrow \infty} [f(x) - kx] = \lim_{x \rightarrow \infty} (\frac{x^3}{x^2 - 1} - x) = \lim_{x \rightarrow \infty} \frac{x}{x^2 - 1} = 0$$

$y=x$ og'ma asimptotasi.

Ekstremumlarini topamiz:

$$f'(x) = \frac{3x^2(x^2 - 1) - 2x \cdot x^2}{(x^2 - 1)^2} = \frac{x^2(x^2 - 3)}{(x^2 - 1)^2} = 0.$$

Bu tenglamaning musbat yechimlari $x_1 = 0$, $x_2 = \sqrt{3}$.

$f'(x) > 0$ tengsizlikdan $x^2 - 3 > 0$ tengsizlikni olamiz va uning musbat yechimlari $x > \sqrt{3}$ ni hosil qilamiz. Bu oraliqda $f'(x) > 0$ bo'lgani uchun funksiya o'suvchi. $0 < x < \sqrt{3}$ oraliqda $f'(x) < 0$ bo'lgani uchun funksiya bu oraliqda kamayuvchidir.

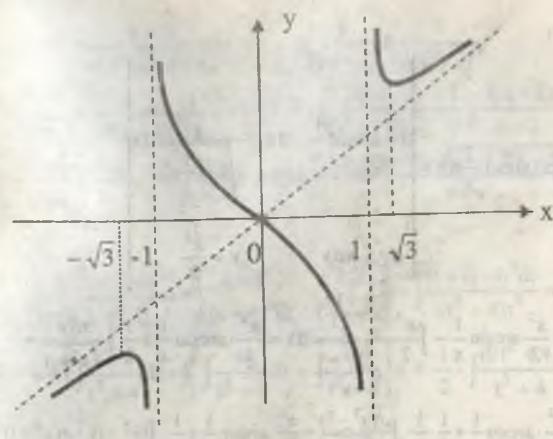

$x = \sqrt{3}$ da funksiya $f(\sqrt{3}) = \frac{3\sqrt{3}}{2}$ minimumga ega.

$x=0$ nuqta, funksiya grafigi koordinata boshiga nisbatan simmetrik bo'lgani uchun, burilish nuqtasi bo'ladi.

Botiqlik va qabariqlikni tekshirish uchun ikkinchi hisobani topamiz:

$$f''(x) = \left(\frac{x^2(x^2 - 3)}{(x^2 - 1)^2} \right)' = \frac{2x(x^2 + 3)}{(x^2 - 1)^3}; \quad \text{Bundan } (1, +\infty)$$

oraliqda

4-chizma

$f''(x) > 0$ bo'lgani uchun bu oraliqda funksiya grafigi botiq bo'ladi. $(0, 1)$ oraliqda $f''(x) < 0$ bo'lgani uchun bu oraliqda funksiya grafigi qabariq bo'ladi.

Bu ma'lumotlarga asosan biz $x \geq 0$ da funksiya grafigini yasay olamiz. $x < 0$ larda esa funksiya grafigi koordinata boshiga nisbatan simmetrikligini nazarda tutib chizamiz (4-chizma).

2-§. IKKINChI YOZMA ISH

1. Quyidagi aniqlmas integralarni hisoblang:

a)

$$\begin{aligned} \int \frac{\sin x dx}{\sqrt{\cos^2 x}} &= \int \frac{-d \cos x}{\sqrt[3]{\cos^2 x}} = - \int (\cos x)^{-\frac{2}{3}} d \cos x = \\ &= -\cos x = z \Rightarrow -\int z^{-\frac{2}{3}} dz = -\frac{z^{\frac{1}{3}}}{-\frac{2}{3} + 1} + C = -\frac{z^{\frac{1}{3}}}{\frac{1}{3}} + C = \\ &= -3\sqrt[3]{z} + C = -3\sqrt[3]{\cos x} + C; \end{aligned}$$

b)

$$\int x \cdot \arcsin \frac{1}{x} dx = \left| \begin{array}{l} u = \arcsin \frac{1}{x} \quad du = \frac{-1}{\sqrt{1 - (\frac{1}{x})^2}} dx \\ dv = x dx \quad v = \frac{x^2}{2} \end{array} \right| =$$

$$= \frac{x^2}{2} \arcsin \frac{1}{x} - \int \frac{x^2}{2} \cdot \frac{-1}{\sqrt{\frac{x^2-1}{x^2}}} dx = \frac{x^2}{2} \cdot \arcsin \frac{1}{x} + \frac{1}{2} \int \frac{x dx}{\sqrt{x^2-1}} =$$

$$= \frac{x^2}{2} \cdot \arcsin \frac{1}{x} + \frac{1}{2} \cdot \frac{1}{2} \cdot \int \frac{d(x^2-1)}{\sqrt{x^2-1}} = \frac{x^2}{2} \cdot \arcsin \frac{1}{x} + \frac{1}{4} \cdot \int (x^2-1)^{-\frac{1}{2}} d(x^2-1) =$$

$$= \frac{x^2}{2} \cdot \arcsin \frac{1}{x} + \frac{1}{4} \cdot \frac{(x^2-1)^{-\frac{1}{2}+1}}{-\frac{1}{2}+1} + C = \frac{x^2}{2} \cdot \arcsin \frac{1}{x} + \frac{1}{2} \cdot \sqrt{x^2-1} + C$$

v)

$$\int \frac{x+3}{x^3+x^2-2x} dx = \int \frac{x+3}{x(x^2+x-2)} dx = \int \frac{x+3}{x(x-1)(x+2)} dx = I$$

$$\frac{x+3}{x(x-1)(x+2)} = \frac{A}{x} + \frac{B}{x-1} + \frac{C}{x+2} = \frac{Ax^2 + Ax - 2A + Bx^2 + 2Bx + Cx^2 - Cx}{x(x-1)(x+2)}$$

$$\begin{cases} A+B+C=0 \\ A+2B-C=1, \quad A=-\frac{2}{3}, \\ -2A=3 \end{cases} \quad \begin{cases} B+C=\frac{3}{2} \\ 2B-C=\frac{5}{2} \end{cases} \Rightarrow 3B=\frac{8}{2} \Rightarrow B=\frac{8}{6};$$

$$C = \frac{3}{2} - \frac{8}{6} = \frac{1}{6};$$

$$I = \int \frac{x+3}{x(x-1)(x+2)} dx = -\frac{2}{3} \int \frac{dx}{x} + \frac{8}{6} \int \frac{dx}{x-1} + \frac{1}{6} \int \frac{dx}{x+2} =$$

$$= -\frac{3}{2} \ln x + \frac{4}{3} \ln(x-1) + \frac{1}{6} \ln(x+2) + C = \ln \left(\frac{(x-1) \cdot \sqrt[3]{x-1} \cdot \sqrt[3]{x+2}}{x \sqrt{x}} \right) + C.$$

g)

$$\int \frac{(\sqrt[4]{x}+1)dx}{(\sqrt{x}+4) \cdot \sqrt[4]{x^3}} = \left| \begin{array}{l} x=t^4 \quad t=\sqrt[4]{x} \\ dx=4t^3 dt \quad t^2=\sqrt{x} \end{array} \right| = \int \frac{(t+1) \cdot 4t^3 dt}{(t^2+4)t^3} =$$

$$= 4 \cdot \int \frac{t+1}{t^2+4} dt = 4 \left[\int \frac{t}{t^2+4} dt + \int \frac{dt}{t^2+4} \right] = 4 \cdot \frac{1}{2} \cdot \int \frac{d(t^2+4)}{t^2+4} +$$

$$+ 4 \cdot \operatorname{arctg} \frac{t}{2} + C = 2 \ln |t^2+4| + 4 \operatorname{arctg} \frac{t}{2} + C = \ln |\sqrt{x}+4|^2 +$$

$$+ 4 \operatorname{arctg} \frac{\sqrt{x}}{2} + C.$$

2. Quyidagi xosmas integralni hisoblang yoki uzoqlashuvchiligini ko'rsating:

$$I = \int_{-1}^2 \frac{dx}{(x+3)^2} = \lim_{\epsilon \rightarrow 0} \int_{-3+\epsilon}^2 \frac{dx}{(x+3)^2} = \lim_{\epsilon \rightarrow 0} \int_{-3+\epsilon}^2 (x+3)^{-2} d(x+3) =$$

$$= \lim_{\epsilon \rightarrow 0} \frac{(x+3)^{-2+1}}{-2+1} \Big|_{-3+\epsilon}^2 = \lim_{\epsilon \rightarrow 0} \left[-\frac{1}{x+3} \Big|_{-3+\epsilon}^2 \right] = -\lim_{\epsilon \rightarrow 0} \left[\frac{1}{5} - \frac{1}{\epsilon} \right] =$$

$$= \lim_{\epsilon \rightarrow 0} \frac{1}{\epsilon} - \frac{1}{5} = \infty$$

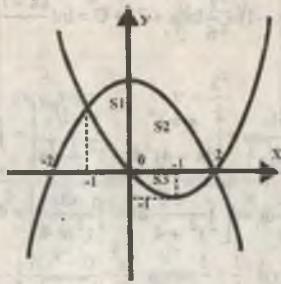

Demak, berilgan integral uzoqlashuvchi.

3. Quyidagi egri chiziqlar bilan chegaralangan tekis shaklning yuzini hisoblang:

$$y = 4 - x^2 \quad \text{va} \quad y = x^2 - 2x; \quad S = S_1 + S_2 + S_3;$$

$$S_1 = \int_{-1}^0 [(4-x^2) - (x^2 - 2x)] dx = \int_{-1}^0 (4 - 2x^2 + 2x) dx =$$

$$= (4x - \frac{2x^3}{3} + x^2) \Big|_{-1}^0 = -(-4 + \frac{2}{3} + 1) = \frac{12 - 2 - 3}{3} = \frac{7}{3} = 2\frac{1}{3}$$

5-chizma

$$S_2 = \int_0^2 (4-x^2) dx = \int_0^2 4dx - \int_0^2 x^2 dx = 4x \Big|_0^2 - \frac{x^3}{3} \Big|_0^2 = 8 - \frac{8}{3} = \frac{16}{3} = 5\frac{1}{3};$$

$$S_3 = - \int_0^2 (x^2 - 2x) dx = - \left(\frac{x^3}{3} - x^2 \right) \Big|_0^2 = - \left(\frac{8}{3} - 4 \right) = \frac{4}{3} = 1\frac{1}{3};$$

$$S = S_1 + S_2 + S_3 = 2\frac{1}{3} + 5\frac{1}{3} + 1\frac{1}{3} = 9;$$

4. $z = f(x, y)$ - ikki o'zgaruvchili funksiya berilgan.

Quyidagi ayniyatni isbotlang:

$$F(x, y, z, \frac{\partial z}{\partial x}, \frac{\partial z}{\partial y}, \frac{\partial^2 z}{\partial x^2}, \frac{\partial^2 z}{\partial y^2}, \frac{\partial^2 z}{\partial x \partial y}) = 0.$$

$$z = \frac{x}{y}; \quad F = x \frac{\partial z}{\partial x} - \frac{\partial z}{\partial y};$$

$$\frac{\partial z}{\partial x} = \frac{1}{y}; \quad \frac{\partial z}{\partial y} = -\frac{x}{y^2}; \quad \frac{\partial^2 z}{\partial x \partial y} = -\frac{1}{y^2};$$

$$F = x \cdot (-\frac{1}{y^2}) - (-\frac{x}{y^2}) = -\frac{x}{y^2} + \frac{x}{y^2} = 0.$$

5. Berilgan: $z = \operatorname{arctg}(x, y^2)$, $A(2;3)$, $\bar{a}(4;-3)$

a) z funksiyaning A nuqtada gradienti topilsin:

$$\text{grad}(z) \Big|_{A(2;3)} = \frac{\partial z}{\partial x} \Big|_{A(2;3)} \vec{i} + \frac{\partial z}{\partial y} \Big|_{A(2;3)} \vec{j};$$

$$\frac{\partial z}{\partial x} \Big|_{A(2;3)} = \frac{y^2}{1+x^2 y^4} = \frac{3^2}{1+2^2 \cdot 3^4} = \frac{9}{325};$$

$$\frac{\partial z}{\partial y} \Big|_{A(2;3)} = \frac{2xy}{1+x^2 y^4} = \frac{2^2 \cdot 3}{1+2^2 \cdot 3^4} = \frac{12}{325};$$

$$\text{grad}(z) \Big|_{A(2;3)} = \frac{9}{325} \vec{i} + \frac{12}{325} \vec{j};$$

b) z - funksiyaning A nuqtada, \bar{a} yo'nalish bo'ylab hosilasini quyidagi formuladan topamiz:

$$\frac{dz}{d\bar{a}} \Big|_A = \frac{dz}{dx} \Big|_A \cos \alpha + \frac{dz}{dy} \Big|_A \cos \beta \text{ bu erda } \cos \alpha = \frac{\bar{a}_x}{|\bar{a}|} = \frac{4}{5};$$

$$\cos \beta = \frac{\bar{a}_y}{|\bar{a}|} = -\frac{3}{5}; \quad \frac{dz}{d\bar{a}} \Big|_A = \frac{9}{325} \cdot \frac{4}{5} + \frac{12}{325} \cdot \left(-\frac{3}{5}\right) = 0$$

6. Berilgan differensial tenglamalarning umumiy yechimini toping:

a)

$$y' \cos x = (y+1) \sin x; \Rightarrow \frac{dy}{dx} \cos x = (y+1) \sin x; \Rightarrow$$

$$\Rightarrow \frac{dy}{y+1} = \frac{\sin x}{\cos x} dx \Rightarrow \int \frac{dy}{y+1} = \int \operatorname{tg} x dx; \Rightarrow$$

$$\Rightarrow \ln(y+1) = -\frac{1}{\cos^2 x} + \ln C; \Rightarrow y+1 = e^{-\frac{1}{\cos^2 x}} + C \Rightarrow$$

$$\Rightarrow y = e^{-\frac{1}{\cos^2 x}} + C_1;$$

b)

$$(1+y)y'' - 5(y')^2 = 0;$$

Belgilash kiritamiz: $y' = p(y); \Rightarrow y'' = p' \cdot y' = p' \cdot p$
Tenglamaga qo'yamiz:

$$(1+y)p' \cdot p - 5p^2 = 0; \Rightarrow \frac{dp}{dy} \cdot (1+y) \cdot p = 5p^2; \Rightarrow \frac{p dp}{5p^2} =$$

$$= \frac{dy}{y+1}; \Rightarrow \int \frac{dp}{5p} = \int \frac{dy}{y+1}; \Rightarrow \frac{1}{5} \ln p = \ln C_1(y+1); \Rightarrow$$

$$\Rightarrow \sqrt[5]{p} = C_1(y+1); \Rightarrow p = C_1(y+1)^5; \Rightarrow y' = C_1(y+1)^5; \Rightarrow$$

$$\Rightarrow \frac{dy}{(y+1)^5} = C_1 dx; \Rightarrow \frac{(y+1)^{-4}}{-4} = C_1 x + C_2; \Rightarrow \frac{1}{(y+1)^4} =$$

$$= C_1 x + C_2; \Rightarrow (y+1)^4 = \frac{1}{C_1 x + C_2};$$

7. Berilgan tenglamaning to'la differensialli ekanligini ko'rsating va uning umumiy yechimini toping.

$$(3x^2 y + 2y + 3)dx + (x^3 + 2x + 3y^2)dy = 0;$$

Berilgan tenglamaning chap tomoni $du = \frac{\partial u}{\partial x} dx + \frac{\partial u}{\partial y} dy$
ko'rinishga ega bo'lgani uchun, agar biz

$$\frac{\partial(3x^2 y + 2y + 3)}{\partial y} = \frac{\partial(x^3 + 2x + 3y^2)}{\partial x},$$

ekanligini ko'rsatsak berilgan tenglamaning to'la differensialligini ko'rsatgan bo'lamiz.

$$\frac{\partial(3x^2 y + 2y + 3)}{\partial y} = \frac{\partial(3x^2 y)}{\partial y} + 2 \frac{\partial y}{\partial y} + \frac{\partial 3}{\partial y} = 3x^2 + 2;$$

$$\frac{\partial(x^3 + 2x + 3y^2)}{\partial x} = \frac{\partial(x^3)}{\partial x} + 2 \frac{\partial x}{\partial x} + 3 \frac{\partial y^2}{\partial x} = 3x^2 + 2;$$

Demak, tenglama to'la differensialli va biz uning yechimini $u(x, y) = C$ ko'rinishda izlaymiz:

$$\frac{\partial u}{\partial x} = 3x^2 y + 2y + 3;$$

$$u(x, y) = \int (3x^2 y + 2y + 3) dx + \varphi(y) = x^3 y + 2xy + 3x + \varphi(y);$$

$$\frac{\partial u}{\partial y} = x^3 + 2x + \varphi'(y) = x^3 + 2x + 3y^2;$$

Bundan,

$$\varphi(y) = 3y^2; \Rightarrow \frac{\partial \varphi}{\partial y} = 3y^2 \Rightarrow d\varphi = 3y^2 dy \Rightarrow \varphi(y) = y^3; \Rightarrow$$

$$\Rightarrow u(x, y) = x^3 y + 2xy + 3x + y^3 = C.$$

8. Berilgan differensial tenglamaning umumiy yechimini toping:

$$x^2 y'' + xy' = 1;$$

Quyidagi almashtirishni bajaramiz:

$$y' = p(x) \Rightarrow \quad y'' = p'(x) \Rightarrow$$

$$x^2 p'(x) + xp(x) = 1; \Rightarrow \quad p'(x) = -\frac{1}{x} p(x) + \frac{1}{x};$$

Bu chiziqli tenglamadir. $p = u(x) \cdot v(x)$ almashtirishni bajaramiz.

U holda, $p'(x) = u'v + uv'$ va bularni chiziqli tenglamaga qo'yib quyidagini hosil qilamiz:

$$u'v + uv' = -\frac{1}{x}uv + \frac{1}{x}; \Rightarrow$$

$$(u'v + \frac{1}{x}u \cdot v) + (u'v - \frac{1}{x}) = 0; \Rightarrow \begin{cases} v \cdot (u' + \frac{1}{x}u) = 0 \\ u \cdot v' - \frac{1}{x} = 0 \end{cases}$$

$$u' + \frac{1}{x}u = 0; \Rightarrow \frac{du}{dx} = -\frac{1}{x}u \Rightarrow \frac{du}{u} = -\frac{dx}{x}; \Rightarrow \ln u = -\ln x \Rightarrow$$

$$\Rightarrow u = \frac{1}{x}; \Rightarrow \frac{1}{x}v' - \frac{1}{x} = 0; \Rightarrow v' = 1 \Rightarrow v = x + C_1; \Rightarrow$$

$$\Rightarrow p = u \cdot v = \frac{1}{x}(x + C_1) = 1 + \frac{C_1}{x}; \Rightarrow y' = p(x) = 1 + \frac{C_1}{x} \Rightarrow$$

$$\Rightarrow dy = \left(1 + \frac{C_1}{x}\right)dx \Rightarrow y = x + C_1 \ln x + C_2.$$

9. Berilgan $y'' - 5y' + 6y = (12x - 7)e^{-x}$ tenglamaning $y(0) = 0, y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

$y'' - 5y' + 6y = 0$ mos keluvchi bir jinsli tenglama. Berilgan bir jinsli bo'limgan tenglamaning umumiy yechimini $y = y_0 + \tilde{y}$ ko'rinishda izlaymiz. Bu erda y_0 -mos bir jinsli tenglamaning umumiy yechimi. \tilde{y} esa berilgan bir jinsli bo'limgan tenglamaning biror xususiy yechimi. Bir jinsli

tenglamaning xarakteristik tenglamasi $\lambda^2 - 5\lambda + 6 = 0$; Ildizlari $\lambda_1 = 2, \lambda_2 = 3$; Demak, $y_1 = e^{2x}, y_2 = e^{3x}$; Bundan bir jinsli tenglamaning umumiy yechimi $y_0(x) = C_1 e^{2x} + C_2 e^{3x}$ ni xosil qilamiz. Xususiy yechim \tilde{y} ni quyidagi ko'rinishda izlaymiz: $y = (Ax + B)e^{-x}$,

$$y' = Ae^{-x} + (Ax + B)(-e^{-x}) = Ae^{-x} - (Ax + B)e^{-x};$$

$$y'' = -Ae^{-x} - Ae^{-x} + (Ax + B)e^{-x};$$

Berilgan tenglamaga qo'yamiz:

$$-2Ae^{-x} + (Ax + B)e^{-x} - 5Ae^{-x} + 5(Ax + B)e^{-x} + (Ax + B)e^{-x} \equiv \\ \equiv (12x - 7)e^{-x};$$

Bundan quyidagilar hosil bo'ladi:

$$\begin{cases} -7A + 7B = -7 \\ 7A = 12 \end{cases} \Rightarrow \begin{cases} -7 \cdot \frac{12}{7} + 7B = -7 \\ A = \frac{12}{7} \end{cases} \Rightarrow \begin{cases} A = \frac{12}{7} \\ 7B = -7 + 12 \end{cases} \Rightarrow$$

$$\Rightarrow \begin{cases} A = \frac{12}{7} \\ B = \frac{5}{7} \end{cases} \Rightarrow \quad \tilde{y} = \left(\frac{12}{7}x + \frac{5}{7}\right) \cdot e^{-x}$$

$$y = y_0 + \tilde{y} = C_1 e^{2x} + C_2 e^{3x} + \left(\frac{12}{7}x + \frac{5}{7}\right) e^{-x}; \quad (1)$$

$$y' = 2C_1 e^{2x} + 3C_2 e^{3x} + \frac{12}{7}e^{-x} - \left(\frac{12}{7}x + \frac{5}{7}\right) e^{-x}; \quad (2)$$

$$(1) \Rightarrow 0 = C_1 + C_2 + \frac{5}{7} \Rightarrow C_1 + C_2 = -\frac{5}{7};$$

$$(2) \Rightarrow 0 = 2C_1 + 3C_2 + \frac{12}{7} - \frac{5}{7} \Rightarrow 2C_1 + 3C_2 = -1;$$

$$\begin{cases} C_1 + C_2 = -\frac{5}{7} \\ 2C_1 + 3C_2 = -1 \end{cases} \times 2 \Rightarrow \begin{cases} 2C_1 + 2C_2 = -\frac{10}{7} \\ 2C_1 + 3C_2 = -1 \end{cases} \Rightarrow C_2 = -1 + \frac{10}{7} = \frac{3}{7}$$

$$C_1 + \frac{3}{7} = -\frac{5}{7} \Rightarrow C_1 = -\frac{3}{7} - \frac{5}{7} = -\frac{8}{7}; \Rightarrow$$

$$\Rightarrow y = -\frac{8}{7} \cdot e^{2x} + \frac{3}{7} \cdot e^{3x} + (\frac{12}{7}x + \frac{5}{7}) \cdot e^{-x};$$

10.O'zgarmas koeffitsientli chiziqli tenglamalar sistemasi berilgan. Karakteristik tenglamalar usulida sistemaning umumiy yechimini toping.

$$\begin{cases} \frac{dx}{dt} = 3x - 2y \\ \frac{dy}{dt} = 2x + 8y \end{cases} \Rightarrow \begin{vmatrix} 3-\lambda & -2 \\ 2 & 8-\lambda \end{vmatrix} = 0; \Rightarrow (3-\lambda)(8-\lambda) + 4 = 0. \Rightarrow$$

$$\Rightarrow \lambda^2 - 11\lambda + 28 = 0.$$

$$\lambda_1 = \frac{11 \pm \sqrt{121 - 4 \cdot 28}}{2} = \frac{11 \pm 3}{2}; \quad \lambda_1 = \frac{11}{2} + \frac{3}{2} = 7, \quad \lambda_2 = \frac{11}{2} - \frac{3}{2} = 4;$$

$$\begin{cases} (3-\lambda)z_1^{\lambda} - 2z_2^{\lambda} = 0 \\ 2z_1^{\lambda} + (8-\lambda)2z_2^{\lambda} = 0 \end{cases}$$

$$\lambda = \lambda_1 = 7.$$

$$\begin{cases} -4\lambda z_1^{\lambda} - 2z_2^{\lambda} = 0 \\ 2z_1^{\lambda} + z_2^{\lambda} = 0 \end{cases} \Rightarrow z_1^{\lambda} = 1 \Rightarrow z_2^{\lambda} = -2.$$

Xos vektori: $z^{\lambda_1} = \begin{pmatrix} z_1^{\lambda_1} \\ z_2^{\lambda_1} \end{pmatrix} = \begin{pmatrix} +1 \\ -2 \end{pmatrix}$

$$\lambda = \lambda_2 = 4$$

$$\begin{cases} -\lambda z_1^{\lambda_2} - 2z_2^{\lambda_2} = 0 \\ 2z_1^{\lambda_2} + z_2^{\lambda_2} = 0 \end{cases} \Rightarrow z_2^{\lambda_2} = 1 \Rightarrow z_1^{\lambda_2} = -2.$$

Xos vektori: $z^{\lambda_2} = \begin{pmatrix} z_1^{\lambda_2} \\ z_2^{\lambda_2} \end{pmatrix} = \begin{pmatrix} 1 \\ -2 \end{pmatrix}$

$$\begin{pmatrix} x(t) \\ y(t) \end{pmatrix}^{\lambda_1} = \begin{pmatrix} 1 \\ -2 \end{pmatrix} e^{7t}; \quad \begin{pmatrix} x(t) \\ y(t) \end{pmatrix}^{\lambda_2} = \begin{pmatrix} -2 \\ 1 \end{pmatrix} e^{4t};$$

$$\begin{pmatrix} x(t) \\ y(t) \end{pmatrix} = C_1 \begin{pmatrix} 1 \\ -2 \end{pmatrix} e^{7t} + C_2 \begin{pmatrix} -2 \\ 1 \end{pmatrix} e^{4t};$$

3-§. UChINChI YOZMA ISh

1. $\sum_{n=1}^{\infty} U_n$ sonli qatorni yaqinlashishga tekshiring.

Berilgan:

$$U_n = \frac{2n}{n^2 + 1}$$

Dalamber usulini qo'llaymiz:

$$U_{n+1} = \frac{2(n+1)}{(n+1)^2 + 1} = \frac{2n+2}{n^2 + 2n + 2},$$

$$\begin{aligned} l &= \lim_{n \rightarrow \infty} \frac{U_{n+1}}{U_n} = \lim_{n \rightarrow \infty} \frac{\frac{2n+2}{n^2 + 2n + 2}}{\frac{2n}{n^2 + 1}} = \lim_{n \rightarrow \infty} \frac{(2n+2)(n^2 + 1)}{2n(n^2 + 2n + 2)} = \\ &= \lim_{n \rightarrow \infty} \frac{(2n^3 + 2n^2 + 2n + 2) \cdot n^3}{(2n^3 + 4n^2 + 4n) \cdot n^3} = \lim_{n \rightarrow \infty} \frac{2 + \frac{2}{n^2} + \frac{2}{n} + \frac{2}{n^3}}{2 + \frac{4}{n} + \frac{4}{n^2}} = \frac{2}{2} = 1. \end{aligned}$$

$l = 1$ bo'lgan holda Dalamber usuli javob bermaydi.
Integral usulini qo'llaymiz:

$$\begin{aligned} \int \frac{2x}{x^2 + 1} dx &= \lim_{A \rightarrow \infty} \left[\int \frac{d(x^2 + 1)}{x^2 + 1} \right]_1^A = \lim_{A \rightarrow \infty} \ln(x^2 + 1) \Big|_1^A = \\ &= \lim_{A \rightarrow \infty} [\ln(A^2 + 1) - \ln 2] = \ln(\infty) - \ln 2 = \infty \end{aligned}$$

Demak, berilgan qator uzoqlashuvchi.

2. Berilgan ishoralarini almashinuvchi sonli qatorni yaqinlashishga tekshiring:

$$\text{Berilgan, } \sum_{n=1}^{\infty} (-1)^n \frac{1}{\sqrt[3]{n^4} + \sqrt[4]{n^3}},$$

Bunda Leybnis belgisini qo'llaymiz:

$$\begin{aligned} U_1 &= \frac{1}{1+1} = \frac{1}{2}; \\ U_2 &= \frac{1}{\sqrt[3]{2^4} + \sqrt[4]{2^3}} = \frac{1}{2\sqrt[3]{2} + \sqrt[4]{2^3}} < \frac{1}{2\sqrt[3]{1^4} + \sqrt[4]{1^3}} = \frac{1}{3} < U_1; \\ U_3 &= \frac{1}{3\sqrt[3]{3} + \sqrt[4]{3^3}} < \frac{1}{2\sqrt[3]{2^4} + \sqrt[4]{2^3}} = U_2 \\ \dots &\dots \\ U_n &= \frac{1}{n\sqrt[3]{n} + \sqrt[4]{n^3}} < \frac{1}{(n-1)\sqrt[3]{n-1} + \sqrt[4]{(n-1)^3}} = U_{n-1}; \end{aligned}$$

Demak,

$$U_1 > U_2 > U_3 > U_4 > \dots > U_n > \dots$$

$$\text{va } \lim_{n \rightarrow \infty} U_n = \lim_{n \rightarrow \infty} \frac{1}{n\sqrt[3]{n} + \sqrt[4]{n^3}} = 0.$$

Demak, berilgan qator yaqinlashuvchi.

3. $\sum_{n=1}^{\infty} a_n x^n$ darajali qatorning yaqinlashish sohasini toping:

Berilgan:

$$a_n = \frac{(n!)^2}{(2n)!};$$

Dalamber belgisini qo'llaymiz:

$$\lim_{n \rightarrow \infty} \left| \frac{\frac{((n+1)!)^2 x^{n+1}}{(2n+2)!}}{\frac{(n!)^2 x^n}{(2n)!}} \right| = \lim_{n \rightarrow \infty} \left| \frac{((n+1)!)^2 x^{n+1} (2n)!}{(2n+2)! (n!)^2 x^n} \right| =$$

$$= \lim_{n \rightarrow \infty} \left| \frac{(n+1)^2 x}{(2n+1)(2n+2)} \right| = \lim_{n \rightarrow \infty} \frac{(n+1)^2}{(2n+1)(2n+2)} |x| =$$

$$= |x| \cdot \lim_{n \rightarrow \infty} \frac{n^2 + 2n + 1}{4n^2 + 6n + 2} = \frac{1}{4} |x| < 1$$

Bu erdan $|x| < 4$ ya'ni $-4 < x < 4$ kelib chiqadi.

Yaqinlashish sohasi: $-4 < x < 4$.

4. Differensial tenglamaning berilgan boshlang'ich shartlarni qanoatlantiruvchi yechimining Teylor qatoriga yoyilmasidagi dastlabki noldan farqli 4 hadini toping.

$$\text{Berilgan: } y' = \sin 2x + \cos y. \quad y\left(\frac{\pi}{2}\right) = \pi$$

$$y'\left(\frac{\pi}{2}\right) = \sin 2 \frac{\pi}{2} + \cos \pi = 0 - 1 = -1$$

$$y'' = 2 \cos 2x - y' \sin y;$$

$$y''\left(\frac{\pi}{2}\right) = 2 \cdot \cos 2 \cdot \frac{\pi}{2} + 1 \cdot \sin \pi = -2;$$

$$y''' = -4 \sin 2x - y'' \sin y - (y')^2 \cos y;$$

$$y'''\left(\frac{\pi}{2}\right) = -4 \sin 2 \cdot \frac{\pi}{2} - y''\left(\frac{\pi}{2}\right) \sin \pi - \left(y'\left(\frac{\pi}{2}\right)\right)^2 \cos \pi = 2 \cdot 0 + 1 = 1;$$

$$y = f(x) = f\left(\frac{\pi}{2}\right) + \frac{f'\left(\frac{\pi}{2}\right)}{1!} \cdot \left(x - \frac{\pi}{2}\right) + \frac{f''\left(\frac{\pi}{2}\right)}{2!} \cdot \left(x - \frac{\pi}{2}\right)^2 + \dots$$

$$y = \pi - \left(x - \frac{\pi}{2}\right) - 2 \frac{1}{2!} \left(x - \frac{\pi}{2}\right)^2 + \frac{3}{3!} \left(x - \frac{\pi}{2}\right)^3 + \dots$$

$$= \pi - \left(x - \frac{\pi}{2}\right) - \left(x - \frac{\pi}{2}\right)^2 + \frac{1}{2} \left(x - \frac{\pi}{2}\right)^3 + \dots$$

5. Berilgan $f(x)$ funksiyaning (a, δ) intervalda Fure qatoriga yoyilmasini toping:

Berilishi:

$$f(x) = e^{-x}; \quad (-\pi; \pi)$$

$$a_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} e^{-x} dx = \frac{1}{\pi} [e^{-x}]_{-\pi}^{\pi} = \frac{1}{\pi} (e^{-\pi} - e^{\pi}) =$$

$$= \frac{1}{\pi} \left(e^{-\frac{1}{\pi}} - e^{\frac{1}{\pi}} \right) = \frac{1}{\pi} \frac{e^{2\pi} - 1}{e^{\pi}};$$

$$a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} e^{-x} \cos nx dx = \left| \begin{array}{ll} u = e^{-x} & dv = \cos nx dx \\ du = -e^{-x} dx & v = \frac{1}{n} \sin nx \end{array} \right| =$$

$$= \frac{1}{n\pi} e^{-x} \cdot \sin nx \Big|_{-\pi}^{\pi} + \frac{1}{n\pi} \int_{-\pi}^{\pi} e^{-x} \sin nx dx =$$

$$= \frac{1}{n\pi} \int_{-\pi}^{\pi} e^{-x} \sin nx dx = \left| \begin{array}{ll} u = e^{-x} & dv = \sin nx dx \\ du = -e^{-x} dx & v = -\frac{1}{n} \cos nx \end{array} \right| =$$

$$= \frac{-1}{\pi n^2} e^{-x} \cos nx \Big|_{-\pi}^{\pi} = \left[\frac{1}{\pi n^2} \int_{-\pi}^{\pi} e^{-x} \cos nx dx \right] =$$

$$= \frac{(-1)^n}{\pi n^2} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) - \frac{1}{n^2} \cdot \frac{1}{\pi} \int_{-\pi}^{\pi} e^{-x} \cos nx dx;$$

Demak, $a_n = \frac{(-1)^n}{\pi n^2} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) - \frac{1}{n^2} a_n$

Bundan: $a_n = \frac{(-1)^n}{\pi(n^2 + 1)} \left(\frac{e^{2\pi} - 1}{e^\pi} \right)$

$$b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} e^{-x} \sin nx dx = \left| \begin{array}{l} u = e^{-x} \quad dv = \sin nx dx \\ du = -e^{-x} dx \quad v = -\frac{1}{n} \cos nx \end{array} \right| =$$

$$= \frac{-1}{\pi n} e^{-x} \cos nx \Big|_{-\pi}^{\pi} - \left[\frac{1}{\pi n} \int_{-\pi}^{\pi} e^{-x} \cos nx dx \right] = \frac{(-1)^n}{\pi n} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) -$$

$$\frac{1}{\pi n} \int_{-\pi}^{\pi} e^{-x} \cos nx dx = \left| \begin{array}{l} u = e^{-x} \quad dv = \cos nx dx \\ du = -e^{-x} dx \quad v = \frac{1}{n} \sin nx \end{array} \right| =$$

$$= \frac{(-1)^n}{\pi n} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) - \frac{1}{\pi n} \left[\frac{1}{\pi n} e^{-x} \sin nx \Big|_{-\pi}^{\pi} + \int_{-\pi}^{\pi} e^{-x} \sin nx dx \right] =$$

$$= \frac{(-1)^n}{\pi n} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) - \frac{1}{\pi n^2} \int_{-\pi}^{\pi} e^{-x} \sin nx dx;$$

Demak, $b_n = \frac{(-1)^n}{\pi n} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) - \frac{1}{n^2} b_n$

Bundan esa

$$b_n = \frac{n \cdot (-1)^n}{(n^2 + 1)\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right);$$

$$f(x) = e^{-x} = \frac{a_0}{2} + \sum_{n=1}^{\infty} (a_n \cos nx + b_n \sin nx) =$$

$$= \frac{1}{\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) + \sum_{n=1}^{\infty} \left[\frac{(-1)^n}{(n^2 + 1)\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) \cdot \cos nx + \frac{n \cdot (-1)^n}{(n^2 + 1)\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) \cdot \sin nx \right] = \frac{1}{\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) +$$

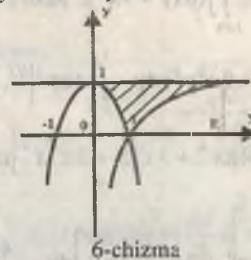

$$\frac{1}{\pi} \left(\frac{e^{2\pi} - 1}{e^\pi} \right) \cdot \sum_{n=1}^{\infty} \left[\frac{(-1)^n}{n^2 + 1} \cdot \cos nx + \frac{n \cdot (-1)^n}{n^2 + 1} \cdot \sin nx \right]$$

6. Berilgan ikki karrali integralda integrallash tartibini o'zgartirish:

Berilishi:

$$\int_0^1 dx \int_{1-x}^1 f(x, y) dy + \int_1^{\ln x} dx \int_{1-x}^1 f(x, y) dy = I$$

$$x = 0, e; \quad y = 1; \quad y = 1 - x^2; \quad y = \ln x;$$

$$y = 1 - x^2 \Rightarrow x^2 = 1 - y \Rightarrow x = \pm \sqrt{1-y}$$

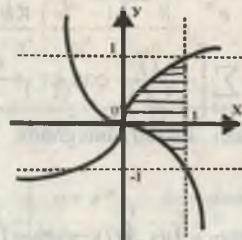

$$y = \ln x \Rightarrow x = e^y$$

$$I = \int_0^1 dy \int_{\sqrt{1-y}}^{\ln y} f(x, y) dx$$

7. Berilgan ikki o'lchamli integralni hisoblang:
Berilishi:

$$\int \int (8xy + 9x^2y^2) dx dy ;$$

$$(D) : x = 1, y = \sqrt[3]{x}, y = -x^3;$$

7-chizma
 $\int \int (8xy + 9x^2y^2) dx dy =$

$$\begin{aligned} &= \int_0^1 dx \int_{-x^3}^{\sqrt[3]{x}} (8xy + 9x^2y^2) dy = \int_0^1 \left[4xy^2 \Big|_{-x^3}^{\sqrt[3]{x}} + 3x^2y^3 \Big|_{-x^3}^{\sqrt[3]{x}} \right] dx = \\ &= \int_0^1 \left[4x^3\sqrt[3]{x^2} - 4xx^6 + 3x^2x + 3x^2x^9 \right] dx = \\ &= \int_0^1 \left[4x^{\frac{11}{3}} - 4x^7 + 3x^3 + 3x^{11} \right] dx = \frac{4x^{\frac{5}{3}+1}}{\frac{5}{3}+1} \Big|_0^1 - 4 \frac{x^8}{8} \Big|_0^1 + \\ &\quad + 3 \frac{x^4}{4} \Big|_0^1 + 3 \frac{x^{12}}{12} \Big|_0^1 = \frac{3}{2} - \frac{1}{2} + \frac{3}{4} + \frac{1}{4} = 2 \end{aligned}$$

8. Tenglamasi Dekart koordinatalarida berilgan egri chiziq bilan chegaralangan yassi figuraning yuzini ikki o'lchamli

integral yordamida qutb koordinatalar sistemasiga o'tib hisoblang ($a>0$).

$$\text{Berilishi: } (x^2 + y^2)^2 = a^2(2x^2 + 3y^2)$$

Bu tenglama – lemniskata deb ataluvchi egri chiziq tenglamasıdır. Qutb kordinatalariga o'tamiz:

$$x = \rho \cos \theta, y = \rho \sin \theta.$$

$$(\rho^2 \cos^2 \theta + \rho^2 \sin^2 \theta)^2 = a^2(2\rho^2 \cos^2 \theta + 3\rho^2 \sin^2 \theta)$$

$$\rho^4 = a^2 \rho^2 (2 \cos^2 \theta + 3 \sin^2 \theta)$$

$$\rho^2 = a^2 (2 + \sin^2 \theta)$$

$$\rho = a \cdot \sqrt{2 + \sin^2 \theta}.$$

Demak, qutb koordinatalar sistemasida figuraning chegaralari quyidagi tenglamalar bilan aniqlanadi:

$$\rho = \Phi_1(\theta) = 0, \quad \rho = \Phi_2(\theta) = a\sqrt{2 + \sin^2 \theta};$$

θ burchakning 0 dan $\frac{\pi}{2}$ gacha o'zgarishi yassi figuraning

$\frac{1}{4}$ yuzasiga mos keladi.

$$\begin{aligned} \frac{1}{4} S &= \int_0^{\frac{\pi}{2}} d\theta \int_{\Phi_1}^{\Phi_2} \rho d\rho = \int_0^{\frac{\pi}{2}} d\theta \int_0^{a\sqrt{2+\sin^2\theta}} \rho d\rho = \\ &\quad \int_0^{\frac{\pi}{2}} \left[\frac{\rho^2}{2} \right]_0^{a\sqrt{2+\sin^2\theta}} d\theta = \int_0^{\frac{\pi}{2}} a^2 (2 + \sin^2 \theta) d\theta = \frac{2a^2}{2} \Big|_0^{\frac{\pi}{2}} + \frac{1}{2} a^2 \int_0^{\frac{\pi}{2}} \frac{1 - \cos 2\theta}{2} d\theta \\ &= \frac{\pi a^2}{4} + \frac{1}{2} a^2 \left[\frac{1}{2} \theta \Big|_0^{\frac{\pi}{2}} - \frac{1}{4} \sin 2\theta \Big|_0^{\frac{\pi}{2}} \right] = \frac{\pi a^2}{4} + \frac{\pi}{8} a^2 = \frac{3\pi a^2}{8} \end{aligned}$$

Bundan esa, $S = \frac{3\pi a^2}{2}$ ekanligi kelib chiqadi.

1. Berilgan sirtlar bilan chegaralangan jismning hajmini
uch o'chamli integral yordamida hisoblang.

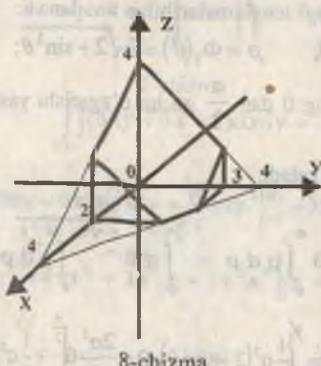

Berilishi:

$$\begin{aligned} z &= 0, \quad z = 4 - x - y, \\ x &= 0, \quad y = 0; \end{aligned}$$

Jismning hajmi quyidagi formula yordamida topiladi:

$$V = \int_a^b dx \int_{y_1(x)}^{y_2(x)} dy \int_{f_1(x,y)}^{f_2(x,y)} dz$$

Berilgan sirtlar bilan chegaralangan jismning ko'rinishi
quyidagichadir:

8-chizma

$$f_1(x, y) = 0, \quad f_2(x, y) = 4 - x - y;$$

$$y_1(x) = 3 \quad x = 0 \quad \text{dan}; \quad x = 1 \quad \text{gacha}$$

$$y_1(x) = 4 - x \quad x = 1 \quad \text{dan}; \quad x = 2 \quad \text{gacha}$$

$$a = 0; \quad b = 2;$$

Demak,

$$\begin{aligned} V &= \int_0^1 dx \int_0^3 dy \int_0^{4-x-y} dz + \int_1^2 dx \int_0^{4-x} dy \int_0^{4-x-y} dz = \int_0^1 dx \int_0^3 [4-x-y] dy \\ &= \int_0^1 dx \int_0^{4-x} [4y - xy - \frac{y^2}{2}] dy = \left[4y^2 - xy^2 - \frac{y^3}{6} \right]_0^{4-x} dx = \\ &= \int_0^1 \left(12 - 3x - \frac{9}{2} \right) dx + \int_1^2 \left(16 - 4x - 4x + x^2 - \frac{16 - 8x + x^2}{2} \right) dx = \\ &= \int_0^1 (7.5 - 3x) dx + \int_1^2 (8 - 4x + \frac{x^2}{2}) dx = (7.5x - 1.5x^2) \Big|_0^1 + \\ &\quad (8x - 2x^2 + \frac{1}{6}x^3) \Big|_1^2 = 9\frac{1}{6}; \end{aligned}$$

2. $L: 2x + y = 2$ to'g'ri chiziqning A(1;0) nuqtasidan
B(0,2) nuqtasigacha bo'lgan kesma bo'ylab berilgan
 $\int(xy - 1)dx + x^2 ydy$ egri chiziqli integralni hisoblang.

$$2x + y = 2 \Rightarrow y = 2 - 2x$$

$$\begin{aligned} \int_L (xy - 1)dx + x^2 ydy &= \int_1^0 (x(2-2x) - 1)dx + \int_1^0 x^2(2-2x)d(2-2x) = \\ &= \int_1^0 (2x - 2x^2 - 1)dx + \int_1^0 (2x^2 - 2x^3)(-2)dx = \int_1^0 [2x - 2x^2 - 1 + (2x^2 - 2x^3)(-2)]dx = \\ &= \int_1^0 [(2x - 2x^2 - 1 - 4x^2 + 4x^3)dx = \int_1^0 (4x^3 - 6x^2 + 2x - 1)dx = (x^4 - 2x^3 + x^2 - x) \Big|_1^0 = \\ &= -1 + 2 - 1 + 1 = 1 \end{aligned}$$

4-§. TO'RTINCHI YOZMA ISh

1. Kompleks ifodaning qiymatini hisoblang:

$$W = (-1-i)^{1+i}$$

$$\begin{aligned} W &= (-1-i)^{1+i} = \\ &= e^{(1+i)\ln(-1-i)} = e^{(1+i)\left[\ln\sqrt{2} + i\cdot\left(-\frac{3\pi}{4} + 2\pi k\right)\right]} = \\ &= e^{(1+i)\left(\frac{1}{2}\ln 2 + i\cdot\left(-\frac{3\pi}{4} + 2\pi k\right)\right)} = \\ &= e^{\frac{1}{2}\ln 2 + i\left(-\frac{3\pi}{4} + 2\pi k\right)} + i^2 \left(-\frac{3\pi}{4} + 2\pi k\right) = \\ &= e^{\frac{1}{2}\ln 2 - \left(-\frac{3\pi}{4} + 2\pi k\right)} + i\cdot\left(-\frac{3\pi}{4} + 2\pi k + \frac{1}{2}\ln 2\right) = \\ &= e^{\frac{1}{2}\ln 2 \frac{3}{4}\pi - 2\pi k} \cdot \left(\cos\left(\frac{\ln 2}{2} - \frac{3\pi}{4}\right) + i\cdot\sin\left(\frac{\ln 2}{2} - \frac{3\pi}{4}\right)\right); \end{aligned}$$

2. Berilgan kompleks o'zgaruvchili $W = f(z), z = x+iy$ funksiyani $W = U(x, y) + iV(x, y)$ ko'rinishda yozing va uning analitikligini tekshiring. Agar $W = f(z)$ funksiya analitik bo'ssa uning berilgan z_0 nuqtada hosilasini toping:

$$W = e^{iz^2}, z_0 = \frac{\sqrt{\pi}}{2}i$$

$$\begin{aligned} W &= e^{i\cdot(x+iy)^2} = e^{i\cdot(x^2 + 2ixy - y^2)} = e^{-2xy + (x^2 - y^2)\cdot i} = \\ &= e^{-2xy} e^{(x^2 - y^2)\cdot i} = e^{-2xy} (\cos(x^2 - y^2) + i\sin(x^2 - y^2)). \end{aligned}$$

Koshi-Riman shartini tekshiramiz:

$$\frac{\partial U}{\partial x} = \frac{\partial V}{\partial y}; \quad \frac{\partial U}{\partial y} = -\frac{\partial V}{\partial x};$$

$$\begin{aligned} \frac{\partial U}{\partial x} &= \frac{\partial}{\partial x} (e^{-2xy} \cos(x^2 - y^2)) = -2e^{-2xy} \cos(x^2 - y^2) + \\ &+ e^{-2xy} (-\sin(x^2 - y^2) \cdot 2x) = -2e^{-2xy} (y \cos(x^2 - y^2) + x \sin(x^2 - y^2)); \end{aligned}$$

$$\begin{aligned} \frac{\partial V}{\partial y} &= \frac{\partial}{\partial y} (e^{-2xy} \sin(x^2 - y^2)) = -2e^{-2xy} \sin(x^2 - y^2) + \\ &+ e^{-2xy} \cos(x^2 - y^2) \cdot (-2y) = -2e^{-2xy} (x \sin(x^2 - y^2) + y \cos(x^2 - y^2)); \end{aligned}$$

$$\text{Demak, } \frac{\partial U}{\partial x} = \frac{\partial V}{\partial y};$$

$$\begin{aligned} \frac{\partial U}{\partial y} &= \frac{\partial}{\partial y} (e^{-2xy} \cos(x^2 - y^2)) = -2xe^{-2xy} \cos(x^2 - y^2) + \\ &+ e^{-2xy} (-\sin(x^2 - y^2) \cdot (-2y)) = 2e^{-2xy} (y \sin(x^2 - y^2) + x \cos(x^2 - y^2)); \end{aligned}$$

Demak,

$$\frac{\partial U}{\partial y} = -\frac{\partial V}{\partial x};$$

Bundan kelib chiqadiki berilgan funksiya analitikdir.

$$\begin{aligned} \frac{\partial W}{\partial z} &= \frac{\partial U}{\partial x} + i \frac{\partial V}{\partial x} = -2e^{-2xy} \left(y \cos(x^2 - y^2) + x \sin(x^2 - y^2) \right) + \\ &+ i \left(2e^{-2xy} \left(\cos(x^2 - y^2) - y \sin(x^2 - y^2) \right) \right) = \\ &- 2ye^{-2xy} \left[\cos(x^2 - y^2) + i \sin(x^2 - y^2) \right] + \\ &+ 2xe^{-2xy} \left[i \cos(x^2 - y^2) - \sin(x^2 - y^2) \right] = \\ &= 2xie^{-2xy} \left[\cos(x^2 - y^2) + i \sin(x^2 - y^2) \right] - \\ &- 2ye^{-2xy} \left[\cos(x^2 - y^2) + i \sin(x^2 - y^2) \right] = 2xie^{iz^2} - 2ye^{iz^2} \\ &= 2e^{iz^2} (xi - y) = 2ie^{iz^2} (x + iy) = 2ize^{iz^2} \\ \frac{\partial W}{\partial z} \Big|_{z_0} &= \frac{\sqrt{\pi}}{2} \cdot i = 2i \frac{\sqrt{\pi}}{2} ie^{-i \cdot \left(\frac{\sqrt{\pi}}{2} \cdot i \right)^2} = -i \cdot \frac{\pi}{4} = \\ &= -\pi \left(\cos \frac{\pi}{4} - i \sin \left(\frac{\pi}{4} \right) \right) = -\pi \left(\frac{\sqrt{2}}{2} - \frac{\sqrt{2}}{2} i \right) = -\frac{\sqrt{2}}{2} \pi + \frac{\sqrt{2}}{2} \pi \cdot i \end{aligned}$$

3. Berilgan $f(z)$ funksiyani z_0 nuqta atrofida Loran qatoriga yoying va uning yaqinlashish sohasini toping:

$$f(z) = \frac{7z - 19}{z^2 - 6z + 5}; \quad z_0 = 1.$$

$$\begin{aligned} f(z) &= \frac{7z - 19}{z^2 - 6z + 5} = \frac{7z - 19}{(z-5)(z-1)} = \frac{A}{z-5} + \frac{B}{z-1} = \\ &= \frac{A(z-1) + B(z-5)}{(z-1)(z-5)}; \Rightarrow A(z-1) + B(z-5) = 7z - 19. \\ z = 1 &\Rightarrow -4B = -12 \Rightarrow B = 3 \\ z = 5 &\Rightarrow 4A = 16 \Rightarrow A = 4 \end{aligned}$$

$$\text{Demak, } f(z) = \frac{4}{z-5} + \frac{3}{z-1};$$

Ma'lumki,

$$\frac{1}{1-z} = \sum_{n=0}^{\infty} z^n, \quad |z| < 1 \text{ da.}$$

Bundan

$$\begin{aligned} \frac{4}{z-5} &= \frac{4}{-4+(z-1)} = \frac{4}{4-(z-1)} = \frac{-4}{4 \left(1 - \frac{z-1}{4} \right)} = \\ &= -\frac{1}{1 - \frac{z-1}{4}} = -\sum_{n=0}^{\infty} \left(\frac{z-1}{4} \right)^n = -\sum_{n=0}^{\infty} \frac{(z-1)^n}{4^n}; \end{aligned}$$

Demak,

$$f(z) = -\sum_{n=0}^{\infty} \frac{(z-1)^n}{4^n} + \frac{3}{z-1}; \quad 0 < |z-1| < 1$$

doirada yaqinlashuvchidir.

4. Berilgan integralni hisoblang:

$$I = \int \frac{e^z}{z^3 - 5z^2} dz;$$

Integrallash sohasining grafigini tuzamiz:

9-chizma

$$\text{Demak, } \int_{|z|=7} \frac{e^z}{z^3 - 5z^2} dz = \int_{\delta_1} \frac{e^z}{z^3 - 5z^2} dz + \int_{\delta_2} \frac{e^z}{z^3 - 5z^2} dz =$$

$$\int_{\delta_1} \frac{\frac{e^z}{z-5} dz}{z^2} + \int_{\delta_2} \frac{\frac{e^z}{z^2} dz}{z-5} = \frac{2\pi i}{1!} \left(\frac{e^z}{z-5} \right) \Big|_{z=0} + 2\pi i \left(\frac{e^z}{z^2} \right) \Big|_{z=5} =$$

$$= 2\pi i \left(\frac{e^z(z-5) - e^z}{|z-5|^2} \right) \Big|_{z=0} + 2\pi i \left(\frac{e^z}{25} \right) = 2\pi i \left(\frac{-6}{25} \right) + 2\pi i \left(\frac{e^5}{25} \right) =$$

$$= 2\pi i \left(\frac{e^5 - 6}{25} \right) = \frac{2\pi i}{25} (e^5 - 6)$$

5. Agar A hodisaning har bir sinovda ro'y berish ehtimoli 0,25 ga teng bo'lsa, bu hodisaning 243 ta sinovda rosa 70 marta ro'y berish ehtimolini toping.

Masala shartiga ko'ra $n=243$, $k=70$, $p=0,25$, $q=0,75$; $n=243$ etarlicha katta son bo'lgani uchun Laplasning ushbu lokal teoremasidan foydalanamiz:

$$P_n(k) = \frac{1}{\sqrt{npg}} \varphi(x),$$

bu erda,

$$x = \frac{k - np}{\sqrt{npg}}$$

x ning qiymatini topamiz:

$$x = \frac{k - np}{\sqrt{npg}} = \frac{70 - 243 \cdot 0,25}{\sqrt{243 \cdot 0,25 \cdot 0,75}} = \frac{9,25}{6,75} = 1,73$$

Jadvaldan (Gmurman, 1-ilova)

$\varphi(1,73) = 0,1561$ ni topamiz.

Izlanayotgan ehtimol

$$P_{243}(70) = \frac{1}{6,75} \cdot 0,1561 = 0,0231$$

6. X diskret tasodifiy miqdor faqat ikkita x_1 va x_2 qiymatga ega bo'lib $x_1 > x_2$. X-ning x_1 qiymatni qabul qilish ehtimoli 0,6 ga teng. Matematik kutilish va dispersiya ma'lum: $M(x)=1,4$, $D(x)=0,24$. X ning taqsimot qonunini toping.

Diskret tasodifiy miqdorning barcha mumkin bo'lgan qiymatlarning ehtimollari yig'indisi birga teng, shuning uchun X ning x_2 qiymatni qabul qilish ehtimoli $1-0,6=0,4$ ga teng.

Demak,

$$X: \quad x_1 \quad x_2$$

(1)

$$P: \quad 0,6 \quad 0,4$$

x_1 va x_2 larni topish uchun bu sonlarni o'zaro bog'laydigan ikkita tenglamani tuzish lozim. Shu maqsada biz ma'lum matematik kutilish va dispersiyani x_1 va x_2 orqali ifodalaymiz.

$M(X)$ ni topamiz.

$$M(X)=0,6 x_1 + 0,4 x_2$$

Shartga ko'ra $M(X)=1,4$ demak, $0,6 x_1 + 0,4 x_2 = 1,4$.

Ikkinci tenglamani hosil qilish uchun bizga ma'lum dispersiyani x_1 va x_2 orqali ifodalaymiz. Buning uchun X^2 ning taqsimat qonunini yozamiz:

$$X^2: \quad x_1^2 \quad x_2^2$$

$$P: \quad 0,6 \quad 0,4$$

$$M(x^2) = 0,6x_1^2 + 0,4x_2^2;$$

$$Dx = M(x^2) - (M(x))^2 = 0,6x_1^2 + 0,4x_2^2 - (1,4)^2;$$

$$D(x) = 0,24 \text{ bo'lgani uchun: } 0,6x_1^2 + 0,4x_2^2 = 2,2;$$

$$\begin{cases} 0,6x_1^2 + 0,4x_2^2 = 1,4; \\ 0,6x_1^2 + 0,4x_2^2 = 2,2; \end{cases} \Rightarrow \begin{cases} x_1 = 1 \\ x_2 = 2 \end{cases} \cup \begin{cases} x_1 = 1,8 \\ x_2 = 0,8 \end{cases}$$

Shartga ko'ra $x_1 > x_2$, shuning uchun masalani faqat birinchi yechim

$$x_1 = 1, \quad x_2 = 2 \quad (2)$$

qanoatlantiradi. (2) ni (1) ga qo'yib, izlanayotgan taqsimot qonunini hosil qilamiz:

X	1	2
P	0,6	0,4

7. ξ - tasodifiy miqdorning zinchlik funksiyasi berilgan.

$$P_\xi(x) = \begin{cases} h, & -2 \leq x \leq 3 \text{ da} \\ 0, & x < -2, x > 3 \text{ da} \end{cases}$$

h, $M\xi$, $D\xi$, $P(1 < \xi < 5)$ sa $F_\xi(x)$ larni toping:

$$1) \int P_\xi(x)dx = \int_{-2}^5 P_\xi(x)dx = \int_{-2}^3 P_\xi(x)dx + \int_3^5 P_\xi(x)dx = 5h = 1 \Rightarrow h = 0,2.$$

$$2) M_\xi = \int xP_\xi(x)dx = \int_{-2}^5 xP_\xi(x)dx = 0,2 \int_{-2}^5 xdx = 0,1x^2 \Big|_{-2}^5 = 0,5$$

$$3) D_\xi = \int_{-\infty}^{\infty} (x - 0,5)^2 \cdot P_\xi(x)dx = \int_{-2}^3 (x - 0,5)^2 \cdot 0,2dx \approx 2,1$$

$$4) P(1 < \xi < 5) = \int_1^5 P_\xi(x)dx = \int_1^3 P_\xi(x)dx + \int_3^5 P_\xi(x)dx = \int_1^3 0,2dx = 0,4.$$

5) Agar $x < -2$ bo'lsa,

$$F_\xi(x) = \int_{-\infty}^x P_\xi(x)dx = 0$$

Agar $x > 3$ bo'lsa,

$$F_\xi(x) = \int_{-\infty}^x P_\xi(x)dx = \int_{-\infty}^{-2} P_\xi(x)dx + \int_{-2}^3 P_\xi(x)dx + \int_3^x P_\xi(x)dx = \int_{-2}^3 0,2dx = 1$$

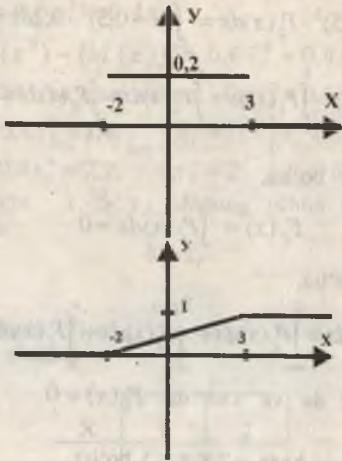

chunki $x < -2$ da va $x > 3$ da $P_\xi(x) = 0$.

Agar $-2 \leq x \leq 3$ bo'lsa,

$$F_\xi(x) = \int_{-\infty}^x P_\xi(x)dx = \int_{-\infty}^{-2} P_\xi(x)dx + \int_{-2}^x P_\xi(x)dx = \int_{-2}^x 0,2dx = 0,2 \cdot (x + 2)$$

Shunday qilib,

$$F_\xi(x) = \begin{cases} 0, & x < -2 \\ 0,2(x + 2), & -2 \leq x \leq 3 \\ 1, & x \geq 3 \end{cases}$$

10-chizma

8. Normal taqsimlangan X - tasodifiy miqdorning matematik kutilishi va dispersiyasi mos ravishda 10 va 2 ga teng. Tajriba natijasida X - ning (12:14) intervalda yotadigan qiymat qabul qilish ehtimolini toping.

X -ning (α, β) intervalga tegishli qiymat qabul qilish ehtimoli

$$P(\alpha < x < \beta) = \Phi\left(\frac{\beta - \alpha}{\tau}\right) - \Phi\left(\frac{\alpha - \alpha}{\tau}\right); \text{ bu erda,}$$

$$\Phi(x) = \frac{1}{\sqrt{2\pi}} \int_0^x e^{-t^2/2} dt - \text{Laplas funksiyasıdır.}$$

Bunga $\alpha = 12; \beta = 14; \alpha = 10; \tau = 2$ -larni qo'yib

$$\frac{\beta - \alpha}{\tau} = \frac{14 - 10}{2} = 2; \frac{\alpha - \alpha}{\tau} = \frac{12 - 10}{2} = 1$$

va $P(\alpha < x < \beta) = \Phi(2) - \Phi(1)$; -larni hosil qilamiz.

Jadvaldan foydalaniib:

$$\Phi(2) = 0,4772, \Phi(1) = 0,3413 \text{ ni topamiz.}$$

Izlanayotgan ehtimol:

$$P(\alpha < x < \beta) = 0,1359 \text{ ga teng.}$$

9. Bosh to'planning normal taqsimlangan X - belgisining nomalum a- matematik kutilishini 0,95 ishonchlik bilan baholash uchun ishonchlik intervalini toping. Bosh o'rtacha kvadratik chetlanish $\sigma = 5$, tanlanma o'rtacha qiymat $\bar{x} = 14$ va tanlanma hajmi $n = 25$ berilgan.

Ushbu ishonchlik intervalini topish talab etilmoqda:

$$\bar{x} - t \frac{\tau}{\sqrt{n}} < a < \bar{x} + t \frac{\tau}{\sqrt{n}} \quad (1)$$

Bu erda, t-dan boshqa barcha kattaliklar ma'lum, t ni tolamiz:

$2\Phi(t) = 0,95$ munosabatdan $\Phi(t) = 0,475$ ni hosil qilamiz, Jadvaldan $t = 1,96$ ni topamiz, $t = 1,96, \tau = 5, \bar{x} = 14, n = 25$ -larni (1) ga qo'yib uzil-kesil ushbu izlanayotgan ishonchlik intervalini hosil qilamiz: $12,04 < a < 15,96$.

III BOB. YOZMA ISh TOPShIRIQLARI

1-§. BIRINChI YOZMA ISh TOPShIRIQLARI

Vektorlar algebrasi va analitik geometriya

1.(1-20) Biror bazisda $\vec{a}(a_1, a_2, a_3)$, $\vec{b}(b_1, b_2, b_3)$, $\vec{c}(c_1, c_2, c_3)$ va $\vec{d}(d_1, d_2, d_3)$ vektorlar berilgan. $\vec{a}, \vec{b}, \vec{c}$ vektorlar bazis tashkil etishini ko'satsing va bu bazisda \vec{d} vektoring koordinatalarini toping:

1. $\vec{a}(1,2,3)$, $\vec{b}(-1,3,2)$, $\vec{c}(7,-3,5)$, $\vec{d}(6,10,17)$
2. $\vec{a}(4,2,5)$, $\vec{b}(0,7,2)$, $\vec{c}(0,2,7)$, $\vec{d}(1,5,1)$
3. $\vec{a}(4,7,8)$, $\vec{b}(9,1,3)$, $\vec{c}(2,-4,1)$, $\vec{d}(1,-13,-13)$
4. $\vec{a}(2,2,3)$, $\vec{b}(4,6,10)$, $\vec{d}(7,4,11)$, $\vec{d}(3,-2,1)$
5. $\vec{a}(10,3,1)$, $\vec{b}(1,4,2)$, $\vec{c}(3,9,2)$, $\vec{d}(19,30,7)$
6. $\vec{a}(2,4,1)$, $\vec{b}(1,3,6)$, $\vec{c}(5,3,1)$, $\vec{d}(24,20,6)$
7. $\vec{a}(1,-2,3)$, $\vec{b}(4,7,2)$, $\vec{c}(6,4,2)$, $\vec{d}(14,18,6)$
8. $\vec{a}(1,4,3)$, $\vec{b}(6,8,5)$, $\vec{c}(3,1,4)$, $\vec{d}(21,18,23)$
9. $\vec{a}(2,7,3)$, $\vec{b}(3,1,8)$, $\vec{c}(2,-7,4)$, $\vec{d}(16,14,27)$
10. $\vec{a}(7,2,1)$, $\vec{b}(4,3,5)$, $\vec{c}(3,4,-2)$, $\vec{d}(2,-5,-13)$
11. $\vec{a}(1,7,3)$, $\vec{b}(3,4,2)$, $\vec{c}(4,8,5)$, $\vec{d}(7,32,14)$
12. $\vec{a}(-1,0,2)$, $\vec{b}(1,1,1)$, $\vec{c}(4,3,-1)$, $\vec{d}(1,3,3)$
13. $\vec{a}(1,3,2)$, $\vec{b}(-1,0,1)$, $\vec{c}(2,-1,1)$, $\vec{d}(2,1,-2)$
14. $\vec{a}(9,1,3)$, $\vec{b}(2,-4,1)$, $\vec{c}(4,7,8)$, $\vec{d}(1,-3,-3)$
15. $\vec{a}(2,4,1)$, $\vec{b}(5,3,1)$, $\vec{c}(1,3,6)$, $\vec{d}(4,10,6)$
16. $\vec{a}(6,8,5)$, $\vec{b}(1,4,3)$, $\vec{c}(3,1,4)$, $\vec{d}(1,1,2)$
17. $\vec{a}(2,3,2)$, $\vec{b}(7,1,-7)$, $\vec{c}(3,8,4)$, $\vec{d}(8,7,9)$

18. $\vec{a}(-1,1,2)$, $\vec{b}(0,1,3)$, $\vec{c}(2,1,-1)$, $\vec{d}(3,3,1)$
19. $\vec{a}(1,-1,2)$, $\vec{b}(3,0,-1)$, $\vec{c}(2,1,1)$, $\vec{d}(-2,1,2)$
20. $\vec{a}(2,5,1)$, $\vec{b}(4,3,3)$, $\vec{c}(1,1,6)$, $\vec{d}(2,5,3)$.
2. (21-40) A_1, A_2, A_3, A_4 piramida uchilarining koordinatalari berilgan. Toping:
 A_1A_2 qirrasining uzunligini,
 A_1A_2 va A_1A_4 qirralari orasidagi burchakni,
 A_1A_4 qirrasi bilan A_1, A_2, A_3 yoq orasidagi burchakni,
 A_1, A_2, A_3 yoq yuzasini, piramida hajimini,
 A_1A_2 qirrasi yotgan to'g'ri chiziq tenglamasini,
 $A_1A_2A_3$ tekisligining tenglamasini,
 A_4 uchidan $A_1A_2A_3$ yoqqa tushirilgan balandlik tenglamasini.
21. $A_1(4;2;5)$, $A_2(0;7;2)$, $A_3(0;2;1;7)$, $A_4(1;5;0)$
22. $A_1(4;4;10)$, $A_2(4;10;2)$, $A_3(2;8;4)$, $A_4(9;6;4)$
23. $A_1(4;6;5)$, $A_2(6;9;4)$, $A_3(2;10;10)$, $A_4(7;5;9)$
24. $A_1(3;5;4)$, $A_2(8;7;4)$, $A_3(5;10;4)$, $A_4(4;7;8)$
25. $A_1(10;6;6)$, $A_2(-2;8;2)$, $A_3(6;8;9)$, $A_4(7;10;3)$
26. $A_1(1;8;2)$, $A_2(5;2;6)$, $A_3(5;7;4)$, $A_4(4;10;9)$
27. $A_1(6;6;5)$, $A_2(4;9;5)$, $A_3(4;6;11)$, $A_4(6;9;3)$
28. $A_1(7;2;2)$, $A_2(5;7;7)$, $A_3(5;3;1)$, $A_4(2;3;7)$
29. $A_1(8;6;4)$, $A_2(10;5;5)$, $A_3(5;6;8)$, $A_4(8;10;7)$
30. $A_1(7;7;3)$, $A_2(6;5;8)$, $A_3(3;5;8)$, $A_4(8;4;1)$
31. $A_1(2;3;0)$, $A_2(2;0;-5)$, $A_3(0;3;-5)$, $A_4(2;3;-5)$
32. $A_1(3;3;1)$, $A_2(7;2;7)$, $A_3(5;3;1)$, $A_4(1;1;8)$
33. $A_1(4;9;5)$, $A_2(4;6;11)$, $A_3(6;6;5)$, $A_4(6;9;3)$
34. $A_1(2;2;7)$, $A_2(7;7;5)$, $A_3(3;1;5)$, $A_4(3;7;2)$
35. $A_1(4;6;8)$, $A_2(5;5;10)$, $A_3(8;6;5)$, $A_4(7;10;8)$
36. $A_1(2;-3;2)$, $A_2(7;1;0)$, $A_3(1;2;3)$, $A_4(3;2;7)$

37. $A_1(1;2;3)$, $A_2(4;2;5)$, $A_3(4;7;8)$, $A_4(2;2;3)$

38. $A_1(-1;3;2)$, $A_2(0;7;2)$, $A_3(9;1;3)$, $A_4(4;6;10)$

39. $A_1(1;-2;3)$, $A_2(1;4;3)$, $A_3(2;7;3)$, $A_4(7;2;1)$

40. $A_1(1;3;2)$, $A_2(9;1;3)$, $A_3(2;4;1)$, $A_4(6;8;5)$

3. (41-60) Uch normallumli uchta chiziqli tenglamalar sisternasi berilgan. Bu tenglamalar sisternasining birgalikdaligini tekshiring va uni quyidagi usullar bilan yeching:

1) Kramer usuli 2) Gauss usuli

$$\begin{cases} 3x_1 + 2x_2 + x_3 = 5 \\ 2x_1 + 3x_2 + x_3 = 1 \\ 2x_1 + x_2 + 3x_3 = 11 \end{cases}$$

$$\begin{cases} x_1 - 2x_2 + 3x_3 = 6 \\ 2x_1 - 3x_2 - 4x_3 = 20 \\ 3x_1 - 2x_2 - 5x_3 = 6 \end{cases}$$

$$\begin{cases} 4x_1 - 3x_2 + 2x_3 = 9 \\ 2x_1 + 5x_2 - 3x_3 = 4 \\ 5x_1 + 6x_2 - 2x_3 = 18 \end{cases}$$

$$\begin{cases} x_1 + x_2 + 2x_3 = -1 \\ 2x_1 - x_2 + 2x_3 = -4 \\ 4x_1 + x_2 + 4x_3 = -2 \end{cases}$$

$$\begin{cases} 2x_1 - x_2 - x_3 = 4 \\ 3x_1 + 4x_2 - 2x_3 = 11 \\ 3x_1 - 2x_2 + 4x_3 = 11 \end{cases}$$

2. (661-680) Berilgan kompleks o'zgaruvchili $W=f(Z)$, ($Z=X+Yi$) funksiyani $W=U(X,Y)+iV(X,Y)$ ko'rinishda yozing va uning analitikligini tekshiring. Agar $W=f(Z)$ funksiya analitik bo'lsa, uning berilgan Z nuqtada hosilasini toping.

$$661. W = (iZ)^3; \quad Z_0 = -1+i.$$

$$662. W = i(1-Z^2) - 2Z; \quad Z_0 = 1.$$

$$663. W = e^{-\frac{z^2}{1-2z}}; \quad Z_0 = i.$$

$$664. W = e^{\frac{-1-2z}{z}}; \quad Z_0 = \frac{\pi \cdot i}{3}.$$

$$665. W = Z^3 + 3Z - i; \quad Z_0 = -i.$$

$$666. W = e^{\frac{1-2zi}{z}}; \quad Z_0 = \frac{\pi}{6}.$$

$$667. W = 2Z^2 - iZ; \quad Z_0 = 1-i.$$

$$668. W = e^{\frac{i \cdot z^2}{z}}; \quad Z_0 = \frac{\sqrt{\pi} \cdot i}{2}.$$

$$669. W = Z^3 + Z^2 + i; \quad Z_0 = \frac{2 \cdot i}{3}.$$

$$670. W = Z \cdot e^{\frac{z}{z}}; \quad Z_0 = -1+i\pi.$$

$$671. W = \frac{1}{z}; \quad Z_0 = 1+i.$$

$$672. W = Z^3 + Z - i; \quad Z_0 = 1+i.$$

$$673. W = Z^3 - Z; \quad Z_0 = 1-i.$$

$$674. W = Z^3; \quad Z_0 = 1+2i.$$

$$675. W = e^z; \quad Z_0 = \frac{\pi \cdot i}{2}.$$

$$676. W = \frac{1}{z}; \quad Z_0 = 3-2i.$$

$$677. W = Z^3; \quad Z_0 = 1-i.$$

$$678. W = Z^2 + Z - 1; \quad Z_0 = 1.$$

$$679. W = Z^2 + 1; \quad Z_0 = 2-i.$$

$$680. W = Z^2 + i; \quad Z_0 = i.$$

3. (681-700) Berilgan $f(z)$ funksiyani Z_0 nuqta atrofida Loran qatoriga yoying va uning yaqinlashish sohasini toping:

$$681. f(z) = \frac{1}{3z-5}; \quad Z_0 = \frac{5}{3}. \quad 691. f(z) = e^{\frac{z}{z-3}}; \quad Z_0 = 3.$$

$$682. f(z) = \sin \frac{z}{1-z}; \quad Z_0 = 1. \quad 692. f(z) = \frac{1}{(z-1)(z+2)}; \quad Z_0 = 1.$$

$$683. f(z) = e^{\frac{z}{1-z}}; \quad Z_0 = 0. \quad 693. f(z) = \frac{1}{2z+3}; \quad Z_0 = 1.$$

$$684. f(z) = e^{\frac{1}{1-z}}; \quad Z_0 = 1. \quad 694. f(z) = \cos \frac{1}{z-i}; \quad Z_0 = i.$$

$$685. f(z) = \frac{1}{(z^2 + 1)^2}; \quad Z_0 = i. \quad 695. f(z) = \frac{z}{z^2 + 1}; \quad Z_0 = \infty.$$

$$686. f(z) = \ln \frac{z-1}{z-2}; \quad Z_0 = 1. \quad 696. f(z) = \frac{z}{4+z^2}; \quad Z_0 = 2i.$$

$$687. f(z) = \cos \frac{z}{z-1}; \quad Z_0 = 1. \quad 697. f(z) = \frac{z^2}{z+1}; \quad Z_0 = -1.$$

$$688. f(z) = \frac{1}{z(z-1)}; \quad Z_0 = 0. \quad 698. f(z) = \ln \frac{z}{z-1}; \quad Z_0 = 0.$$

$$689. f(z) = -\frac{z}{1+z^2}; \quad Z_0 = i. \quad 699. f(z) = e^{\frac{z+1}{z}}; \quad Z_0 = 0.$$

$$690. f(z) = \frac{1}{(z-3)^2}; \quad Z_0 = 3. \quad 700. f(z) = \sin \frac{1}{z}; \quad Z_0 = 0.$$

4. (701-720) Berilgan integralni hisoblang.

701. $I = \int_{\Gamma} (x^2 + i \cdot y^2) dz$, bu erda $G: Z_0 = 1+i$ nuqta bilan $Z_1 = 2+3i$ nuqtani tutashtiruvchi tug'ri chiziq.

$$702. I = \oint_{|z|=2} \frac{e^z dz}{z^2 - 1}.$$

703. $I = \int_{\Gamma} (1+i - z \cdot \bar{z}) dz$, bu erda $\Gamma: y = x^2$ parabolaning

$z_0 = 0$ va $z_1 = 1+i$ nuqtalar oralig'idagi yoyi.

$$704. I = \oint_{|z-3|=6} \frac{z dz}{(z-2)^2(z+1)}.$$

$$705. I = \oint_{|z|=3} \frac{e^z \cos z dz}{z^2 + 2z}.$$

706. $I = \int_{\Gamma} (z\bar{z} - \bar{z}^2) dz$, bu erda $\Gamma: |z|=1$, $(-\pi \leq \arg z \leq 0)$.

707. $I = \int_{\Gamma} e^{z^2} \operatorname{Im} z dz$, bu erda $\Gamma: z_0 = 0$ va $z_1 = 1+i$

nuqtalarni tutashtiruvchi to'g'ri chiziq.

$$708. I = \oint_{|z-i|=1} \frac{\sin(\pi z) dz}{(z^2 - 1)^2}.$$

$$709. I = \oint_{|z|=2} \frac{\sin z \cdot \sin(z-1) dz}{z^2 + z}.$$

$$710. I = \oint_{|z|=3} \frac{z^2 dz}{z - 2z}.$$

711. $I = \int_{\Gamma} \frac{e^z}{(z^2 + 9)(z - \frac{1}{2})} dz$, bu yerda $\Gamma: x^2 + y^2 = 2x + 2y + 4$.

$$712. I = \oint_{|z-\frac{1}{2}|=1} \frac{\cos 2z dz}{(z-1)(z^2-1)}.$$

$$713. I = \int_{|z|=4} \frac{e^{2z}}{z^2 + 9} dz.$$

$$714. I = \int_{|z+5i|=2} \frac{e^{z^2+5z+6}}{(z^2+16)(z+4i)} dz.$$

$$715. I = \int_{|z-2|=2} \frac{\cos z}{(z-3)(z^2-9)} dz.$$

$$716. I = \int_{|z-i|=2} \frac{e^{\sin(2z^3+5)}}{(z^2+4)(z-2i)} dz.$$

$$717. I = \int_{|z-i|=2} \frac{\sin(e^{2z+3})}{(z^2-4)(z-2)} dz.$$

$$718. I = \int_{|z-8|=3} \frac{e^{z^2+4z}}{(z^2-49)(z-7)} dz.$$

$$719. I = \int_{|z+2|=2} \frac{3z^2 - 4z + 3}{(z^2 - 9)(z+3)} dz.$$

$$720. I = \int_{|z|=1} \frac{\sin(iz)}{z^2 - 4z + 3} dz.$$

Ehtimollar nazariyasi va matematik statistika
5.(721-740) Berilgan hodisalarning ehtimolini toping:

721. Talaba dasturdagi 60 savoldan 45 tasini biladi. Har bir imtihon bileyti uchta savoldan tashkil topgan. Quyidagi hodisalarning ehtimolini toping:

Talaba tushgan biletning:

- a) barcha uchta savolni biladi;
- b) faqat ikkita savolni biladi;
- v) faqat bitta savolni biladi.

722. Ikkita yashikning birida 5ta oq va ikkinchisida 10 ta qora shar bor. Birinchi yashikdan ikkinchisiga tavakkaliga bir shar olindi, so'ngra ikkinchi yashikdan tavakkaliga bir shar olindi. Olingan shar qora bo'lishligi ehtimolini toping.

723. Uchta mergan bir hil va bog'liqsiz sharoitda bitta mo'ljalga qarab bir martadan o'q uzishdi. Birinchi merganning mo'ljalga o'q tekkizish ehtimoli 0,9 ga, ikkinchisini 0,8 ga, uchinchisini esa, 0,7 ga teng. Quyidagi xodisalarining ehtimolini toping:

- a) faqat bir mergan mo'ljalga o'q tekkizdi;
- b) faqat ikkita mergan mo'ljalga o'q tekkizdi;
- v) uchta mergan ham mo'ljalga o'q tekkizdi.

724. Bir hil va bog'liqsiz tajribalarning har birida hodisaning ro'y berish ehtimoli 0,8 ga teng. 1600 tajribada hodisa 1200 marta ro'y berish ehtimolini toping.

725. Avariya ro'y berishini bildirish uchun bir-biridan bog'liq bo'lmagan holda ishlovchi uchta qurilma o'rnatilgan. Avariya vaqtida birinchi qurilma ishga tushishining ehtimoli 0,9 ga, ikkinchi qurilma ishga tushishining ehtimoli 0,95ga va uchinchisining ehtimoli 0,85 ga teng. Quyidagi hodisalarining ehtimolni topilsin: - avariya vaqtida:

- a) faqat bitta qurilma ishga tushishi.
- b) faqat ikkita qurilma ishga tushishi.
- v) barcha qurilmalar ishga tushishi.

726. Bir xil va bog'liqsiz tajribalarning har birida hodisaning ro'y berish ehtimoli 0,02 ga teng. 150 ta tajriba o'tkazilganda hodisa 5 marta ro'y berish ehtimolini toping.

727. 1000 dona tovarda 10 ta yaroqsiz tovar uchraydi. Shu 1000 dona tovardan tavakkaliga 50 dona olinganda ularning rosa 3 donasi yaroqsiz bo'lishligi ehtimolini toping.

728. Bir xil va bog'liqsiz tajribalarning xar birida hodisaning ro'y berish ehtimoli 0,8 ga teng. 125 ta tajriba o'tkazilganda

hodisa 75 dan kam bo'lmagan va 90 dan ko'p bo'lmagan marta ro'y berish ehtimolini toping.

729. Uchta dastgohda bir xil va bog'liqsiz sharoitda bir turli detal tayyorlanadi. Birinchi dastgohda 10%, ikkinchisida 30% va uchinchisida 60% detal tayyorlanadi. Har bir detalning yaroqli bo'lib tayyorlanish ehtimoli: birinchi dastgohda 0,7 ga, ikkinchisida 0,8 ga va uchinchisida 0,9 ga teng. Barcha tayyorlangan detallardan tavakkaliga olingan detalning yaroqli bo'lishi ehtimolini toping.

730. Aka-uka har biri 12 kishidan iborat ikkita sport komandasiga qatnashadilar. Ikki yashikda 1 dan 12 gacha nomerlangan 12 ta bilet bor. Har bir komanda a'zolari tavakkaliga bittadan biletni aniq bir yashikdan olishadi. Olingan bilet yashik qaytarilmaydi. Ikkala aka-ukaning 6- nomerli bilet olishligi ehtimolni topilsin.

731. Uchta quroldan bir vaqtida mo'ljalga qarab o'q uzishdi. Bir otishda mo'ljalga tekkizish ehtimoli birinchi qurol uchun 0,8 ga, ikkinchisiga 0,7 ga va uchinchisiga esa, 0,9 ga teng. Quyidagi hodisalarining ehtimolini toping:

- a) faqat bir o'qning mo'ljalga tegishi;
- b) faqat ikkita o'qning mo'ljalga tegishi;
- v) barcha uchta o'qning mo'ljalga tegishi;
- g) hech bo'lmaganda bir o'qning mo'ljalga tegishi.

732. Uch mergan bir vaqtida mo'ljalga o'q uzishdi. Mo'ljalga o'q tekkizish ehtimoli birinchi mergan uchun 0,7 ga, ikkinchisiga 0,8 ga, uchinchisiga esa 0,9 ga teng. Quyidagi hodisalarining ehtimolni toping:

- a) faqat bir mergan mo'ljalga o'q tekkizishi;
- b) faqat ikki mergan mo'ljalga o'q tekkizishi;
- v) barcha uchta mergan mo'ljalga o'q tekkizishi;
- g) hech bo'lmaganda bitta mergan mo'ljalga o'q tekkizishi.

733. Talaba dasturning 60 ta savoldan 50 tasini biladi. Imtihon bileyti 3 ta savoldan iborat. Quyidagi hodisalarining ehtimolini toping: Talaba:

- a) faqat ikkita savolni biladi;
- b) uchta savolni biladi;
- v) hech bo'lmaganda bitta savolni biladi.

734. Har biri 10 sportchidan iborat ikki komanda musobaqa qatnashchilariga nomer berish uchun qurra tashlashmoqda. Ikki aka-uka turli komandalarning a'zosidirlar. Aka-ukaning ikkalasi ham musobaqada 5- nomer bilan qatnashish ehtimolini toping.

735. Ikki mengan mo'ljalga bittadan o'q uzishdi. Har bir menganning mo'ljalga o'q tekkizish ehtimoli 0,8 ga teng. Quyidagi hodisalarining ehtimolini toping:

- a) ikkala mengan mo'ljalga o'q tekkizishdi;
- b) ikkala mengan mo'ljalga o'q tekkizishmadi;
- v) hech bo'limganda bir mengan mo'ljalga o'q tekkizdi.

736. Ikki o'q otishda hech bo'limganda bir marta mo'ljalga o'q tekkizish ehtimoli 0,96 ga teng. To'rt marta o'q otishda uch marta mo'ljalga o'q tekkizish ehtimolini toping.

737. Nashriyot ikkita aloqa bo'limiga gazetalar yuboradi. O'z vaqtida gazeta etib borishi ehtimoli har bir aloqa bo'limi uchun 0,9 ga teng. Quyidagi hodisalarining ehtimolini toping:

- a) ikkala aloqa bo'limiga o'z vaqtida gazeta etib borishi;
- b) faqat bir aloqa bo'limiga o'z vaqtida gazeta etib borishi;
- v) hech bo'limganda bitta aloqa bo'limiga o'z vaqtida gazeta etib borishi.

738. Ikkita yashikning har birida 2 ta qora va 8 ta oq shar bor. Birinchi yashikdan tavakkaliga bir shar olinib, ikkinchi yashikka solindi. So'ngra ikkinchi yashikdan bir shar olindi. Ikkinchchi yashikdan olingan shar oq bo'lislighining ehtimolini toping.

739. Ikkita harf teruvchilar bir xil hajmda harf terdilar. Birinchi harf teruvchi xatoga yo'l qo'yishining ehtimoli 0,051 ga teng, ikkinchisi xatoga yo'l qo'yishining ehtimoli 0,1 ga teng. Terilgan harflar tekshirilganda xato topishdi. Bu xatoga birinchi harf teruvchi yo'l qo'yganligning ehtimolini toping.

740. Bog'ligsiz tajribalarning har birida hodisaning ro'y berishi ehtimoli 0,8 ga teng. 100 ta tajriba o'tkazilganda hodisaning 70 dan kam bo'limgan va 80 dan ortiq bo'limgan marta ro'y berishligning ehtimolini toping.

6. (741-760) Diskret tasodifiy miqdor X faqat ikkita x_1 va x_2 , qiyomat qabul qiladi va $x_1 < x_2$. X ning x_1 qiyomatini qabul qilish

ehtimoli p_i ma'lum, matematik kutilmasi $M(X)$ va dispersiyasi $D(X)$ ma'lum. Bu tasodifiy miqdorming taqsimat qonunini toping.

N _o	P _i	M(X)	D(X)	N _o	P _i	M(X)	D(X)
741	0,1	1,9	0,09	751	0,2	5,8	0,16
742	0,2	2,8	0,16	752	0,3	6,7	0,21
743	0,3	3,7	0,21	753	0,4	7,6	0,24
744	0,4	4,6	0,24	754	0,5	8,5	0,25
745	0,5	5,5	0,25	755	0,6	9,4	0,24
746	0,6	6,4	0,24	756	0,7	10,3	0,21
747	0,7	7,3	0,21	757	0,8	11,2	0,16
748	0,8	8,2	0,16	758	0,9	12,1	0,09
749	0,9	9,1	0,09	759	1,0	13,0	0,36
750	0,1	4,9	0,09	760	0,2	3,8	0,16

7. (761-780) X – tasodifiy miqdor o'zining taqsimat funksiyasi $F(x)$ bilan berilgan. Uning zichlik funksiyasi, matematik kutilmasi va dispersiyasi topilsin. Taqsimat va zichlik funksiyalarining grafigi chizilsin.

$$761. F(x)=\begin{cases} 0 & \text{agar } x \leq 0 \\ x^2 & \text{agar } 0 < x \leq 1 \\ 1 & \text{agar } x > 1 \end{cases}$$

$$762. F(x)=\begin{cases} \frac{1}{10}(3x^2 + x - 4) & \text{agar } 1 < x \leq 2 \\ 1 & \text{agar } x > 2 \end{cases}$$

$$763. F(x)=\begin{cases} 5x+1 & \text{agar } -0,2 < x \leq 0 \\ 1 & \text{agar } x > 0 \end{cases}$$

$$764. F(x)=\begin{cases} 0 & \text{agar } x \leq -\pi \\ \sqrt{2} \cos \frac{x}{2} & \text{agar } -\pi < x \leq \frac{\pi}{2} \\ 1 & \text{agar } x > \frac{\pi}{2} \end{cases}$$

$$765. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ \frac{\sqrt{x}}{2} & \text{agar } 0 < x \leq 4 \\ 1 & \text{agar } x > 4 \end{cases}$$

$$766. F(x) = \begin{cases} 0 & \text{agar } x \leq 4 \\ \ln \frac{x}{2} & \text{agar } 4 < x \leq 4e \\ 1 & \text{agar } x > 4e \end{cases}$$

$$767. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ \frac{1}{3}(2x^2 + x) & \text{agar } 0 < x \leq 1 \\ 1 & \text{agar } x > 1 \end{cases}$$

$$768. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ \frac{1}{2}(x^3 + x) & \text{agar } 0 < x \leq 1 \\ 1 & \text{agar } x > 1 \end{cases}$$

$$769. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ 3x^2 + 2x & \text{agar } 0 < x \leq \frac{1}{3} \\ 1 & \text{agar } x > \frac{1}{3} \end{cases}$$

$$770. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ 2\sin x & \text{agar } 0 < x \leq \frac{\pi}{6} \\ 1 & \text{agar } x > \frac{\pi}{6} \end{cases}$$

$$771. F(x) = \begin{cases} 0 & \text{agar } x \leq 1 \\ \frac{1}{6}(x^3 + 3x - 4) & \text{agar } 1 < x \leq 2 \\ 1 & \text{agar } x > 2 \end{cases}$$

$$772. F(x) = \begin{cases} 0 & \text{agar } x \leq \frac{1}{3} \\ \frac{1}{5}(3x - 1) & \text{agar } \frac{1}{3} < x \leq 2 \\ 1 & \text{agar } x > 2 \end{cases}$$

$$773. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ x^3 & \text{agar } 0 < x \leq 1 \\ 1 & \text{agar } x > 1 \end{cases}$$

$$774. F(x) = \begin{cases} 0 & \text{agar } x \leq -1 \\ \sqrt{x+1} & \text{agar } -1 < x \leq 0 \\ 1 & \text{agar } x > 0 \end{cases}$$

$$775. F(x) = \begin{cases} 0 & \text{agar } x \leq 3 \\ \ln \frac{x}{3} & \text{agar } 3 < x \leq 3e \\ 1 & \text{agar } x > 3e \end{cases}$$

$$776. F(x) = \begin{cases} 0 & \text{agar } x \leq \frac{3\pi}{4} \\ \cos 2x & \text{agar } \frac{3\pi}{4} < x \leq \pi \\ 1 & \text{agar } x > \pi \end{cases}$$

$$777. F(x) = \begin{cases} 0 & \text{agar } x \leq -1 \\ x^2 & \text{agar } -1 < x \leq 1 \\ 1 & \text{agar } x > 1 \end{cases}$$

$$778. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ \frac{x^2}{9} & \text{agar } 0 < x \leq 3 \\ 1 & \text{agar } x > 3 \end{cases}$$

$$779. F(x) = \begin{cases} 0 & \text{agar } x \leq 0 \\ \frac{1}{4}(x^3 - 2x) & \text{agar } 0 < x \leq 2 \\ 1 & \text{agar } x > 2 \end{cases}$$

$$780. F(x) = \begin{cases} 0 & \text{agar } x \leq 2 \\ \frac{1}{2}(x^2 - 3x) & \text{agar } 2 < x \leq 3 \\ 1 & \text{agar } x > 3 \end{cases}$$

8. (781-800) Normal taqsimlangan X-tasodifiy miqdorning matematik kutilmasi a va o'rtacha kvadratik chetlashishi σ -lar berilgan. Bu tasodifiy miqdorning berilgan $(\alpha; \beta)$ intervalga tushishligining ehtimolini toping:

N _o	a	σ	α	β	N _o	a	σ	α	β
781	2	6	4	9	791	12	4	7	18
782	3	2	3	10	792	13	5	9	18
783	4	2	2	10	793	14	9	11	17
